# SUCO Robert Scheuffele GmbH & Co. KG

A pressure monitoring specialist setting standards on the global stage

SUCO Robert Scheuffele GmbH & Co. KG was founded in 1938 and has established itself across the globe under the trade name SUCO. The two main product groups, pressure monitoring (mechanical pressure switches, vacuum switches, electronic pressure switches and pressure transmitters) and transmission technology (centrifugal clutches and brakes, electromagnetic clutches and brakes), as well as descent devices with centrifugal technology, are developed, designed and manufactured at the Bietigheim-Bissingen site, approximately 20 km north of Stuttgart in Germany.

Peter Stabel, Director

Marcell Kempf, Director

## Highest quality in all areas

The development and continual expansion of the company premises are indications of a thriving company.

Work on global presence has been rigorous, and today SUCO is actively represented by distribution companies in France (SUCO VSE France – a 50/50 joint venture with VSE Volumentchnik GmbH) and in the USA (SUCO Technologies Inc.), by associate company ESI Technology Ltd in Wrexham, North Wales, and by more than 50 mostly exclusive sales partners in over 60 countries.

Certified according to DIN EN ISO 9001:2015, SUCO has retained its consistently high quality standards for many years, something substantiated by numerous audits by reputable companies from a broad diversity of industry sectors.

This worldwide acknowledged product quality is guaranteed with CNC-controlled machining centres, automated assembly machines, sophisticated test systems and the latest in measuring equipment. Outstanding products, high level of customer service and excellent price/performance ratio guarantee SUCO good market positioning within the product sectors mentioned.

A sophisticated level of personnel qualification, a high identification of the employees with the company, process-oriented structures and efficient organisation are guarantees for continued company growth into the future.

Observance of ethical principles and comprehensive environmental awareness are standard at SUCO and guarantee business relationships on the highest level for our customers all over the world.

This catalogue does not only give a clear and structured overview of our capabilities all around our comprehensive range of pressure monitoring products but also offers detailed technical explanations supporting you in many challenges occurring in your specific applications.

**Please trust in a company with more than 80 years of experience.**

# SUCO – A success story

From a mechanical workshop to an industrial company operating on the global stage

**1938**

Robert Scheuffele starts up a mechanics workshop

**1945**

Start of the partnership between Robert Scheuffele and Georg Fuhrmann

\* 16.10.1909 † 20.02.1966 \* 15.01.1912 † 04.02.1982

**1946**

Start of production of centrifugal clutches and brakes

**1953**

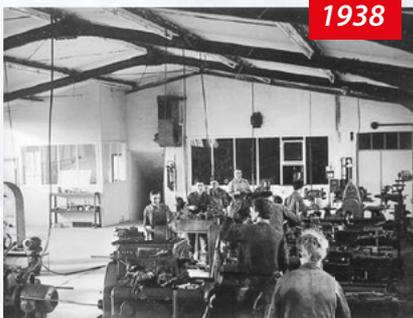

Move into the new premises in Bietigheim-Bissingen, Keplerstrasse (still headquarter today)

**1956**

Registration of trade name SUCO with worldwide trademark protection

**1960**

Start of production of mechanical pressure switches for the automotive industry

**1938**

A view into production

**1970**

Administration building, Bietigheim-Bissingen

**1989**

Aerial shot of premises, Bietigheim-Bissingen

**1997**

First DIN ISO 9001 company certification

**1998**

Start of market penetration in Asia with set-up of a company pool

Broadening of product expertise to electronic pressure monitoring

Start of the „fully automatic pressure switch adjusting“ development project with the Fraunhofer Institute

**1999**

Founding of subsidiary SUCO VSE France

**2001**

Certification to DIN ISO 9001:2000

**2002**

Penetration of the markets in South America and Eastern Europe

**2004**

Start of development of fully automatic assembly systems for pressure switch modules

**2005**

New company name: SUCO Robert Scheuffele GmbH & Co. KG

Development of the SUCO zero clutch

**1969**

Start of production of electromagnet clutches and brakes

Set-up of a pan-European sales network

**1979**

Further development of SUCO pressure switches especially for hydraulic and pneumatic applications

Strategic alignment to the industry

**1980**

Development of the hex 24 pressure switch series for broad industrial applications

**1984**

Development of the hex 27 pressure switch series for broad industrial applications

**1987**

Broadening of the product range to include custom pre-wired pressure switches

**1988**

Start of sales in the US

**1993**

Development of pressure dampers for ABS brake systems in the automotive industry

**1999**

SUCO VSE France  
Le Mans, France

**2007**

SUCO Technologies  
Boca Raton, USA

**2009**

ESI Technology,  
Wrexham, UK

**2018**

Aerial shot of premises,  
Bietigheim-Bissingen

**2006**

Development and production start of descenders with centrifugal technology

Enhancement of the laboratory test facility for simulating several million test cycles under different test conditions

Development of the world's smallest pressure switch with adjustable switching point to 400 bar (patented)

**2007**

Founding of subsidiary SUCO Technologies Inc., USA

**2009**

Acquisition of ESI Technology Ltd. (UK)

**2010**

Across-the-board use of enhanced automatic pressure switch adjusters

Development of a transmitter series based on SoS technology

**2011**

Development of the SUCO thermal brake

**2013**

75-year company anniversary celebrations

**2014**

Development of the PLUS series with additional intelligent functions

**2017**

Certification to DIN ISO 9001:2015

# Tradition and Innovation

The preservation of proven traditions and continuous efforts in innovation enable visions to become successful reality

Design and development of new products using the latest CAD tools.

Products are subjected to comprehensive testing and measurements to simulate realistic ambient conditions and loads.

Assembly and test of pressure switches on semi and fully automated installations.

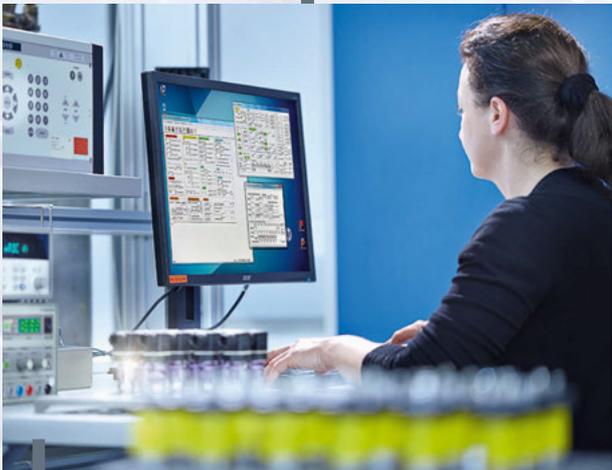

Fully automated switching point adjustment with computer-aided documentation of readings.

Ultra-modern production facilities with integrated, fully automated component handling for high efficiency.

Encapsulating system for custom ready-wired pressure switches for strictest requirements of IP protection class.

State of the art measuring and test methods for assembly and alignment of our electronic products.

Product final inspection with ultra-modern computer-aided test systems.

# General technical explanations

## User information

Our pressure monitoring products may only be installed and started up by authorised specialists. The safety regulations of country-specific authorities must be observed, especially when working with mains voltages and oxygen, and in potentially explosive areas.

## Product information

The technical information in this catalogue is based upon fundamental testing during product development and empirical values. The information cannot be used for all application scenarios.

Testing of the suitability of our products for a specific application (such as the checking of material compatibilities) remains the responsibility of the user. It may be the case that suitability can only be verified by appropriate field testing.

## Mounting position

For mechanical and electronic pressure switches as well as transmitters there is no limitation due to the mounting position with regard to the accuracy of the pressure measurement.

However, other boundary conditions of the application may require a certain mounting position, e. g. horizontal installation to avoid waterlogging on the electrical connection or vertical installation to prevent debris from accumulating in the bore of the pressure connection.

## IP protection class

The IP protection class is a defined protection level code (sealing) of electrical equipment housings in line with IEC 60529 (formerly DIN 40050 – Part 2). Protection of a housing against the following is tested here:

- The penetration of solid extraneous particles, such as dust
- Access of hazardous parts
- Penetration of water

IP protection tests are performed as type tests.

The IP protection type code, made up of two digits, specifies the protection of a housing against the penetration of solid extraneous particles and water.

The numeric code therefore provides conclusions to be drawn on the level of personal safety as well as the functional protection / mid to longterm functional reliability of electrical equipment.

## Protection types IP00, IP65, IP67 and IP6K9K

### IP00:

No protection against penetration of solid particles or water, no protection against contact.

### IP6X:

Protection against penetration of dust (dust proof). Full contact protection.

### IPX5:

A jet of water from a nozzle, aimed at equipment (such as a pressure switch) from all directions, must not have any harmful effect.

### IPX7:

Protection from water, when equipment (such as a pressure switch) is immersed in water under defined pressure and time conditions. Water must not penetrate into the equipment in harmful quantities.

### IP6K9K:

Devices satisfying these requirements must be dust-proof and be able to withstand loads during the use of high-pressure cleaners and steam jets. The standard stipulates a water pressure from 80 to 100 bar at a temperature of 80 °C for testing.

### IP6KX:

Dust must not penetrate. Letter K: Specific to the electrical equipment of road vehicles.

### IPX9K:

Protection against penetration of water at high pressure / for steam jet cleaning. Water aimed at the housing from every direction at greatly increased pressure may not have any damaging effects.

**We are able to offer IP67 / IP6K9K for many of our mechanical and electronic pressure switches (pre-wired or with integrated connector) and for our transmitters.**

**IP67 / IP6K9K is the recommended protection for mobile hydraulics and any equipment exposed to the outdoor environment.**

## Cylindrical threads

Cylindrical threads are either sealed on the front by underlaying an appropriate sealing ring (such as a copper sealing ring) or by already having integrated O-rings or gaskets.

If the corresponding thread types do not provide specifications regarding the roughness of the counter sealing surface, we recommend the following values:

$$R_{\text{amax}} 1.6 \mid R_{\text{max}} 6.3 \mid R_{\text{mr}} (-0.10) > 5\% C_{\text{rel}} 5\%$$

## Conical threads (cone-shaped threads)

Conical threads guarantee tolerance compensation of the two threaded parts. The sealing function is realised with thread flanks which deform permanently and enter into a metallic frictional fit. Conical threads are not screwed in down to the screw-in depth, but fixed with the tightening torque required for the leak tightness.

Remember not to exceed the permitted tightening torque of the pressure switch or transmitter presented in the following table (to prevent damaging the threaded pin beforehand, causing it to become untight during operation or to snap off when tightened).

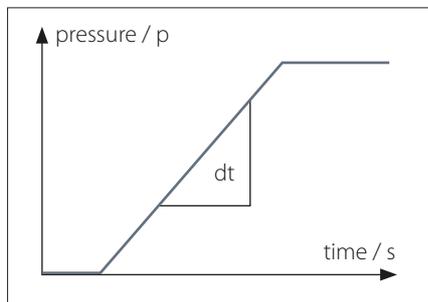

## Tightening torques of steel threads

The specifications below are to be understood upper material thresholds for the housing of pressure switches or transmitters. Remember during installation that the type and material of the seal, the condition of mating surfaces (e.g. dry or oily) and the material of the counter-piece all have a bearing on the tightening torque.

Threads M10, G 1/8, R 1/8 and NPT 1/8 are limited to overpressure strengths of up to 600 bar.

**Values 30% lower than in the following table must be used for brass housings.**

Thread	Tightening torque
NPT 1/8; M 10 x 1 conical	max. 18 Nm
M 10 x 1 cyl.; G 1/8	max. 20 Nm
M 12 x 1.5; 7/16 – 20 UNF	max. 30 Nm
G 1/4; 9/16 – 18 UNF	max. 40 Nm
NPT 1/4; M 14 x 1.5	max. 40 Nm

### Gaseous applications

In particular using additional sealant to attain the required leak tightness may be necessary for gas applications.

### Plasma cleaning for oxygen applications

When pressure switches/transmitters are used with oxygen, the surfaces must be free of oil and grease residues to prevent spontaneous combustion. Special requirements must also be observed for oxygen applications with regard to the material selection of housings and seals as well as the permitted operating pressure (see also page 17). We would be pleased to advise you if necessary.

For these operating conditions, we offer plasma cleaning of the components in order to achieve the required elimination of oil and grease. The components are packed and sealed in plastic bags. The packaging is marked with safety instructions for use in oxygen applications.

### Plasma cleaning LABS-free (PWIS-free)

Our products are always manufactured without the use of substances that interfere with the wetting of the paint throughout the entire manufacturing process. For use in LABS-free applications, we offer plasma cleaning of the components. The components are packed and sealed in plastic bags. The packaging is marked with safety instructions for use in LABS applications.

### Vacuum

The values given in the technical details for the vacuum range are specified in millibars (mbar) below atmospheric pressure.

### Pressure change rate (~rise / ~fall)

The pressure change rate denotes the pressure over time for the rising/falling pressure. It is specified in bar/s.

The maximum pressure change rate for mechanical pressure switches is 1,000 bar/s. For SUCO electronic pressure monitoring products the maximum pressure change rate can be up to 5,000 bar/s.

### Overpressure protection

The specified overpressure protection in the catalogue is based on a static pressure. The values refer to the hydraulic or pneumatic part of the switch.

It is best practice to use 30 - 50% lower values for dynamic pressure compared to static pressure. These empirical values are based on the knowledge that, in pressure systems, unexpected pressure peaks which are higher than the working pressure are generated as a result of activation of valves, sudden falling or rising load or simply the change of cross-sections in the pipes. With conventional measurement techniques (such as manometers), these pressure peaks are hardly measurable. Faster measurement systems must therefore be used for this data acquisition. Attempts are being made to take this into account by using empirical or corrective factors.

If the pressure conditions are known and the pressure change rates are 100 bar/s, our pressure switches and transmitters can be used up to the permitted overpressure protection as per data sheet / catalogue. Only 50 % of the specified overpressure protection is permitted when operating at the maximum permitted pressure change rate of  $\leq 1,000$  bar/s for mechanical pressure switches, and at  $\leq 5,000$  bar/s for transmitters.

### RoHS-Compliance

= Restriction of Hazardous Substances (Directives 2011/65/EU and 2020/863/EU)

### CE-Mark

= Communauté Européenne

European Parliament and Council directives must be observed when products are launched onto the market. If a directive exists for a product, it must be applied. Only products for which a directive exists may bear the CE mark.

**Only products which have been tested according to CE directive or corresponding standards may carry the CE mark.**

Mechanical pressure switches with a supply voltage above 50 VAC or 75 VDC are covered by the 2014/35/EU Low Voltage Directive. Variants for potentially explosive areas are covered in addition by the 2014/34/EU ATEX Product Directive.

Our electronic products satisfy EMC (Electromagnetic Compatibility) Directive 2014/30/EC. Mechanical pressure switches do not fall under the EMC Directive.

The Machinery Directive 2006/42/EC is not applicable, because our products are classed as components.

Our product designs are based upon „good engineering practise“ in line with Article 4, Paragraph 3 of the Pressure Equipment Directive (2014/68/EU), meaning neither a declaration of conformity may be issued nor a CE mark affixed.

The current product-specific EU declaration is available in the download area of our homepage:

[www.suco.de/en/downloads](http://www.suco.de/en/downloads)

Help in selecting a suitable pressure switch

from page 18

M.1

### M.1 Pressure and vacuum switches with integrated connector NC/NO, hex 24

from page 22

- Max. voltage up to 42 V
- Switching points: 0.1 – 150 bar or vacuum
- IP protection up to IP67 (IP6K9K)
- Available connectors:  
Deutsch DT04-2P, AMP Superseal 1.5°, Packard MetriPack 280°,  
Deutsch DT04-3P, AMP Junior Timer®, Bayonet DIN 72585 A1–2.1,  
M12x1 DIN EN 61076-2-D
- Housing materials: zinc-plated steel (CrVI-free), stainless steel or brass
- Types: 0110, 0111, 0112, 0113, 0114, 0115, 0116, 0117, 0118, 0119, 0120, 0121, 0122, 0123, 0124, 0125

M.2

### M.2 Pressure switches with integrated connector Changeover contacts, hex 27

from page 32

- Adjustable hysteresis
- Max. voltage up to 250 V
- Switching points: 0.3 – 200 bar
- IP protection up to IP67 (IP6K9K)
- Available connectors:  
TE AMP Superseal 1.5°, M12x1 DIN EN 61076-2-101A,  
Deutsch DT04-3P, DIN connector EN 175301
- Housing material: zinc-plated steel (CrVI-free), others on request
- Types: 0132, 0133, 0134, 0135, 0136, 0137, 0184, 0185, 0194, 0195

M.3

### M.3 Pressure switches NC/NO, hex 24

from page 40

- Max. voltage up to 42 V
- Switching points: 0.1 – 200 bar
- IP protection up to IP65 (IP00 terminals)
- Housing materials: zinc-plated steel (CrVI-free), stainless steel or brass
- Types: 0163, 0164, 0166, 0167, 0168, 0169

M.4

### M.4 Pressure switches Changeover contacts, hex 27

from page 52

- Adjustable hysteresis (apart from 0140 and 0141)
- Max. voltage up to 250 V
- Switching points: 0.3 – 400 bar
- IP protection up to IP65
- Housing materials: zinc-plated steel (CrVI-free) or stainless steel
- Types: 0140, 0141, 0170, 0171, 0180, 0181, 0183, 0186, 0187, 0190, 0191, 0196, 0197

**M.5 Ready-wired pressure switches, cabled and encapsulated individually to customer requirements** from page 62

- Numerous cable and connector variants
- IP protection up to IP67 (IP6K9K)
- Housing materials: zinc-plated steel (CrVI-free), stainless steel or brass
- Types: 0240, 0241
  - special feature: switching point adjustable on site even after assembly
- Technical characteristics for hex 24: see chapter M.3
- Technical characteristics for hex 27: see chapter M.4

**M.6 „PLUS“ – Pressure switches with integrated connector and intelligent supplementary functions, hex 24** from page 66

- Max. voltage dependent on custom function up to 42 V
- Numerous additional safety functions, such as:
  - diagnostic function („fail-safe“) according to NAMUR (resistor)
  - LED for visual check of switching status
  - Overvoltage / overload protection (varistor)
- Types: 0410, 0411, 0412, 0413, 0414, 0415, 0416, 0417, 0418, 0419, 0424, 0425

**M.7 Pressure switches Changeover contacts, 30 A/F** from page 74

- Square or block style
- Some with adjustable hysteresis
- Max. voltage up to 250 V
- Switching point adjustable 0.1 – 400 bar
- Housing material: aluminium
- Types: 0159, 0161, 0162, 0175
  - special feature: 0159 with knurled screw for simple adjustment of the switching point

**M.8 Pressure switches according to ATEX directive and IECEx scheme** from page 80

- Hex 27 for gas protection zones 1 + 2, dust protection zones 21 + 22 and mining M2
- 30 A/F for gas protection zones 1 + 2
- Housing material: zinc-plated steel (CrVI-free) or aluminium
- Types: 0165, 0340, 0341, 0342, 0343

**M.9 Vacuum switches NC/NO or Changeover contacts, hex 24 or 30 A/F** from page 86

- Max. voltage up to 250 V
- Overpressure protection up to 35 bar
- Housing material: brass or aluminium
- Types: 0150, 0151

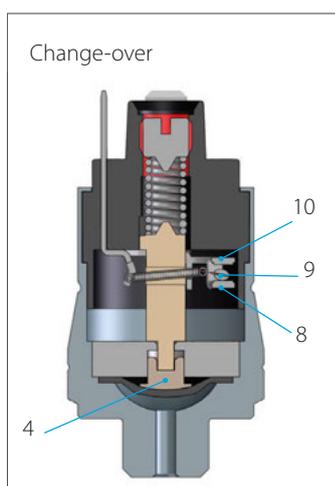

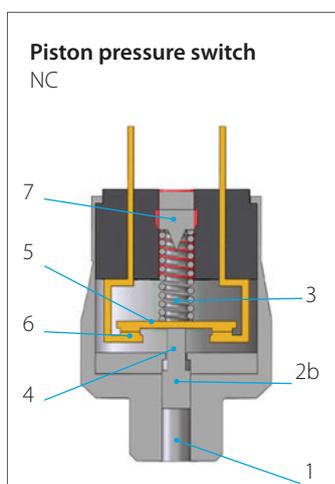

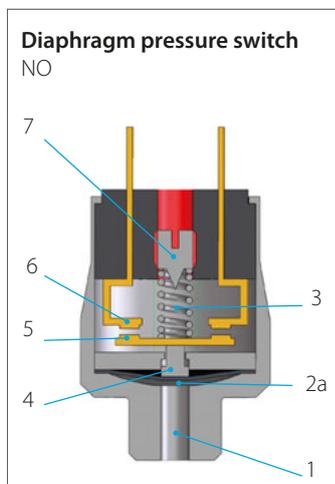

**M.10 Accessoires for mechanical pressure switches** from page 90

- Protective caps
- Socket devices
- Thread adapters
- Plugs with ready-to-use cables (for pressure switches with integrated connector)

# Technical explanations for mechanical pressure switches

## What is a mechanical pressure switch?

Mechanical pressure switches from SUCO monitor the pressure of liquid or gaseous media, and close or open an electrical circuit on reaching a set threshold.

## Diaphragm pressure switches

SUCO diaphragm pressure switches are used in pressure ranges from 0.1 bar to 100 bar, meaning overpressure safety of 35, 100, 300 / 400 and 600 / 700 bar, depending on the used diaphragm type.

## Piston pressure switches

Pressure ranges from 10 bar to 400 bar can be monitored with SUCO piston pressure switches (dependent on size); overpressure safety of up to 600 / 700 bar can be attained.

## Sizes of pressure switches

Mechanical pressure switches from SUCO can be divided into sizes hex 24, hex 27 and 30 A/F. Each particular size has specific hydraulic, pneumatic and electric properties (specified on the relevant catalogue page in the technical details).

## How does a pressure switch work?

Function description for **normally open (NO)**: Pressure is applied to the diaphragm (2a) / pistons (2b) through the pressure connector (1).

If the generated pressure force is greater than the force of the pre-tensioned pressure spring (3), the plunger (4) moves towards the counter-contact (6), carrying along the contact disc (5), and closes the circuit.

The switch opens again when the pressure is reduced by the hysteresis value.

Function description for **normally closed (NC)**: Engaging happens in the reverse order.

The adjustment screw (7) enables the switching point to be changed within the adjustment range.

The micro switch of a **change-over contact system** (snap-action) offers both, a NC and a NO contact.

The swivel contact (9) is activated by the plunger (4). The circuit is closed by the NC (8) as long as no pressure is applied.

When the applied pressure exceeds the set switching point, the swivel contact changes over and closes the circuit via the NO (10).

## Utilisation category

The utilisation category specifies for example voltages and currents, and the type of load, our pressure switches are designed for (according to DIN EN 60947-5-1).

## AC voltage

**AC12**: Control of ohmic loads and semiconductor loads in input circuits of opto-couplers (such as PLC inputs).

**AC14**: Control of electromagnetic loads, 72 VA.

## DC voltage

**DC12**: Control of ohmic loads and semiconductor loads in input circuits of opto-couplers (such as PLC inputs).

**DC13**: Control of electromagnets.

## B10d value

According to DIN EN ISO 13849-1, the B10d value specifies the anticipated service life (with a 10% probability of failure). The B10d value is therefore directly dependent on the respective application of the pressure switch. For ohmic loads and currents < 1 A, we specify the B10d value as 1 million cycles of electrical life.

The specification of a MTTF time (mean time to failure) is not possible without knowing the specific conditions in the application. However, the MTTF time can be determined easily from the B10d value:

$$MTTF_d = \frac{B_{10d}}{0,1 n_{op}}$$

$n_{op}$ : number of cycles per year

$B_{10d}$ : number of cycles until 10 % of components have failed.

## Minimum current / minimum working voltage

The minimum working current and minimum working voltage depend greatly on operating and ambient conditions. Physically, the build-up of impurity layers on the contact rivets must be countered with mechanical friction and/or electrical erosion.

### Classification of electrical switch functions

			Contact form DIN EN- 60947-5-1	Symbol IEC 60617
NO	NO, normally open	SPST single pole, single throw	X	
NC	NC, normally closed	SPST single pole, single throw	Y	
Change-over contacts	CO, change over (snap action)	SPDT single pole, double throw	C	

It has proven useful in many applications to deploy our pressure switches with silver contact rivets ensuring that they are fail safe to 10 mA and 10 V. Variants with gold contacts are available in our catalogue for even lower currents and voltages.

#### Potential-free – galvanically isolated

Mechanical pressure switches from SUCO are potential-free, i.e. no auxiliary energy is required. Also, there is no electrical contact between the individual, live parts and the housing.

#### Adjustment range of switching point

The pressure range, within which the switching point of a pressure switch can be set, is called adjustment range. The switching point corresponds to the pressure value at which the electric circuit is opened or closed by the pressure applied.

If no switching point is specified on order, the pressure switches are adjusted by approximately half the adjustment range at factory.

The setting ranges specified for the respective device series apply to increasing pressure. For switching points that are specified for falling pressure and are within the maximum value of the setting range minus the hysteresis, the next higher setting range must be selected (see also section „Hysteresis“).

#### Switching point tolerances

The switching point tolerances specified by us pertain to room temperature (RT) and condition as new.

The values can change as a result of temperature, ageing and deployment conditions.

It is not possible to specify generally applicable value for switching point tolerances over temperature as the medium has a significant influence on the sealing materials in the pressure switch.

Double the tolerance stated for RT and condition as new can be assumed as a typical magnitude for the tolerance over the entire temperature range.

Based on their design, piston switches may exhibit an increase in switching points due to storage (dry run, stick-slip effect). Following a short start phase, the switching points return to the value set at the factory.

Pressure change rates of > 1bar/s may have an effect on the switching point for diaphragm pressure switches.

The switching point (for rising pressure) and hysteresis increase, whilst the switch-back point (for falling pressure) sinks.

Also, the effect of the maximum (system) pressure on the switchback point (for falling pressure ramp) must be factored in for tolerance-critical applications. The higher the (system) pressure, the lower the resulting switch-back value.

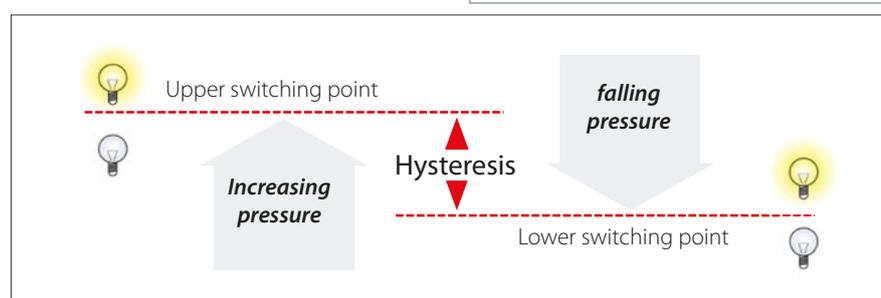

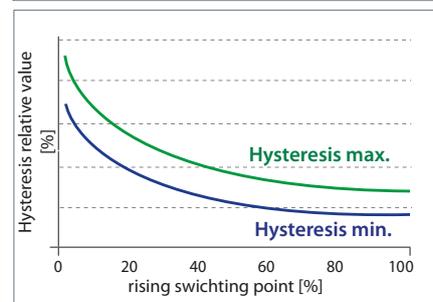

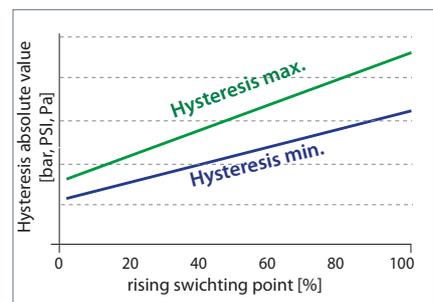

#### Hysteresis

##### Rising / falling switching point

The pressure difference between the rising (upper) and falling (lower) switching points (refer to the figure, e.g. NO) is known as hysteresis (switch-back difference).

Hysteresis has no constant value due to the structural layout of a mechanical pressure switch. In absolute values, the hysteresis is also the smallest with the smallest adjustment range. The hysteresis increases with increasing adjustment range.

##### Hysteresis over rising switching point

# Technical explanations for mechanical pressure switches

Hysteresis can be set at SUCO in range from approx. 10 % (at end of adjustment range) to 30 % or higher (at start of adjustment range), related to the respective switching point for hex 27 and 30 A/F pressure switches with adjustable hysteresis.

Due to their design, pressure switches with an overpressure resistance of 100 bar have smaller hystereses than the series with 300 bar or 400 bar overpressure resistance. Piston pressure switches have a slightly larger hysteresis than diaphragm pressure switches.

The specifications in the catalogue only represent typical average values. Please ask about the possible setting ranges you may require. Our electronic pressure switches are excellently suited to extremely low or high hysteresis. The lowest possible hysteresis is set if nothing is specified in the order.

## Switching frequency

The switching frequency provides information on the possible number of cycles in one minute. The value of 200/min specified by us is a guideline value. Higher switching frequencies can be attained depending on switch type and conditions of use.

## Sealing materials

The priority in sealing material selection is the chemical resistance. The temperature range only becomes a selection criterion when different sealing materials are suitable for the medium.

## NBR (Buna-N)

This is the standard material most commonly used. It is a special SUCO material mix with high level of cold flexibility so that the sealing properties of the pressure switch are also retained at low temperatures.

NBR is denoted by number „1“ in our order number.

## EPDM

This material is the solution of choice for applications with brake fluids. It is particularly suitable for applications with (process) water. Approval from the BAM (Federal Institute for Material Testing) is in place for oxygen applications.

The safety regulations from country-specific authorities must be observed for oxygen applications. EPDM may not come into contact with oil because this would entail swelling and softening of the material, and so failure of the pressure switch.

EPDM is denoted by number „2“ in our order number.

## EPDM-TW with drinking water approval

This EPDM material is intended for drinking water applications (up to max. 35 bar overpressure safety) according to Elastomer Guideline, WRAS (Water Regulation Advisory Scheme), ACS (Attestation de Conformité Sanitaire) and NSF 61 (National Sanitation Foundation) and for use in medical and pharmaceutical applications.

EPDM-TW may not come into contact with oil because this would entail swelling and softening of the material, and so failure of the pressure switch. Sealing is only available upon request, so please consult us before ordering.

EPDM-TW is denoted by number „5“ in our order number.

## FKM / FPM (Viton®)

This is a diaphragm material suitable for high temperature exposure and exhibits special chemical resistance. It has been tested in the hydraulic sector and has been proven to work successfully with critical oils. FKM / FPM is denoted by number „3“ in our order number.

## FFKM

This diaphragm material is suitable for temperature exposure up to 120°C and can withstand very aggressive conditions such as chemical species including organic or inorganic acids, diluted alkalis, ketones, esters, alcohols, fuels and hot water. FFKM is denoted by number „6“ in our order number.

## TPE (Thermoplastic elastomers)

This sealing material is available only for our electronical products of the Performance Series.

TPE offers similar media compatibility like NBR, e.g. suitable for mineral oil and hydraulic fluids.

Additionally the material can be used with diluted acids and bases and cold water, too.

TPE is denoted by number „7“ in our order number.

## ECO (epichlorhydrin)

ECO is only used in our vacuum switches. This material has similar properties to NBR in terms of chemical resistance, and can be used in gas applications as well as oil and fuel applications.

ECO is denoted by number „4“ in our order number.

## Silicone

Silicone is suitable for use within a wide temperature range. The SUCO silicone diaphragm is FDA-approved (Food & Drug Administration) for the food sector.

Silicone is a soft material reserved for sensitive applications in the low pressure range (below 10 bar) with maximum overpressure safety to 35 bar. Piston switches are therefore not offered with silicone seals. Silicone is also not suitable for oil applications.

Silicone is denoted by number „8“ in our order number.

## H-NBR

This is a special SUCO material mixture optimised for ester-based bio-oils. The multitude of bio-oils on the market means suitability of the material for the respective oil must be determined. This diaphragm material can also be used for a number of mineral and synthetic oils.

H-NBR is denoted by number „9“ in our order number.

## Medium compatibility

The specifications on medium compatibility in this catalogue cannot be generalised as they pertain to the sealing materials used in our pressure switches.

## Saturated and superheated steam applications

The sealing materials mentioned are not suitable for saturated or superheated steam applications.

### Conversion table for pressure units

Unit symbol	Unit name	Pa= N/m <sup>2</sup>	bar	Torr	lbf/in <sup>2</sup> , PSI
1 Pa = N/m <sup>2</sup>	Pascal	1	0.00001	0.0075	0.00014
1 bar	Bar	100 000	1	750.062	14.5
1 Torr = 1 mmHg	Millimetres, mercury column	133.322	0.00133	1	0.01934
1 lbf/in <sup>2</sup> = 1 PSI	Pound-force per square inch	6 894	0.06894	51.71	1

### Conversion table for temperature units

	K	°C	F
K	1	K - 273.15	9/5 K - 459.67
°C	°C + 273.15	1	9/5 °C + 32
F	5/9 (F + 459.67)	5/9 (F - 32)	1

#### Water applications

Standard piston switches are not suitable for water applications.

Pressure switches in stainless steel with EPDM seal have a special sealing system and can therefore also be used for water with corrosion protection, water mixtures or emulsions. The use of other fluid mixtures should be clarified with SUICO (e.g. swelling of EPDM sealing could happen by water – oil mixture).

Pressure switches with stainless steel housings with EPDM-TW diaphragm, SUICO type „5“ are designed for the use of drinking water.

#### Gas applications

Our pressure switches are suitable for liquid and gaseous media. Gaseous media place particular demands on leak-tightness however. The leakage rate is dependent on the respective gaseous medium, the working pressure and the permeability of the seal material used in the pressure switch.

Their lower leakage rates mean diaphragm pressure switches are better suited for gas pressures than piston pressure switches. The latter can also be used however if certain measures are taken (such as venting of the housing).

**For gaseous applications below 10 bar (145 PSI) in combination with pressure switches with high IP class, i.e. IP 67 and IP6K9K, in general we recommend to use ventilation. Please consult us; we are able to offer suitable solutions.**

#### Oxygen applications

Our mechanical pressure switches are suitable for use with oxygen. We recommend the use of our EPDM diaphragm. The resistance to internal burnout of the diaphragm has been tested by the BAM (Federal Institute for Material Testing).

Pressure switches with steel housings with zinc-nickel coating are, in conjunction with oxygen, only approved to a maximum working pressure of 10 bar.

Pressure switches with brass housings are, in conjunction with oxygen, only approved to a maximum working pressure of 35 bar.

Pressure switches with stainless steel housings are, in conjunction with oxygen, only approved to a maximum working pressure of 50 bar.

DGUV accident prevention regulations (such as DGUV 500, Section 2.32 and BGI 617) must be observed for first operation.

Please specify when ordering „oil and grease-free, for use with oxygen“.

#### Underpressure safety of pressure switches

Our pressure switches are underpressure safe down to 300 mbar (relative).

#### Overpressure safety of vacuum switches

Our vacuum switches are overpressure safe up to 20 or 35 bar depending on type.

#### cCSAus approval

Almost all of our mechanical pressure switches (sizes hex 24 and hex 27), and vacuum switch 0151, have cCSAus approval. The CSA mark together with „c“ and „us“ combines the control stamps for introduction onto the Canadian and American markets. The cCSAus certificate also includes the test of the relevant UL standard.

Checked by an official institution and verified with regular company visits by CSA inspectors, this approval guarantees the highest levels of quality and operational reliability for our products.

You can download the current cCSAus certificate on the download area of our homepage: <https://www.suco.de/en/downloads>

#### Product information

The technical information in this catalogue is based upon fundamental testing during product development, as well as upon empirical values. The information cannot be used for all application scenarios.

Testing of the suitability of our products for a specific application (e.g. also the checking of material compatibilities) rests under the responsibility of the user. It may be the case that suitability can only be guaranteed with appropriate field testing.

**Please consult us about gas, water and oxygen applications.**

**Subject to technical changes.**

# Pressure switches hex 24 with integrated connector

NC or NO, maximum operating voltage up to 42 V

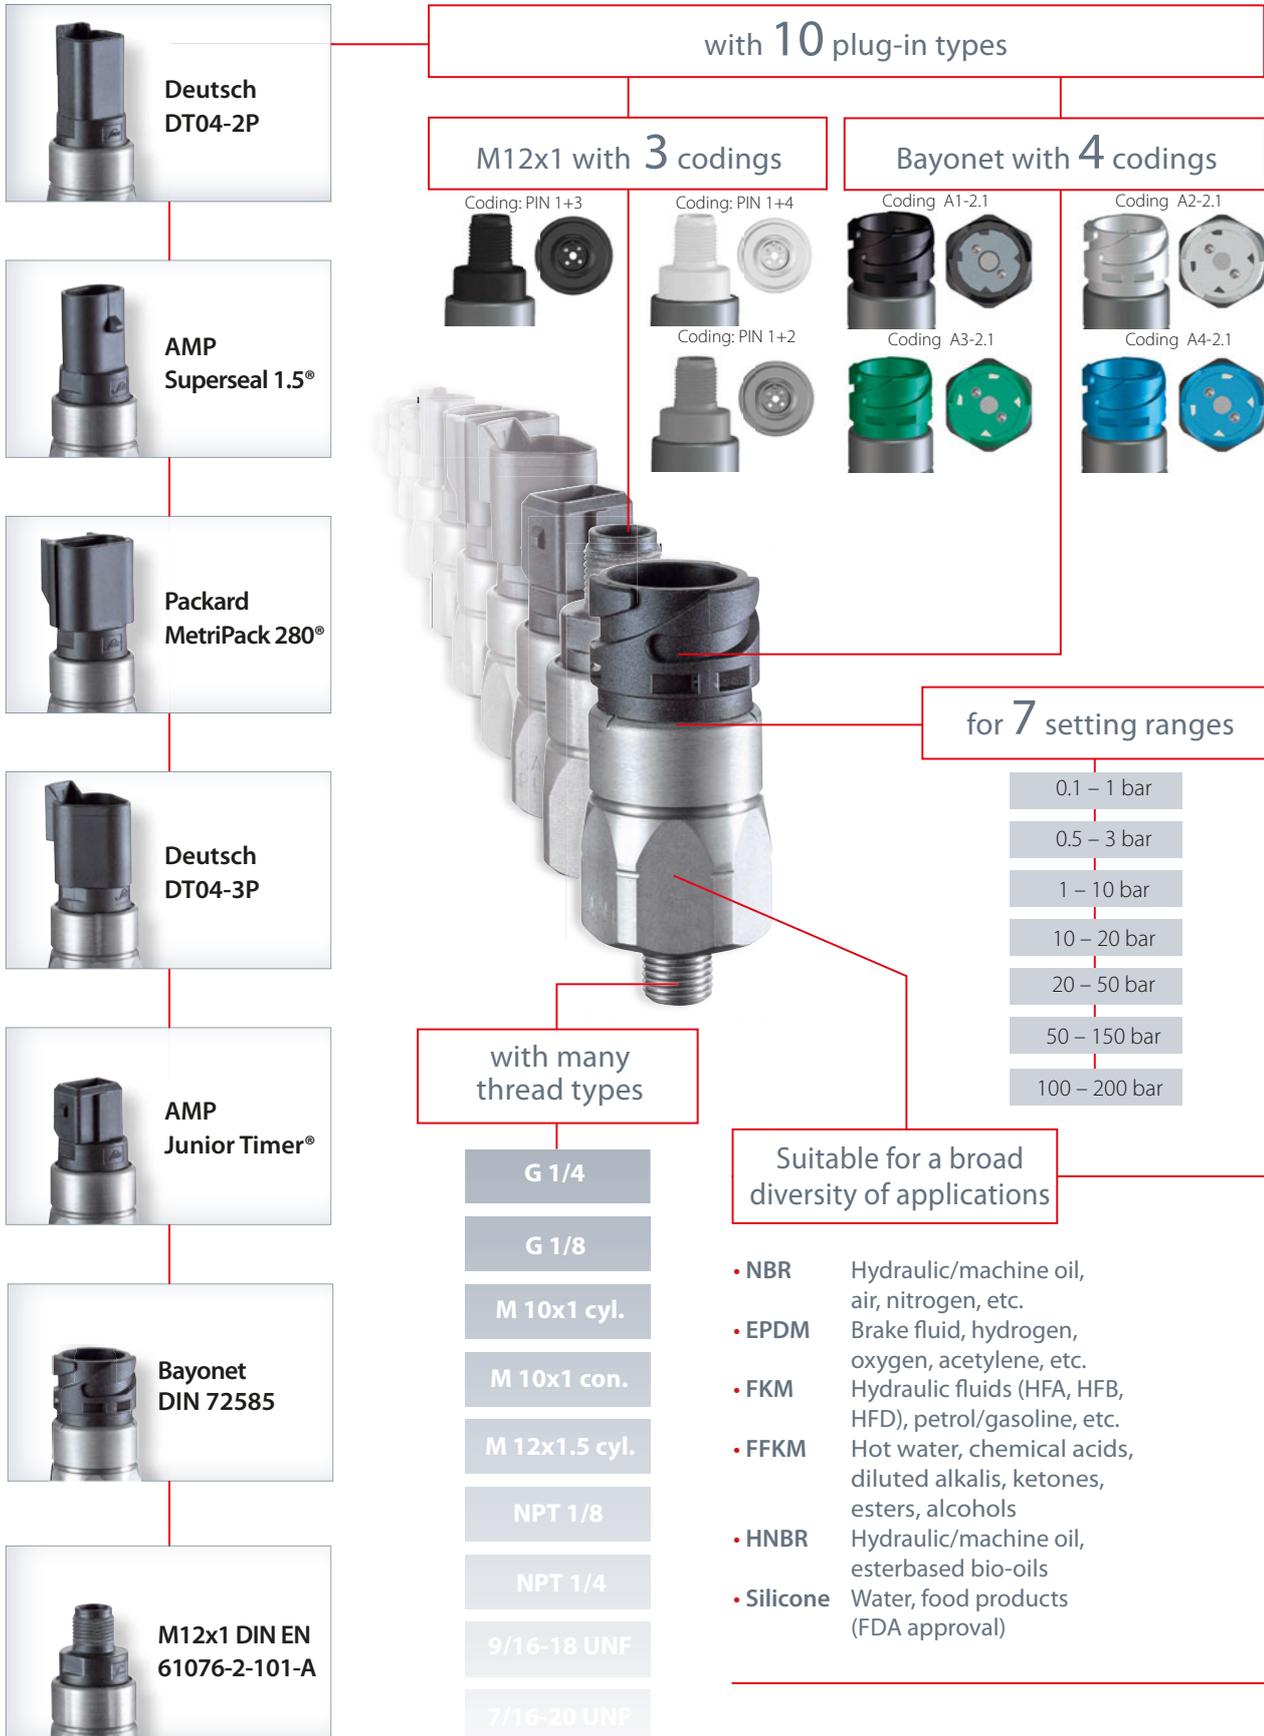

- Large selection of electrical plug-in types for quick attachment and reliable connection
- High protection class (to IP67 or IP6K9K)
- Compact and rugged design in industrial environments like construction and agricultural machinery or commercial vehicles
- Switching point can be set on site with adjusting screw in the connector<sup>1)</sup>
- High overpressure resistance, compact, small switches, available as normally open or normally closed
- Vacuum switches with integrated connector available on request

<sup>1)</sup> Pressure switches can also be supplied preset at factory.  
The switching point is embossed onto pressure switches preset at factory.

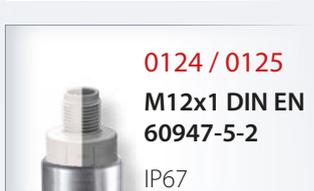

# The all-rounder with the broad selection of options

NC or NO, maximum operating voltage up to 42 V

# Pressure switches hex 24 with integrated connector

## Technical details

Rated working voltage:	10 ... 42 VAC/DC	
Rated current range (resistive load, DC12 / AC12):	10 mA ... 4 A	
Switching power DC12 / AC12:	100 W / 100 VA	
Temperature resistance of sealing materials:	NBR (diaphragm pressure switch)	-40 °C ... +100 °C
	NBR (piston pressure switch)	-30 °C ... +100 °C
	EPDM	-30 °C ... +120 °C
	FKM (diaphragm pressure switch)	-5 °C ... +120 °C
	FKM (piston pressure switch)	-15 °C ... +120 °C
	FFKM	-20 °C ... +120 °C
	Silicone	-40 °C ... +120 °C
HNBR	-30 °C ... +120 °C	
Burst pressure (diaphragm pressure switch):	400 bar	
Burst pressure (piston pressure switch):	700 bar (for threads M10, G 1/8, R 1/8 and NPT 1/8 up to max. 600 bar)	
Switching frequency:	200 / min	
Mechanical life expectancy:	1,000,000 cycles (for diaphragm pressure switches, life expectancy value only applies for switching pressures to max. 50 bar)	
Pressure rise rate:	≤ 1,000 bar/s	
Hysteresis:	Average value 5...30 % depending on type, not adjustable	
Vibration resistance:	10 g; 5...200 Hz sine wave, DIN EN 60068-2-6	
Shock resistance:	294 m/s <sup>2</sup> ; 14 ms half sine wave; DIN EN 60068-2-27	
Protection class:	Up to IP67 / IP6K9K according to manufacturer's specifications for the respective plug-in system only when plugged in, otherwise IP00	
Weight:	approx. 90 g

# Pressure switches hex 27 with integrated connector

Changeover switch with silver or gold contacts

- Large selection of electrical plug-in types for quick attachment and reliable connection
- Hysteresis adjustable at factory
- High protection class (to IP67 or IP6K9K)
- Compact and rugged design in industrial environments like construction and agricultural machinery or commercial vehicles
- Switching point can be set on site with adjusting screw<sup>1)</sup>
- Very high overpressure safety
- Corresponding mating plugs are available as accessories (please refer to page 34)

<sup>1)</sup> Pressure switches can also be supplied preset at factory.  
The switching point is embossed onto pressure switches preset at factory.

## Technical details

Types:	<b>0132-0137</b>	<b>0184 / 0185</b>	<b>0194 / 0195</b>
Rated working voltage:	10 ... 48 VAC/DC	10 ... 250 VAC/DC	5 ... 24 VDC
Rated current: (resistive load, DC12 / AC12)	10 mA ... 4 A	10 mA ... 4 A	3 ... 50 mA
Temperature resistance of sealing materials:	NBR (diaphragm pressure switch, p <sub>max</sub> = 400 bar)	-40 °C ... +100 °C	
	NBR (diaphragm pressure switch, p <sub>max</sub> = 100 bar) (piston pressure switch)	-30 °C ... +100 °C	
	EPDM	-30 °C ... +120 °C	
	FKM (diaphragm pressure switch)	-5 °C ... +120 °C	
	FKM (piston pressure switch)	-15 °C ... +120 °C	
	FFKM	-20 °C ... +120 °C	
	Silicone	-40 °C ... +120 °C	
	HNBR	-30 °C ... +120 °C	
Burst pressure (diaphragm pressure switch, overpressure resistance 100 bar)	200 bar		
Burst Pressure (diaphragm pressure switch, overpressure resistance 400 bar)	700 bar (for threads M10, G 1/8, R 1/8 and NPT 1/8 up to max. 600 bar)		
Burst pressure (Piston pressure switch)	1,000 bar (for threads M10, G 1/8, R 1/8 and NPT 1/8 up to max. 600 bar)		
Switching frequency:	200 / min		
Mechanical life expectancy:	1,000,000 cycles (for diaphragm pressure switches, life expectancy value only applies for switching pressures to max. 50 bar)		
Pressure rise rate:	≤ 1,000 bar/s		
Hysteresis: (can only be set at factory) <sup>1)</sup> :	Adjustable average value 10 ... 30 % depending on type		
Vibration resistance:	10 g; 5 ... 200 Hz sine wave; DIN EN 60068-2-6		
Shock resistance:	294 m/s <sup>2</sup> ; 14 ms half sine wave; DIN EN 60068-2-27		
Weight:	approx. 100 g	approx. 130 g	approx. 130 g

## 0132 / 0133 / 0134 / 0135 / 0136 / 0137

Diaphragm/piston pressure switches with integrated connector, maximum operating voltage up to 48 V

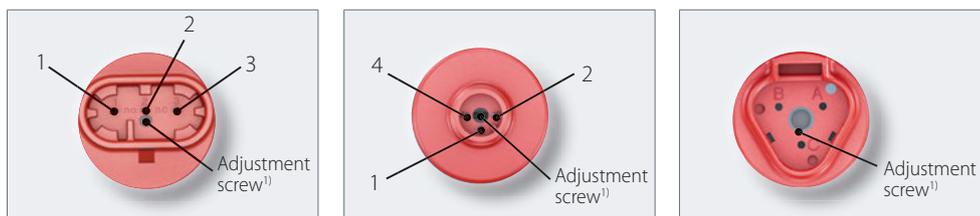

- Simple, quick and reliable electrical connection with easy-to-fit connectors
- Quick fitting with socket wrench (spanner)
- Changeover with silver contacts (gold contacts available as option)
- Hysteresis adjustable at factory
- Made of zinc-plated steel (CrVI-free, other housing materials available as option)

## Pressure switches hex 24

NC or NO, maximum voltage 42 V

- Most cost-effective solution for mechanical pressure monitoring
- Stable switching point even after long use and high load
- Switching point can be adjusted when fitted on site<sup>1)</sup>
- High pressure resistance, compact, small switches, available as normally closed (NC) or normally open (NO)
- For solutions with integrated connectors, please refer to chapter M.1, starting at page 22
- For customized and ready-wired pressure switches, please refer to chapter M.5, starting at page 62.

<sup>1)</sup> Pressure switches can also be supplied preset at factory. Our preset switches are sealed with lacquer paint, set points are embossed on the housing.

## Technical details

M.3  
hex 24

Rated working voltage:	10 ... 42 VAC/DC	
Rated current range (resistive load, DC12 / AC12):	10 mA ... 4 A	
Switching power DC12 / AC12:	100 W / 100 VA	
Temperature resistance of sealing materials:	NBR (diaphragm pressure switch)	-40 °C ... +100 °C
	NBR (piston pressure switch)	-30 °C ... +100 °C
	EPDM	-30 °C ... +120 °C
	EPDM-TW (diaphragm pressure switch)	-20 °C ... +100 °C
	FKM (diaphragm pressure switch)	-5 °C ... +120 °C
	FKM (piston pressure switch)	-15 °C ... +120 °C
	FFKM	-20 °C ... +120 °C
	Silicone (diaphragm pressure switch)	-40 °C ... +120 °C
HNBR	-30 °C ... +120 °C	
Burst pressure (diaphragm pressure switch):	400 bar	
Burst pressure (piston pressure switch)	700 bar (for threads M10, G 1/8, R 1/8 and NPT 1/8 up to max. 600 bar)	
Switching frequency:	200 / min	
Mechanical life expectancy:	1,000,000 cycles (for diaphragm pressure switches, life expectancy value only applies for switching pressures up to max. 50 bar)	
Pressure rise rate:	≤ 1,000 bar/s	
Hysteresis:	Average value 5 – 30 % depending on type, not adjustable	
Vibration resistance:	10 g; 5 ... 200 Hz sine wave; DIN EN 60068-2-6	
Shock resistance:	294 m/s <sup>2</sup> ; 14 ms half sine wave; DIN EN 60068-2-27	
Protection class:	IP65 with socket device, terminals IP00	
Weight:	approx. 90 g

### Seal material – Application areas

NBR	Hydraulic/machine oil, air, nitrogen, etc.	1
EPDM	Water, Brake fluid, hydrogen, oxygen, acetylene, etc.	2
EPDM-TW	Drinking water ( $p_{max} \leq 35$ bar)	5
FKM	Hydraulic fluids (HFA, HFB, HFD), petrol/gasoline, etc.	3
FFKM	Hot water, chemical acids, diluted alkalis, ketones, esters, alcohols	6
Silicone	Water, food products, air, etc. ( $p_{max} \leq 35$ bar)	8

Refer to page 41 for the temperature range and application thresholds of sealing materials.

Article number: **0167 - XXX XX - X - XXX**

<sup>1)</sup> Static value. Dynamic value is 30-50 % lower. Values pertain to the hydraulic/pneumatic part of the pressure switch.

# Pressure switches hex 27

Changeover with silver or gold contacts

- Switching point can be adjusted when fitted on site<sup>1)</sup>
- Factory adjustable hysteresis (except types 0140 and 0141)
- High overpressure safety and long service life under harsh conditions
- Operating voltage up to 250 V
- Series 0140 / 0141 with protective insulation
- For ready-wired customized versions refer to chapter M.5, starting at page 62
- For pressure switches with integrated connectors refer to chapter M.2, starting at page 32

<sup>1)</sup> Pressure switches can also be supplied preset at factory.  
Our preset switches are sealed with lacquer paint, set points are embossed on the housing.

## Technical details

M.4  
hex 27

Temperature resistance of sealing materials	NBR (diaphragm pressure switches, $p_{max} = 300 / 400$ bar)	-40 °C ... +100 °C
	NBR (diaphragm pressure switch, $p_{max} = 100$ bar) (piston pressure switch)	-30 °C ... +100 °C
	EPDM	-30 °C ... +120 °C
	EPDM-TW (diaphragm pressure switch)	-20 °C ... +100 °C
	FKM (diaphragm pressure switch)	-5 °C ... +120 °C
	FKM (piston pressure switch)	-15 °C ... +120 °C
	FFKM	-20 °C ... +120 °C
	Silicone (diaphragm pressure switch)	-40 °C ... +120 °C
HNBR	-30 °C ... +120 °C	
Burst pressure (diaphragm pressure switch, overpressure resistance 100 bar)	200 bar	
Burst Pressure (diaphragm pressure switch, overpressure resistance 400 bar)	700 bar (for threads M10, G 1/8, R 1/8, NPT 1/8 and type 0140 up to max. 600 bar)	
Burst pressure (Piston pressure switch)	1,000 bar (for threads M10, G 1/8, R 1/8, NPT 1/8 and type 0140 up to max. 600 bar)	
Switching frequency	200 / min	
Mechanical life expectancy	1,000,000 cycles (for diaphragm pressure switches, life expectancy value only applies for switching pressures to max. 50 bar)	
Pressure rise rate	≤ 1,000 bar/s	
Hysteresis (only adjustable at factory) <sup>1)</sup>	Adjustable average value 10 ... 30 % depending on type Types 0140 and 0141 cannot be adjusted	
Vibration resistance	10 g; 5 ... 200 Hz sine wave; DIN EN 60068-2-6	
Shock resistance	294 m/s <sup>2</sup> ; 14 ms half sine wave; DIN EN 60068-2-6, DIN EN 60068-2-29	
Protection class	IP65 with socket device, terminals IP00	
Weight	approx. 100 g

Ready-wired

# Hex 24 / hex 27 Ready-wired pressure switches

Custom designs

- Available with all commercial plug-in types and individual cable length.
- Technical details of ready-wired pressure switch types correspond to those of the same standard pressure switch types<sup>1)</sup>
- High protection classes IP67 or IP6K9K, required in particular in commercial vehicle construction, mobile hydraulics and similarly demanding applications
- With ready-wired pressure switches, the plug connections can be moved in climatically uncritical or low-vibration areas, if required.
- The modular layout also enables the production of lower volumes.
- The switching point is factory-set to a fixed value.<sup>2)</sup>

<sup>1)</sup> Different technical details will be agreed with the customer.

<sup>2)</sup> Exception: The switching point of 0240 / 0241 can be adjusted on site even after the sealing process.

# Hex 24 / hex 27

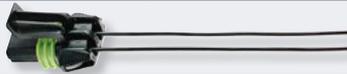

## Custom designs

All hex 24 and hex 27 pressure switches can be individually wired according to customer needs.

## 0240 / 0241

Diaphragm / piston pressure switches, hex 27

### Technical details

Refer to page 54 for electrical values

Rated working voltage:	max. 42 V / 250 V depending on connection	
Rated working current:	max. 2 A	
Protection class:	2, protective insulation <input type="checkbox"/>	
Temperature resistance of sealing materials:	NBR (diaphragm pressure switch)	-40 °C ... +100 °C
	NBR (piston pressure switch)	-30 °C ... +100 °C
	EPDM	-30 °C ... +120 °C
	FKM (diaphragm pressure switch)	-5 °C ... +120 °C
	FKM (piston pressure switch)	-15 °C ... +120 °C
	FFKM	-20 °C ... +120 °C
	Silicone	-40 °C ... +120 °C
	HNBR	-30 °C ... +120 °C
Switching frequency:	200 / min	
Mechanical life expectancy:	1,000,000 cycles (for diaphragm pressure switches, life expectancy value only applies for switching pressures to max. 50 bar)	
Pressure rise rate:	≤ 1,000 bar/s	
Hysteresis:	Average value 10 – 20 % (not adjustable)	
Vibration resistance:	10 g / 5 – 200 Hz sine wave, DIN EN 60068-2-6	
Shock resistance:	294 m/s <sup>2</sup> ; 14 ms half sine wave, DIN EN 60068-2-6	
Materials:	Housing material: zinc-plated steel Protective cap: anodised aluminium	
Protection class: IP67	IP67	
Cable:	Standard length 2 m with wire end sleeves	
Weight:	approx. 120 g	

### Options for 0240 / 0241

- Other cable lengths and plug-in systems
- Fixed switching point, factory-set, set point embossed on housing
- Alternative housing materials and connection threads
- Other sealing materials, such as silicone for diaphragm pressure switches

# 0240 / 0241

## Diaphragm / piston pressure switches, hex 27

- Zinc-plated steel (CrVI-free)
- Overpressure safety up to 300 / 600 bar<sup>1)</sup>
- Switching point can also be adjusted during use
- Protection class 2, protective insulation

hex 24  
PS **PLUS**

## Pressure switches *PLUS*

with integrated connector and supplementary functions

Hex 24, NC or NO, voltage up to 42 V

**Intelligent, supplementary electronic functions broaden the capabilities of mechanical pressure switches by adding numerous features:**

- NAMUR diagnostic function (fail-safe) with short-circuit and cable break detection
- Overvoltage protection for prolonging the contact service life
- Active reduction of EMC emissions
- Temperature-controlled switching function (e.g. cold start, i.e. inactive switching function until a certain temperature is reached)
- In-rush current limitation (overload limitation of the switching contacts when switching load is too high, e.g. lamp load, motor start-up)
- Display of the switching status with LED
- Overload protection with self-resetting electrical fuse
- High protection class up to IP67 and IP6K9K
- Switching point can be set on site with adjusting screw in the connector<sup>1)</sup>

<sup>1)</sup> Pressure switches can also be supplied preset at factory.  
The switching point is embossed onto pressure switches preset at factory.

# Pressure switches *PLUS*

with integrated connector and supplementary functions

M.6  
hex 24  
PS *PLUS*

## Overview of possible supplementary functions

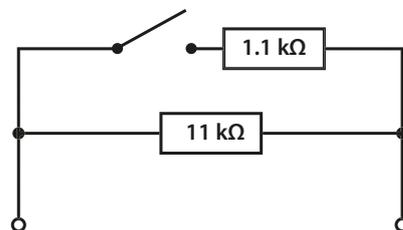

Circuit	Symbole	Function	Application	Code for order number
<b>Resistor</b> Resistor circuit to NAMUR, refer to page 68		<ul style="list-style-type: none"> <li>Diagnostic function (fail-safe) with short-circuit and cable break detection</li> </ul>	Safety systems such as brake systems, hydrostatic steering systems and fire extinguisher systems	04XX - R
<b>Varistor</b> Circuit with varistor for overvoltage limitation, refer to page 69		<ul style="list-style-type: none"> <li>Overvoltage protection for the prolonging of contact service life under conditions of inductive load and long connection length</li> <li>Active reduction of EMC emissions on switching of the pressure switch</li> </ul>	The flyback voltage is effectively limited if the pressure switch interrupts the current in circuits with magnetic valves, relays or motors	04XX - V
<b>NTC thermistor</b>		<ul style="list-style-type: none"> <li>Temperature-controlled switch behaviour (e.g. filter monitoring)</li> <li>In-rush current limitation, e.g. for motors („soft start“) and in PSUs</li> <li>On-delay (in series) and dropout delay (in parallel) for relays</li> </ul>	For a cold start in a mobile hydraulic application, a pressure switch used for filter monitoring may activate due to the high viscosity of the oil at low temperatures, and signals a blocked filter. The NTC thermistor integrated in the pressure switch means the circuit remains interrupted until the pressure switch, and so also the thermistor, have warmed up; not until then does the circuit become low impedance.	04XX - N
<b>PTC thermistor</b>		<ul style="list-style-type: none"> <li>Protection against overcurrent</li> <li>In-rush current limitation, such as for filament lamps and condenser load</li> </ul>	E.g. brake light monitoring in mobile hydraulics: The in-rush current can be up to 8 times the nominal current of a filament lamp. This high current is only reduced at the moment of switch-on, thereby protecting the contact system of the pressure switch from overload.	upon request <sup>1)</sup>
<b>LED</b>		<ul style="list-style-type: none"> <li>Displays the switching status by an integrated LED</li> </ul>	Direct switching status display for applications in which the controller is physically remote; e.g. in an automation system or permanently installed extinguishing or gas systems.	upon request <sup>1)</sup>
<b>Multifuse, PPTC</b>		<ul style="list-style-type: none"> <li>Protection against overcurrent</li> <li>Self-resetting: After removing the short-circuit (cooling the MF) the fuse resets</li> </ul>	In applications which need to be protected against overcurrent e.g. electronic applications	upon request <sup>1)</sup>

<sup>1)</sup> Available from a minimum order quantity of 2,000 pieces.

The additional circuitry of the switching contact of the pressure switch enables not only the states to be shown enabled and disabled, it also enables interrogation for line breaks (standby current principle) and short-circuits in the electric circuit.

The resistor circuitry is designed such that the NAMUR specifications can be satisfied. An operating voltage of 8.2 VDC must be provided for NAMUR-compliant operation. A resistance of 11 kΩ is present in the circuit when the switch contact is open. The resistance is 1 kΩ when the switch contact is closed. Other resistance values can also be realised.

Switching status	Closed	Open	Short-circuit SC	Line Break LB
<b>Contact</b>				
<b>Resistor</b>				
<b>Current</b>				
<b>Example:</b> Supply voltage 12VDC	$I = \frac{U_{cc}}{1\text{ k}\Omega} = \frac{12\text{ V}}{1\text{ k}\Omega} = 12\text{ mA}$	$I = \frac{U_{cc}}{11\text{ k}\Omega} = \frac{12\text{ V}}{11\text{ k}\Omega} = 1,1\text{ mA}$	$I \gg \frac{U_{cc}}{1\text{ k}\Omega} \quad I \gg \frac{12\text{ V}}{1\text{ k}\Omega} \quad I \gg 12\text{ mA}$	$I = 0\text{ mA}$

Technical details	
Rated working voltage $U_{cc}$ :	8.2 VDC ... 30 VDC
Maximum rated operating current:	≤ 30 mA
Switching capacity:	< 1 W
Switching frequency:	200 / min.
Mechanical and electrical service life:	1,000,000 cycles
Permitted pressure rise rate:	≤ 1,000 bar / s
Vibration resistance:	10 g; 5 ... 200 Hz sine wave; DIN EN 60068-2-6
Shock resistance:	294 m/s <sup>2</sup> ; 14 ms half sine wave; DIN EN 60068-2-27
Protection class:	Refer to the table on the following pages: According to manufacturer specifications for the respective plug-in system (only when plugged in), otherwise IP00.

# Pressure switches *PLUS*

Circuit with varistor for overvoltage limitation  
(pressure switches with part numbers 04XX-V)

M.6  
hex 24  
PS *PLUS*

The switching off inductive consumers such as valves, relays and motors by a mechanical pressure switch generates a high voltage peak. The cause for this is the energy stored in the magnetic field of inductance, which entails an induction voltage when the current is changed.

The induction voltage (or flyback voltage) is defined as follows:

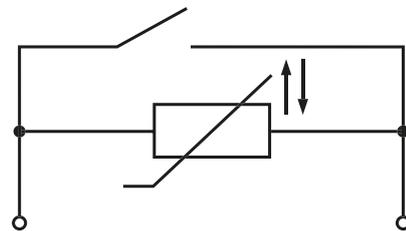

$$U_L = -L \frac{di}{dt}$$

where  $L$  = Inductance  
 $di/dt$  = Change of current over time

This induction voltage can result in discharge effects and the occurrence of arcs at the opening contacts. This gives rise to localised, very hot places on the contact surfaces which are able to fuse the contact material. Increasing load damages the contact surface and the contact transition resistance rises. This can result in sporadic interruption, adhesion and welding of the contacts, and so lead to complete failure of the pressure switch.

The effect of induction voltage is countered by means of a varistor – a resistor which reduces its ohmic resistance with increasing connection voltage. The induction voltage is limited to the responding value of the varistor, and the energy is converted to heat in the varistor.

Varistors are suitable for DC and AC in equal measure. In DC circuits, the response voltage of the varistor must be greater than the highest value of the supply voltage. In AC circuits, it must be 1.5 times the peak-to-peak value of the supply voltage.

Technical details	
Rated operating voltage $U_{cc}$ :	10 V ... 24 ... 30 VDC / 10 V ... 21 VAC
Rated operating current, ohmic load DC12 / AC12:	10 mA ... 4 A
Rated operating current, inductive load DC13 / AC13:	10 mA ... 1 A
AC / DC switching capacity:	< 100 W / 100 VA
Switching frequency:	200 / min.
Varistor response voltage:	41 VDC $\pm$ 10 % at 1 mA
Maximum varistor energy:	0.4 J (10/1000 $\mu$ s); 0.3 J (2 ms)
Maximum varistor peak current:	120 A (8/20 $\mu$ s, one-off loading), 60 A (8/20 $\mu$ s, dual loading)
Mechanical service life:	1,000,000 cycles
Permitted pressure rise rate:	$\leq$ 1,000 bar / s
Vibration resistance:	10 g; 5 – 200 Hz sine wave; DIN EN 60068-2-6
Shock resistance:	294 m/s <sup>2</sup> ; 14 ms half sine wave; DIN EN 60068-2-27
Protection class:	Refer to the table on the following pages: According to manufacturer specifications for the respective plug-in system (only when plugged in), otherwise IP00.

# Pressure switches 30 A/F

Changeover with silver contacts

- Attachment options for wall fitting and block style enable clearly structured, accessible, easy-maintenance installation
- Switching pressure can be adjusted easily by user
- High overpressure safety
- Socket devices enable simple installation on the machine

# Pressure switches 30 A/F

## Technical details

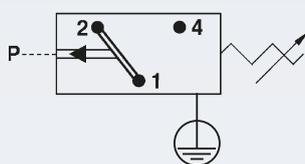

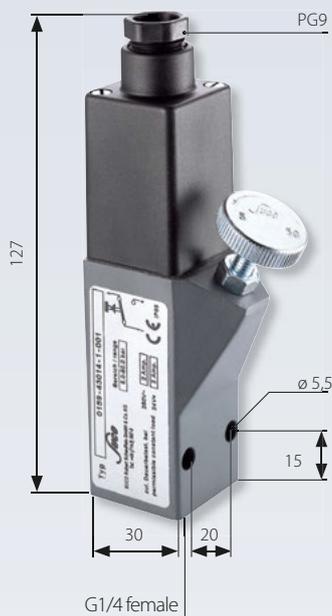

M.7  
30 A/F

Temperature resistance of sealing materials:	NBR (diaphragm pressure switch)	-40 °C ... +100 °C
	NBR (piston pressure switch)	-30 °C ... +100 °C
	EPDM	-30 °C ... +120 °C
	FKM (diaphragm pressure switch)	-5 °C ... +120 °C
	FKM (piston pressure switch)	-15 °C ... +120 °C
Switching frequency:	200 / min	
Mechanical life expectancy:	1,000,000 cycles (for diaphragm pressure switches, life expectancy value only applies for switching pressures up to 50 bar)	
Pressure rise rate:	≤ 1,000 bar / s	
Hysteresis:	Type 0159:	approx. 10 ... 30 % (not adjustable)
	Types 0161, 0162, 0175:	approx. 10 ... 30 % (factory adjustable)
Vibration resistance:	10 g; 5 ... 200 Hz sine wave; DIN EN 60068-2-6	
Shock resistance:	294 m/s <sup>2</sup> ; 14 ms half sine wave; DIN EN 60068-2-27	
Housing material:	Aluminium	
Protection class:	IP65 with Socket device fitted, otherwise IP00	
Weight	Types 0159, 0161, 0162:	approx. 240 g
	Type 0175:	approx. 310 g

Electrical values	0159	0161 / 0162 / 0175

# Explosion-protected pressure switches

according to ATEX directive 2014/34/EU and IECEx scheme

- ATEX certification for the Ex-protected zones:
  - 1 + 2 (Gases and vapours)
  - 21 + 22 (Dust)
  - M2 Mining (Methane / coal dust)
- Types 0342/0343 are certified according to IECEx scheme
- Switching point can be easily adjusted by the user while system in operation
- Compact design
- Excellent price-performance ratio

# Explosion-protected pressure switches

## Technical details

M.8  
ATEX

### Technical explanations

Explosion-protected pressure switches are classified according to the respective combustible material-type. This division is:

<b>Gases and vapours</b> 0165, 0342 / 0343	<b>Dusts</b> 0340 / 0341, 0342 / 0343	<b>Methane / coal dust</b> 0342 / 0343
---	--	---

### ATEX/IECEx marking for pressure switches

Our pressure switches are designed for gases and vapours (G), dust (D) and methane / coal dust (M) in mining:

Series	Flammable materials	Ex zones	Ex marking acc. to 2014/34/EU
0165	Gases and vapours	1 + 2	Ex II 2G Ex d II C T6/T5 X
0340 / 0341	Dusts	22	Ex II 3D Ex tc IIIC T90°C Dc
0342 / 0343	Gases and vapours	1 + 2	Ex II 2G Ex db IIC T6 / T5 Gb
	Dusts	21 + 22	Ex II 2D Ex tb IIIC T80°C / T100°C Db
	Methane / coal dust	M2 (Mining)	Ex I M2 Ex db I Mb

The following table shows an overview of the explosion protection zones, device groups and categories. The applications covered by our pressure switches (according to Ex zones) are highlighted in colour.

### Conditions in potentially explosive atmosphere

Com-bustible materials	Temporary behaviour of com-bustible materials in potentially explosive area	Categori-sation of potentially explosive areas	Marking required on equipment to be used	
			Equipment group	Equipment category
Gases Vapours	are present continually, frequently or for long periods	Zone 0	II	1G
	occur occasionally	Zone 1	II	2G
	are unlikely to occur, and if so, are then only seldom or for short periods	Zone 2	II	2G
Dusts	are present continually, frequently or for long periods	Zone 20	III	1D
	occur occasionally	Zone 21	III	2D
	occur if accumulated dust is whirled up, and then only seldom or for short periods	Zone 22	III	3D or 2D
Methane / Coal dust	operation where there is a risk of explosions	-	I	M1
	disconnection where there is a risk of explosion	-	I	M2 or M1

# Vacuum switches

for negative pressure from 950 mbar to 100 mbar

- Switching point can be adjusted when fitted on site<sup>1)</sup>
- High overpressure resistance
- Long service life even under harsh conditions
- 0150 series available as changeover contacts up to 250 V
- 0151 series available as NC or NO up to 42 V

<sup>1)</sup> Pressure switches can also be supplied preset at factory.  
Our preset switches are sealed with lacquer paint, set points are embossed on the housing.

# Vacuum switches

## Technical details

M.9

Vacuum

Type:	<b>0150</b>	<b>0151</b>
Operating voltage:	10 ... 250 VAC/DC	10 ... 42 VAC/DC
Rated current (resistive load):	Refer to electrical values below	10 mA ... 4 A
Switching power:	Refer to electrical values below	100 VA
Temperature resistance of sealing materials:	-20 °C ... +100 °C	-15 °C ... +120 °C
Switching frequency:	200 / min	
Mechanical life expectancy:	1,000,000 cycles	
Pressure rise rate:	≤ 1,000 bar / s	
Vibration resistance:	10 g; 5 ... 200 Hz sine wave; DIN EN 60068-2-6	
Shock resistance:	294 m/s <sup>2</sup> ; 14 ms half sine wave; DIN EN 60068-2-27	
Housing material:	Aluminium	Brass
Protection class:	IP65 with socket device	IP65, terminals IP00
Weight:	approx. 270 g	approx. 140 g

### 0150 Electrical values (also refer to page 14 for technical explanations)

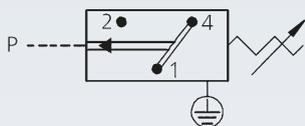

Rated working voltage $U_e$	Rated working current $I_e$ (usage category)
250 VAC 50 / 60 Hz	5 A (AC 12)
250 VAC 50 / 60 Hz	1 A (AC 14)
24 VDC	3,5 / 3,5 A (DC 12 / DC 13)
50 VDC	2 / 1 A (DC 12 / DC 13)
75 VDC	1 / 0,5 A (DC 12 / DC 13)
125 VDC	0,3 / 0,2 A (DC 12 / DC 13)
250 VDC	0,25 / 0,2 A (DC 12 / DC 13)
Rated insulation voltage $U_i$ :	300 V
Rated impulse withstand voltage $U_{imp}$ :	2,5 kV
Conventional thermal current $I_{the}$ :	6 A
Switching overvoltage:	< 2,5 kV
Rated frequency:	DC and 50 / 60 Hz
Nominal current of short-circuit mechanism:	up to 6,3 A
Conditional short-circuit current:	< 350 A
Tightening torque of terminal screws:	< 0,35 Nm
Connector cross-section:	0.5 ... 1.5 mm <sup>2</sup>

# 0150

## Vacuum switch up to 250 V with changeover contact

- Aluminium housing
- Operating voltage up to 250 V
- Changeover with silver contacts
- Overpressure safety up to 20 bar<sup>1)</sup>
- Socket device similar to DIN EN 175301 (DIN 43650)
- Hysteresis approx. 50 – 150 mbar (cannot be changed)

$p_{\max}$ in bar	Adjustment range in mbar (relative)	Tolerance at room temperature in mbar	Thread	Article number
----------------------	--	--	--------	----------------

### 0150 Vacuum switch

# Technical explanations for electronic pressure switches

## What is an electronic pressure switch?

An electronic pressure switch converts the medium pressure which is present at the measuring cell into a digital, electrical switch signal (ON / OFF).

An electronic pressure switch is more complex than a mechanical pressure switch, and thus generally more expensive. As an electronic pressure switch has no moving parts (relative to each other), it usually has a much prolonged service life and provides a higher level of precision (depending on application).

The hysteresis can be set over a wide range and virtually independently of the switching point. Electronic pressure switches can also be equipped with additional functions, such as optical displays and menu control.

## How does an electronic pressure switch work?

The pressure measuring cell fitted (1) has a membrane that is exposed to the pressure to be measured. Affixed to this membrane is a bridge circuit consisting of four ohmic resistors in the form of a Wheatstone bridge. The values of these resistors change proportionally to the pressure load present at the measuring cell or membrane. The bridge voltage of the measuring cell is amplified in the evaluation electronics (2) and processed digitally by a microcontroller (3).

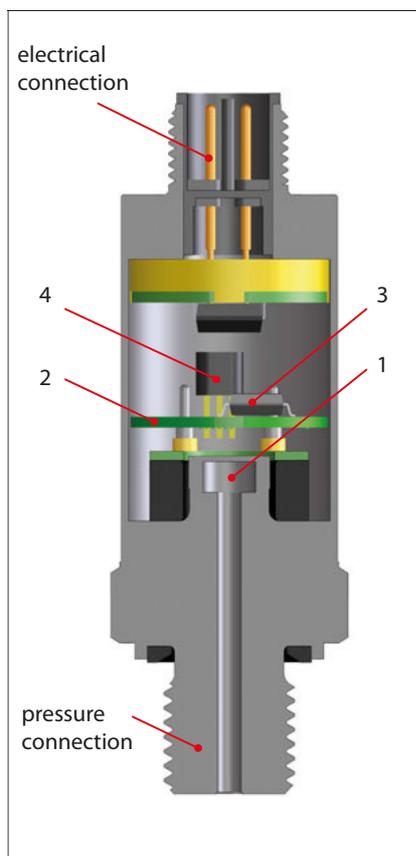

Once the switching point or switch-back point is reached, the output transistor (4) closes or opens depending on the output function (normally open / closed contact).

## „Oil-filled“ stainless steel measuring cell

In this measuring cell technology, the piezoresistive measuring cell is packaged within a metallic housing filled with fluorine oil. This means the measuring cell is virtually free of external mechanical stress. Fluorine oil has excellent characteristics in regards to temperature and ageing behaviour, and is not flammable and so fits perfectly for oxygen applications. It is not recommended for food applications.

## Ceramic measuring cell / thick film technology

Ceramic thick film pressure measuring cells are made up of a sintered ceramic body. The ceramic body sleeve already has the key geometries for the subsequent pressure range. The membrane thickness required and thus, the pressure range required is established with grinding and lapping. The resistors are imprinted with thick film technology and interconnect to form a measuring bridge.

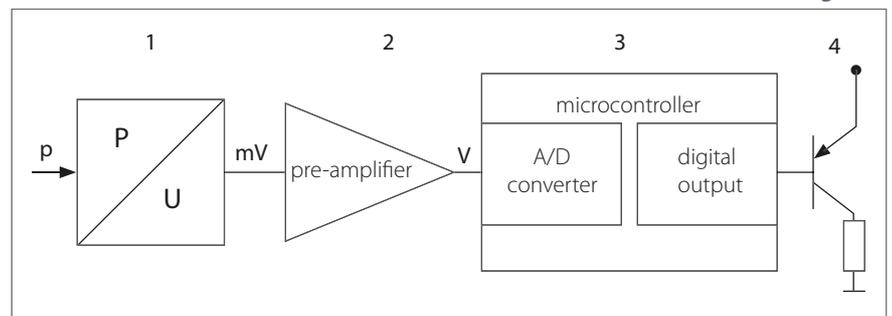

## SoS technology

In the silicone-on-sapphire technology, the substrate of the thin film measuring cell is synthetic sapphire. This has excellent mechanical and temperature stable properties and prevents undesired parasitic effects, thereby having a positive effect on accuracy and stability. In conjunction with a titanium membrane, this results in virtually unique coaction between the temperature coefficients of sapphire and titanium.

This is because, unlike silicon and stainless steel, they are more closely matched and thus require only a low level of compensation. This also has a favourable effect on longterm stability.

Block diagram

### Adjustment range of switching point

The pressure range within which the switching point of an electronic pressure switch can be set is called adjustment range. The switching point corresponds to the pressure value at which the electric circuit of the output is opened or closed.

### Switching point accuracy and tolerances

The switching point accuracy of electronic pressure switches is specified by SUCO and relates to the full scale value (FS).

The switching point tolerances specified by us are valid at room temperature (RT) and new state. The values can change as a result of temperature, ageing and application specific conditions. Switching points can either be set at the factory or by the customer on site (depending on model).

### Hysteresis

#### Rising/falling switching point

The difference between the rising (upper) and falling (lower) switching points (refer to the figure) is known as hysteresis (switchback difference).

Our electronic pressure switches are a perfect fit to extremely low or high hysteresis.

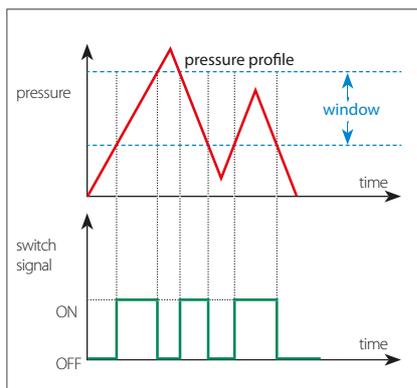

Hysteresis is either set at the factory or by the customer on site (only the 0570 series). The hysteresis or switch-back point of all pressure switches can be set over almost the entire adjustment range.

Please ask about the possible setting ranges you may require.

**The hysteresis specified in the data sheet is set if nothing is specified in the order.**

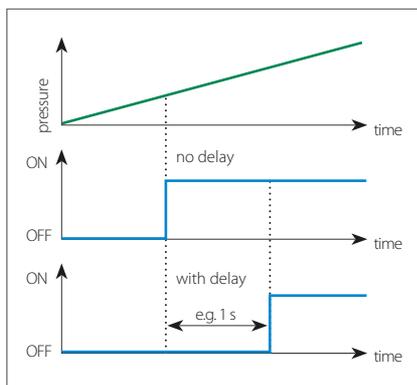

### Window function

In the window function, the switch signal is programmed such that it remains ON or OFF between two values. This means a defined pressure range can be monitored. This function is only possible on the 053X series.

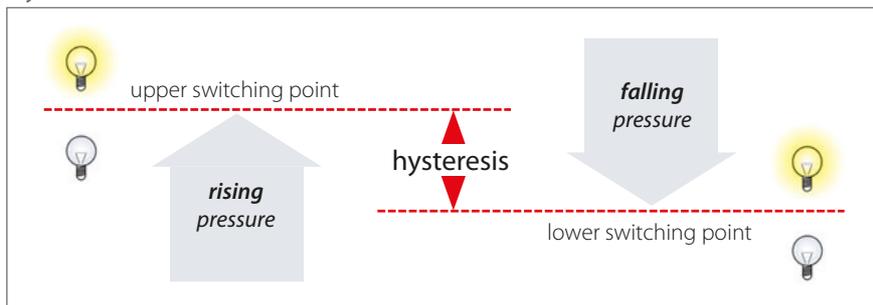

### Switching delay

Switch outputs can be programmed with a delay separately for switch-on and switch-off (depending on model). Delays of up to several seconds are possible.

### Hysteresis

### Operating/supply voltage

All electronic pressure switches work with DC voltage and have no galvanic isolation. Within the thresholds specified in the relevant data sheet, the supply voltage may change without influencing the output signal. In order to guarantee the functionality of an electronic pressure switch, the minimum operating voltage must be respected. The maximum operating voltage may not be exceeded to avoid damage on the electronics.

### Output current

Depending on the model, electronic pressure switches have a maximum output current of 0.5 A to 1.4 A and therefore are also suitable for applications requiring relatively high control and switching currents.

### Load

The output transistor is an open collector, i.e. the output must be wired with a load. The load limits the switching current and is selected according to the application.

Electronic pressure switches have protection from voltage peaks at the output, and are short-circuit proof. When inductive loads are switched (relays, motors, etc.), provision may have to be made for an additional electronic snubber to eliminate high voltage peaks. This is realised e.g. with flyback diodes, or even better with suppressor diodes or varistors.

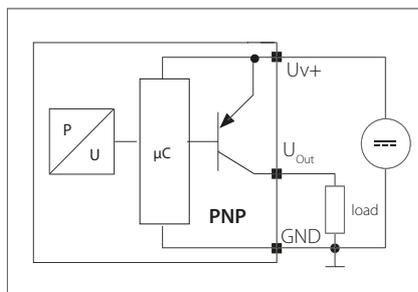

# Technical explanations for electronic pressure switches

## Connection types and output functions

There are essentially two different ways to connect the load or apparent ohmic resistance to electronic pressure switches:

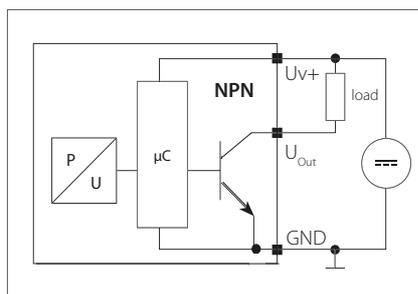

### PNP output / high-side / plus-switching

PNP output (plus-switching) is the most popular variant in Europe. Here the load is connected to the output of the switch and ground (GND as reference potential).

### NPN output / low-side / minus-switching

For an NPN output (minus-switching), the load is connected to the switching output and to the positive line of the supply voltage (Uv+ as reference potential).

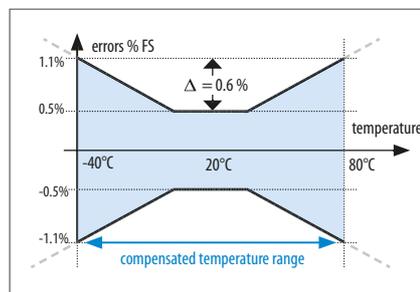

### NO / NC

Electronic pressure switches are available as normally open (NO) or normally closed (NC) versions. Also refer to section M.0, page 14.

## Temperature errors and ranges

The temperature (both of the medium and environment) generally has a significant influence on the accuracy of an electronic pressure switch. Electronic pressure switches are temperature compensated over a particular range corresponding to the typical application. This means that temperature errors within this temperature range are minimised by means of circuitry design and algorithms. The temperature error is added to the accuracy, and shown in the total error band of the electronic pressure switch, also called „butterfly graph“. Outside the compensated temperature range, the maximum error is not defined, however the electronic pressure switch still functions. To prevent mechanical and electrical damage, electronic pressure switches may not be used beyond the threshold temperature ranges specified in the data sheet.

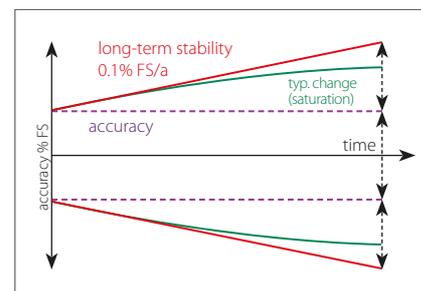

## Service life and long-term stability

Service life information pertains to nominal conditions specified in the data sheet, and can vary considerably when a product is operated mechanically or electrically outside the specifications. Service life essentially depends on the used measuring cell technology.

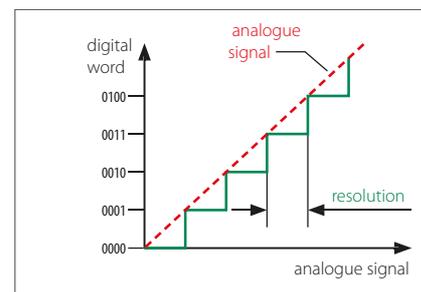

Ageing is accelerated (or slowed) due to different factors - such as temperature, temperature change and reduction of mechanical forces. The occurrence of ageing does effect the total accuracy.

SUCO specifies long-term stability in accordance with DIN 16086 in relation to one year. Typically the influence of aging on the accuracy reduces with increasing operating duration. The information in the data sheet corresponds to the worst case scenario.

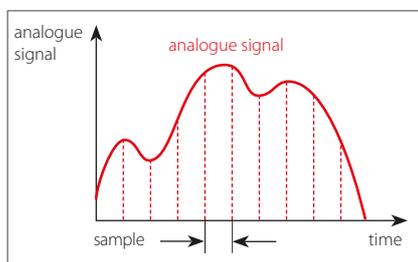

## Resolution

The A/D resolution (analogue - digital) of an electronic pressure switch defines the smallest change of the analogue - digital - analogue conversion which takes place by the signal processing of an electronic pressure switch. If for example 13-bit resolution is used for an electronic pressure switch with a 100 bar setting range, the smallest signal change is 8192 steps ( $2^{13}$ ). As state of the art a resolution of 12 bits and hence 4096 steps ( $2^{12}$ ) is typical. Therefore pressure changes of  $100 \text{ bar} / 4096 = 0.024 \text{ bar}$  can be recorded.

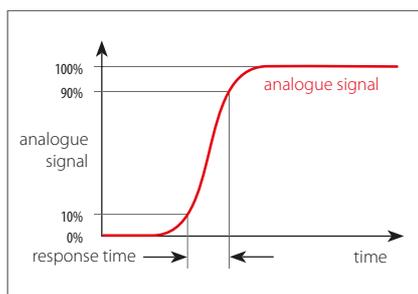

### Sampling rate

The sampling rate (or sampling frequency) defines the number of samples per time unit (typically in seconds or milliseconds) taken from an analogue signal and converted to a digital signal. The sampling rate is an indicator of how fast the output signal of an electronic pressure switch responds to the pressure change at the input.

### Response time

The response or circuit time is shorter than 2 to 4 milliseconds (depending on model). The sum of A/D and D/A conversions, and the analogue and digital filters in the signal chain from the measuring bridge to the output, make up the response time. Filtering is used to suppress unwanted pressure peaks and electrical interference signals and to ensure good EMC characteristics.

### CE mark

Electronic pressure switches from SUCO fall under the 2014/30/EU EMC Directive. EC declarations of conformity have been issued for the electronic pressure switches are available on request or can be downloaded from our website. The relevant devices are denoted by a CE mark in our catalogue.

The Machinery Directive 2006/42/EC is not applicable, because our products are classed as components.

Our products are designed for Group 2 fluids based upon good engineering practise in line with Pressure Equipment Directive 2014/68/EU, meaning neither a declaration of conformation may be issued nor a CE mark affixed.

### Electromagnetic compatibility (EMC)

Electronic pressure switches from SUCO do comply to all important industrial EMC standards. The basis for the standards are the stricter thresholds for transient emissions in residential environments (EN 61000-6-3) and immunity for industrial environments (EN 61000-6-2).

Generic standard	Test standard	Parameter(s)
Radio disturbance and immunity	EN 55016-2-1 EN 55016-2-3	60 dBuV
Radiated, high-frequency electromagnetic field immunity test	EN 61000-4-3	10 V/m; 80-1000 MHz, 3 V/m; 1400-2000 MHz, 1 V/m; 2000-2700 MHz
Immunity to conducted disturbances, induced by radio-frequency fields	EN 61000-4-6	10 V; 0,15-80 MHz
Electrical fast transient / burst immunity test	EN 61000-4-4	±2 kV
Surge immunity test	EN 61000-4-5	±0.5 kV (common) ±0.5 kV (differential)
Electrostatic discharge (ESD) immunity test	EN 61000-4-2	air: 8 kV with contact: 4 kV

## Conversion chart for pressure units

Abbreviation for unit	Name of unit	Pa = N/m <sup>2</sup>	bar	Torr	lbf/in <sup>2</sup> , PSI
1 Pa = N/m <sup>2</sup>	Pascal	1	0.00001	0.0075	0.00014
1 bar	Bar	100 000	1	750.062	14.5
1 Torr = 1 mmHg	Millimeters of mercury	133.322	0.00133	1	0.01934
1 lbf/in <sup>2</sup> = 1 PSI	Pound-force per square inch	6894	0.06894	51.71	1

## Conversion chart for temperature units

	K	°C	F
K	1	K - 273.15	9/5 K - 459.67
°C	°C + 273.15	1	9/5 °C + 32
F	5/9 (F + 459.67)	5/9 (F - 32)	1

### Insulation strength

According to the latest specifications for immunity to surges and lightning protection, the following must be taken into account when testing insulation strength: With insulation test devices having an inner resistance exceeding 42 Ohm, the insulation strength of electronic pressure switches can be tested up to 500 VDC.

All contacts must be tested short-circuited against the housing. For a specific threshold value of test voltage, the protective circuit for surge protection is activated without any defects arising within the circuit.

In the process, the current may rise to a point at which an insulation strength fault is indicated. The recommendation therefore is to conduct the insulation test of the electronic pressure switch when it is removed, or independently of the overall system.

### Medium compatibility

The specifications on medium compatibility in this catalogue pertain to the specific seal and housing materials as well as the used measuring cell technology and so cannot be generalised.

### Titanium

Its high levels of mechanical resistance and the wide media compatibility – in particular to corrosive media – do make titanium the ideal material for measuring cells and membranes. It is not recommended for oxygen or hydrogen applications.

### Stainless steel (1.4305 / AISI 303)

Stainless steel with broad level of media compatibility. Also suitable for oxygen and hydrogen applications.

### Stainless steel (1.4404 / AISI 316L)

Stainless steel with broad level of media compatibility. Also suitable for chemical industry and sea water applications.

### Oxygen and hydrogen

It is recommended to use an EPDM seal for the media oxygen / hydrogen to be monitored. The EPDM seal of the „Performance“ series (pp. 106-113) was successfully tested at the BAM (Federal Institute for Materials Testing) up to 250 bar by means of an oxygen pressure shock test at 60 °C.

EPDM must not come into contact with oil, as this results in swelling and softening of the material and thus the failure of the electronic pressure switch.

Country-specific safety requirements and application guidelines must be observed if the medium to be monitored is oxygen or hydrogen, such as DGUV accident prevention regulations (DGUV 500, Section 2.32 and BGI 617).

**Please specify when ordering „for oxygen, oil and grease-free“ or order plasma cleaned and individually packaged electronic pressure switches (see also „Plasma cleaning for oxygen applications / LABS-free (PWIS-free)“ on page 9).**

### Pressure peak dampening

If required, our electronic pressure switches can also be fitted with a pressure snubber (pressure peak orifice) to protect the measuring cell against transient pressure loads such as pressure peaks due to the switching of valves, cavitation effects, etc. which can shorten life expectancy.

For liquid media, the hole of a pressure snubber cannot be chosen to be any small size. At low temperatures the viscosity of the media will increase. In a case of dropping pressure the media might remain in the cavity behind the snubber which might affect the functionality of the electronic pressure switch. Thus a bore diameter of 0.8 mm has been established.

### Product information

The technical information in this catalogue is based upon fundamental testing during product development, as well as upon empirical values. The information cannot be used for all application scenarios.

**Testing of the suitability of our products for a specific application (e.g. also the checking of material compatibilities) falls under the responsibility of the user. It may be the case that suitability can only be guaranteed with appropriate field testing.**

**Subject to technical changes.**

Performance

adjustable at factory

## Electronic pressure switches, Performance series

adjustable at factory or programmable with programming device PPD05

- Very attractively priced electronic pressure switches, particularly for high volume deployment
- High overpressure protection (up to 2 x)
- Small, compact electronic switches with ceramic sensor
- Hysteresis adjustable within a wide range (2 % – 98 %, set at factory)
- Programming of switching points and switching delay time possible via PPD05 (see Chapter E.7, page 133)
- Monitoring of a pressure range due to window function
- High level of adaptability to your requirements (custom solutions)
- Available as 'plasma cleaned for oxygen applications'<sup>1)</sup>

<sup>1)</sup> For oxygen applications, the EPDM diaphragm can only be used up to 250 bar and a media temperature of max. +60°C.

hex 27 / 30 A/F  
adjustable by user

# Electronic pressure switches

hex 27 and 30 A/F, adjustable by user

- Ceramic sensor in thick film technology
- High overpressure protection to 500 bar
- Easy adjustment of switching point from the outside using set screw
- Hysteresis available within broad range (2 % – 95 %, set at factory)
- Very high switching currents (to 1.4 A)

# Electronic pressure switches

## Technical details

		<b>0520 NO / NC</b>		
Transistor output:	PNP output (High-Side N-channel)			
Supply voltage:	15 – 36 VDC			
Output current:	1.4 A transistor output (PNP, DC12) with short-circuit and overvoltage protection			
Idle power consumption:	< 15 mA			
Adjustment range $p_{nom}$ :	0 – 10 bar	0 – 100 bar	0 – 250 bar	
Max. overpressure $p_u$ <sup>1)</sup> :	20 bar	150 bar	500 bar	
Burst pressure <sup>1)</sup> :	25 bar	175 bar	600 bar	
Mechanical life expectancy:	5,000,000 switching cycles at rise rates to 1,000 bar/s at $p_{nom}$			
Pressure rise rate:	1,000 bar/s			
Accuracy:	±0.5 % of adjustment range $p_{nom}$ full scale (FS) at room temperature			
Switching point adjustment range:	2 ... 100 % of adjustment range $p_{nom}$ (FS), set from outside using set screw			
Hysteresis:	2 ... 95 % FS, programmable at factory (max. tolerance ±1.0 % of adjustment range)			
Standard-Hysteresis without order specification:	approx. 0,5 bar	approx. 5 bar	approx. 10 bar	
Resolution:	0.15 % of adjustment range $p_{nom}$ (FS)			
Long term stability:	±0.1 % of adjustment range $p_{nom}$ (FS) per year			
Repeatability <sup>2)</sup> :	±0.1 % of adjustment range $p_{nom}$ (FS)			
Switching time:	< 4 ms			
Temperature error <sup>2)</sup> :	±0.04 % of adjustment range $p_{nom}$ (FS) / °C			
Compensated temperature range:	0 °C ... +70 °C (+32 °F ... +158 °F), total error ≤ ±2 %			
Temperature range ambient:	-30 °C ... +80 °C (-22 °F ... +178 °F)			
Temperature range media:	with NBR joint: -30 °C ... +100 °C (-22 °F ... +212 °F)

# Menu-controlled electronic pressure switches

with display

- Menu-controlled, simple programming of switching functions
- 2 switching outputs and 1 analogue output
- Numerous programming functions, such as
  - switching time delay
  - zero point reset
  - peak value memory
  - switching point counter
- Current pressure value and switching states shown on 3-digit display
- Very high switching currents up to 1.4 A

# Menu-controlled electronic pressure switches

## Technical details

## E.4 menu-controlled

		<b>0570 Electronic pressure switches</b>
Switching function:		NC/NO, programmable, 2 switching points, switching time delay, zero point reset, peak value memory (within adjustment range), switching point counter
Settings:		Programmable using keypad on front
Outputs:		2 transistor outputs (each 1.4 A DC12 / PNP) 1 analogue output (4 – 20 mA)
Supply voltage $U_B$ :		12 - 30 VDC
Switching status display:		2 LEDs (yellow)
Pressure display:		Current pressure displayable in bar or PSI on 3-digit LED (red)
Life expectancy:		5,000,000 switching cycles at rise rates to 1,000 bar/s at $p_{nom}$
Pressure rise rate:		$\leq 1,000$ bar/s
Switching time:		$< 4$ ms
Switching time delay:		Adjustable between 0 and 3.0 s
Hysteresis:		1 – 99 % FS, programmable from keypad
Accuracy:		$\pm 0.5$ % (FS at room temperature)
Display accuracy:		$\pm 0.5$ % (FS at room temperature) $\pm 2$ digits
Temperature drift:		$\pm 0.2$ % / $10$ °C
Temperature range:		NBR, FKM $-20$ °C ... $+80$ °C
Compensated temperature range:		$0$ °C ... $+70$ °C ( $32$ °F ... $158$ °F), total error $\pm 2$ %
Housing material:		die-casted zinc
Wetted parts material	Housing:	anodised aluminium
	Measuring cell:	Ceramic
	Seal material:	NBR or FKM
Vibration resistance:		10 g at 5 ... 2000 Hz sine wave; DIN EN 60068-2-6
Shock resistance:		294 m/s <sup>2</sup> ; 11 ms half sine wave; DIN EN 60068-2-27
Protection class:		IP65
Electromagnetic compatibility:		acc. to EN 50081-1, EN 50081-2, EN 50082-2
Weight:		approx. 340 g
Access PIN:		The switch can be protected with a pin between 1 and 999

## 0570

### Electronic pressure switch

- Anodised aluminium and die-casted zinc
- Ceramic measuring cell in thick-film technology
- Supply voltage 12 ... 30 VDC
- Overpressure protection to 20 / 150 / 500 bar<sup>1)</sup>
- Programmable using keypad on front
- Switching time delay (setting from 0 to 3 s)
- Peak value memory (within the measurement range)
- Pin protection possible to prevent misuse
- Socket device included

# Technical explanations for pressure transmitters

## What is a pressure transmitter?

A pressure transmitter (also called pressure transducer or pressure converter) is a component used to convert a pneumatic or hydraulic pressure to an electric (usually analogue and linear) output signal, such as a current or voltage.

## How does a pressure transmitter work?

The pressure measuring cell fitted has a membrane (1) that is exposed to the pressure to be measured. Affixed on this membrane is a bridge circuit consisting of four ohmic resistors in the form of a Wheatstone bridge. The values of these resistors change proportionally to the pressure load present at the measuring cell or membrane. The bridge voltage of the measuring cell is amplified in the evaluation electronics (2) and processed digitally by a microcontroller (3).

The downstream output stage (4) converts this signal to the output signal required (such as 4 - 20 mA or 0 - 10 V).

## SoS technology

In the silicone-on-sapphire technology, the substrate of the thin film measuring cell is synthetic sapphire. This has excellent mechanical and temperature stable properties and prevents undesired parasitic effects, thereby having a positive effect on accuracy and stability. In conjunction with a titanium membrane, this results in virtually unique coaction between the temperature coefficients of sapphire and titanium.

This is because, unlike silicon and stainless steel, they are more closely matched and so only require a low level of compensation overhead. This also has a favourable effect on long-term stability.

## „Oil-filled“ stainless steel measuring cell

In this measuring cell technology, the piezoresistive measuring cell is packaged within a metallic housing filled with fluorine oil. This means the measuring cell is virtually free of external mechanical stress. Fluorine oil has excellent characteristics in regards to temperature and ageing behaviour, and is not flammable and so fits perfectly to oxygen applications. It is not recommended for food applications.

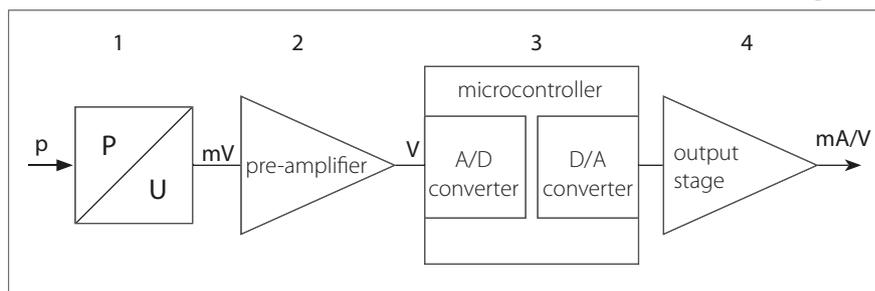

## Ceramic measuring cell / thick film technology

Ceramic thick film pressure measuring cells are made up of a sintered ceramic body. The ceramic body sleeve already has the key geometries for the subsequent pressure range. The membrane thickness required and thus, the pressure range required is established with grinding and lapping. The resistors are imprinted with thick film technology and interconnect to form a measuring bridge.

## Standard signals

Output signals 4 - 20 mA, 0 - 10 V and 0.5 - 4.5 V ratiometric in particular have established themselves in the industry. SUCO also offers transmitters with customer-specific output signals (such as 1 - 5 V).

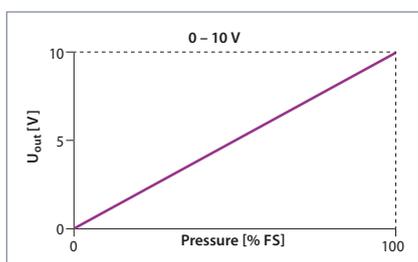

Block diagram:

### Voltage output 0 - 10 V

Transmitters with an output signal of 0 to 10 V are a commonly used variant due to their simple initial operation and straightforward scaling of the signal (0 V for 0 bar). The output load must be selected as highly resistive (with typical minimum value 4.7 kΩ). SUCO transmitters with voltage output have a 3-wire design.

The maximum connection length should not exceed 30 m to prevent significant voltage drops in the signal line.

Conversion formula for pressure and voltage:

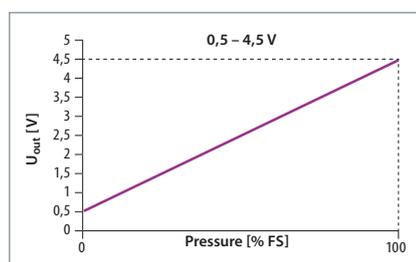

$$U_{\text{out}} = \frac{\text{pressure applied}}{\text{pressure range}} \times 10 \text{ V}$$

### Voltage output

#### 0.5 – 4.5 V ratiometric

SUCO transmitters with ratiometric output are operated with a 5 V supply voltage as 3-wire configuration. The output signal is directly proportional to / dependent on the supply voltage; this is known as a ratiometric dependency. 0.5 – 4.5 V is established as an output voltage because many A/D converters work with reference voltage  $U_{V+}$  of 5 V. The output voltage 0.5 V equals to 10% and 4.5 V corresponds to 90% of the supply voltage. The span is therefore 80% of the supply voltage.

This variant is used for example when a transmitter and a downstream A/D converter as an evaluation unit are to be powered with the same reference / operating voltage.

Conversion formula for pressure and voltage:

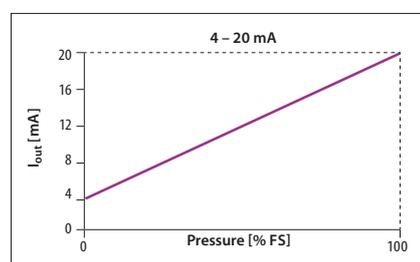

$$U_{\text{out}} = 0.1 \times U_{V+} + \frac{\text{pressure applied}}{\text{pressure range}} \times 0.8 \times U_{V+}$$

with  $U_{V+}$  = operating voltage

### Current output 4 – 20 mA

The most common analogue output signal of sensors is 4 – 20 mA current output (as 2-wire configuration). The advantage of a 4 – 20 mA output signal is the 4 mA offset which allows the monitoring of potential wire break and short-circuit (life zero signal).

The signal can also be transmitted over long distances with no loss in accuracy. This variant is also the least sensitive to EMC factors. 2-wire technology also means wiring overhead is reduced.

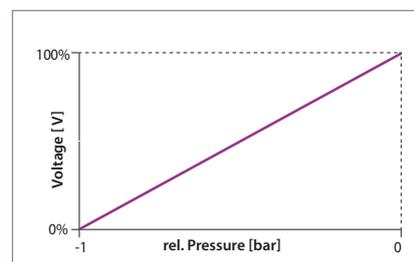

Conversion formula for pressure and voltage:

$$I_{\text{out}} = 4 \text{ mA} + \frac{\text{pressure applied}}{\text{pressure range}} \times 16 \text{ mA}$$

### Output for vacuum transmitters

As depicted in the sketch on the upper right, the output is at maximum signal at zero pressure. Therefore at maximum vacuum the output signal is at its minimum.

### Load / apparent ohmic resistance for pressure transmitters

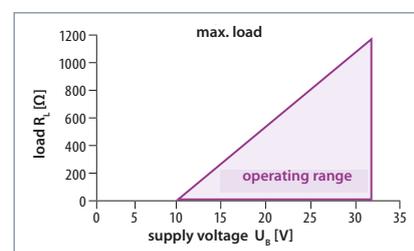

An appropriate ohmic load must be connected to guarantee perfect functioning of a pressure transmitter.

For transmitters with a voltage output (V), the load should be at least 4.7 kΩ.

For transmitters with a current output (4 - 20 mA), the maximum load is calculated using the following formula:

$$R_L = \frac{U_{V+} - U_{V+(min)}}{20 \text{ mA}}$$

$U_{V+(min)}$  is the minimum supply voltage - to be taken from the data sheet.  $U_{V+(min)} = 10 \text{ V}$  gives the following operating range for example:

### Supply / operating voltage UB

All pressure transmitters work with DC voltage and have no galvanic isolation. Within the thresholds specified in the relevant data sheet, the supply voltage may change without influencing the output signal. (the ratiometric variant is an exception).

To guarantee the functionality of a transmitter, the minimum supply voltage may not fall below. The maximum operating voltage may not be exceeded to avoid damage on the electronics.

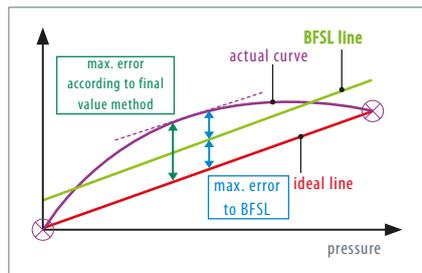

# Technical explanations for pressure transmitters

## Accuracy (to DIN EN 61298)

The (measuring) accuracy of pressure transmitters is specified by SUCO as  $\pm 0.5\%$  or  $\pm 1\%$  of the span (also called full scale). Accuracy includes zero point offset, non-linearity, hysteresis and non-repeatability, and is defined at room temperature and new state. This method defines the maximum deviation from the ideal line (in contrast to the BFSL method in which the average deviation is given). Other factors influencing the total accuracy, such as temperature and ageing, are specified separately.

## Non-linearity (to DIN EN 61298)

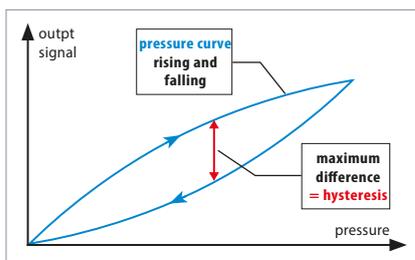

Non-linearity (also linearity) defines the deviation of the actual output curve from the theoretical ideal line. SUCO specifies the maximum error in relation to the overall span or full scale (FS) of the pressure range.

Non-linearity is also shown as BFSL (Best Fit Straight Line) as a reference value in the technical specifications. Non-linearity generally has the biggest influence on the overall error rate. Typically, non-linearity as per BFSL corresponds to half of non-linearity as per the full scale method (1% FS  $\sim$  0.5% BFSL).

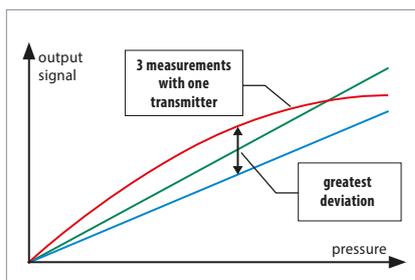

## Hysteresis (to DIN EN 61298)

For a pressure transmitter, hysteresis specifies the difference of output signal between a rising and falling pressure, and is typically very low and negligible for SUCO pressure transmitters.

## Non-repeatability (to DIN EN 61298)

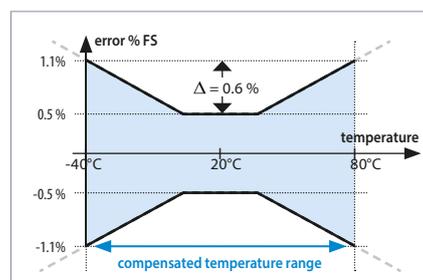

Non-repeatability defines reproducibility of the output signal. The pressure is attained three times for example - the maximum variance between these three values gives the non-repeatability.

## Temperature errors and ranges

The temperature (both of the medium and ambience) generally has a significant influence on the accuracy of a pressure transmitter. Pressure transmitters are temperature compensated over a particular range corresponding to the typical application. This means that temperature errors within this temperature range are minimised by means of circuitry design and algorithms. The temperature error is added to the accuracy, and shown in the total error band of the pressure transmitter, also called butterfly graph. Outside the compensated temperature range, the maximum error is not defined, however the pressure transmitter still functions.

To prevent mechanical and electrical damage, pressure transmitters may not be deployed beyond the threshold temperature ranges specified in the data sheet.

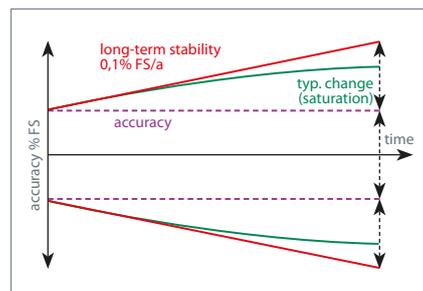

## Service life and long-term stability

Service life information pertains to nominal conditions specified in the data sheet, and can vary considerably when a product is operated mechanically or electrically outside the specifications. Service life essentially depends on the used measuring cell technology.

Ageing is accelerated (or slowed) due to different factors - such as temperature, temperature change and reduction of mechanical forces. The occurrence of ageing does effect the total accuracy.

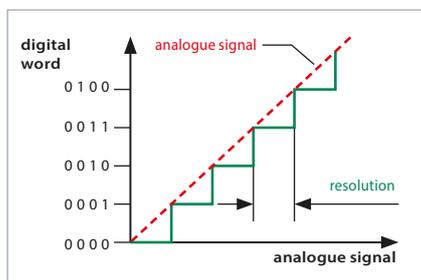

SUCO specifies long-term stability in accordance with DIN 16086 in relation to one year. Typically the influence of aging on the accuracy reduces with increasing operating duration. The information in the data sheet corresponds to the worst case scenario.

### Resolution

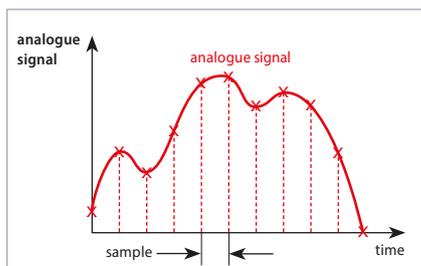

The A/D resolution (analogue - digital) of an pressure transmitter defines the smallest change of the analogue - digital - analogue conversion which takes place by the signal processing of an pressure transmitter.

If for example 13-bit resolution is used for an pressure transmitter with a 100 bar setting range, the smallest signal change is 8192 steps ( $2^{13}$ ). As state of the art a resolution of 12 bits and hence 4096 steps ( $2^{12}$ ) is typical. Therefore pressure changes of 100 bar / 4096 = 0.024 bar can be recorded.

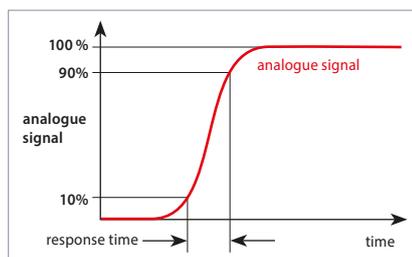

### Sampling rate

The sampling rate (or sampling frequency) defines the number of samples per time unit (typically in seconds or milliseconds) taken from an analogue signal and converted to a digital signal. The sampling rate is an indicator of how fast the output signal of a pressure transmitter responds to the pressure change at the input.

### Response time

The response or circuit time is shorter than 2 to 4 milliseconds (depending on model). The sum of A/D and D/A conversions, and the analogue and digital filters in the signal chain from the measuring bridge to the output, make up the response time. Filtering is used to suppress unwanted pressure peaks and electrical interference signals, and for good EMC characteristics.

### CE mark

Pressure transmitters from SUCO fall under the 2014/30/EU EMC Directive.

EC declarations of conformity have been issued for the pressure transmitters are available on request or can be downloaded from our website. The relevant devices are denoted by a CE mark in our catalogue.

The Machinery Directive 2006/42 EC is not applicable, because our products are classed as components. Our products are designed for Group 2 fluids based upon good engineering practise in line with Pressure Equipment Directive 2014/68/EU, meaning neither a declaration of conformation may be issued nor a CE mark affixed.

### Electromagnetic compatibility (EMC)

Pressure transmitters from SUCO do comply to all important industrial EMC standards. The basis for the standards are the stricter thresholds for transient emissions in residential environments (EN 61000-6-3) and immunity for industrial environments (EN 61000-6-2).

Generic standard	Test standard	Parameter(s)
Radio disturbance and immunity	EN 55016-2-1 EN 55016-2-3	60 dBuV
Radiated, high-frequency electromagnetic field immunity test	EN 61000-4-3	10 V/m; 80-1000 MHz, 3 V/m; 1400-2000 MHz, 1 V/m; 2000-2700 MHz
Immunity to conducted disturbances, induced by radio-frequency fields	EN 61000-4-6	10 V; 0,15-80 MHz
Electrical fast transient / burst immunity test	EN 61000-4-4	±2 kV
Surge immunity test	EN 61000-4-5	±0,5 kV (common) ±0,5 kV (differential)
Electrostatic discharge (ESD) immunity test	EN 61000-4-2	air: 8 kV with contact: 4 kV

# Technical explanations for pressure transmitters

## Conversion chart for pressure units

Abbreviation for unit	Name of unit	Pa = N/m <sup>2</sup>	bar	Torr	lbf/in <sup>2</sup> , PSI
1 Pa = N/m <sup>2</sup>	Pascal	1	0.00001	0.0075	0.00014

1 Torr = 1 mmHg	Millimeters of mercury	133.322	0.00133	1	0.01934
1 lbf/in <sup>2</sup> = 1 PSI	Pound-force per square inch	6894	0.06894	51.71	1

## Conversion chart for temperature units

	K	°C	F
K	1	K - 273.15	9/5 K - 459.67
°C	°C + 273.15	1	9/5 °C + 32
F	5/9 (F + 459.67)	5/9 (F - 32)	1

### Insulation strength

According to the latest specifications for immunity to surges and lightning protection, the following must be taken into account when testing insulation strength: With insulation test devices having an inner resistance exceeding 42 Ω, the insulation strength of pressure transmitters can be tested up to 500 VDC.

All contacts must be tested short-circuited against the housing. For a specific threshold value of test voltage, the protective circuit for surge protection is activated without any defects arising within the circuit. In the process, the current may rise to a point at which an insulation strength fault is indicated. The recommendation therefore is to conduct the insulation test of the pressure transmitter when it is removed, or independently of the overall system.

### Medium compatibility

The specifications on medium compatibility in this catalogue pertain to the specific seal and housing materials as well as the used measuring cell technology and so cannot be generalised.

### Stainless steel (1.4301 / AISI 304)

Stainless steel with broad level of media compatibility, such as water, steam, humidity and weak organic and inorganic acids

### Stainless steel (1.4305 / AISI 303)

Stainless steel with broad level of media compatibility. Also suitable for oxygen and hydrogen applications.

### Stainless steel (1.4404 / AISI 316L)

Stainless steel with broad level of media compatibility. Also suitable for chemical industry and sea water applications.

### Titanium

Its high levels of mechanical resistance and the wide media compatibility – in particular to corrosive media – do make titanium the ideal material for measuring cells and membranes. It is not recommended for oxygen or hydrogen applications.

### Oxygen and hydrogen

It is recommended to use an EPDM seal for the media oxygen / hydrogen to be monitored.

The EPDM seal of the „Performance“ series (pp. 144-147) was successfully tested at the BAM (Federal Institute for Materials Testing) up to 250 bar by means of an oxygen pressure shock test at 60 °C.

EPDM must not come into contact with oil, as this results in swelling and softening of the material and thus the failure of the transmitter.

Country-specific safety requirements and application guidelines must be observed if the medium to be monitored is oxygen or hydrogen, such as DGUV accident prevention regulations (DGUV 500, Section 2.32 and BGI 617).

**Please specify when ordering „for oxygen, oil and grease-free“ or order plasma cleaned and individually packaged transmitters (see also „Plasma cleaning for oxygen applications / LABS-free (PWIS-free)“ on page 9).**

### Pressure peak dampening

If required, our pressure transmitters can also be fitted with a pressure snubber (pressure peak orifice) to protect the measuring cell against transient pressure loads such as pressure peaks due to the switching of valves, cavitation effects, etc. which can shorten life expectancy.

For liquid media, the hole of a pressure snubber cannot be chosen to be any small size. At low temperatures the viscosity of the media will increase. In a case of dropping pressure the media might remain in the cavity behind the snubber which might affect the functionality of the pressure transmitter. Thus a bore diameter of 0.8 mm has been established.

### Product information

The technical information in this catalogue is based upon fundamental testing during product development, as well as upon empirical values. The information cannot be used for all application scenarios.

**Testing of the suitability of our products for a specific application (e.g. also the checking of material compatibilities) falls under the responsibility of the user. It may be the case that suitability can only be guaranteed with appropriate field testing.**

**Subject to technical changes.**

# Pressure transmitters, Performance series

hex 24

- Very attractively priced electronic pressure transmitters
- High overpressure protection (up to 2 x)
- Small, compact transmitters
- High level of adaptability to your requirements (custom solutions)
- Ceramic sensor in thick film technology
- Housing made of stainless steel (1.4305), others on request
- Available as 'plasma cleaned for oxygen applications'<sup>1)</sup>

<sup>1)</sup> For oxygen applications, the EPDM diaphragm can only be used up to 250 bar and a media temperature of max. +60°C.

<sup>1)</sup> Static pressure, dynamic pressure 30 to 50% lower. Values refer to the hydraulic or pneumatic part of the pressure transmitter.  
<sup>2)</sup> Other compound pressure ranges on request.  
<sup>3)</sup> For oxygen applications, the EPDM diaphragm can only be used up to 10 bar and a media temperature of max. +60°C.

## Pressure transmitters High-Performance series

Silicon-on-sapphire sensor technology (SoS), hex 22

- Outstanding overpressure protection (up to 4 x)
- Ideal choice for mobile hydraulic applications
- Long service life even under high pressure change rates
- Wetted parts made of stainless steel and titanium ensuring excellent media compatibility
- All welded design, no elastomeric seal
- Silicon-on-sapphire technology (SoS) for highest reliability, accuracy and reliable process monitoring
- Very low temperature error and very good long-term stability
- Customer specific solutions available on request

# Pressure transmitters

# Thread adapters

For requirements at short notice and for realising custom solutions

- The materials and shapes of thread adapters are aligned perfectly to our electronic pressure switches and transmitters
- Thread adapters are provided together with seals to ensure safe and easy installation of our electronic pressure switches and transmitters

**For G1/4 DIN EN ISO 1179-1 (DIN 3852-E)**  
SUCO thread code 41, transmitters and electronic pressure switches

# SUCO Transmitter Display STD

- For pressure transmitters with 4 – 20 mA current output
- Suitable for pressure, temperature, level, force or flow indication
- Connection to DIN EN 175301-803-A (DIN 43650)
- Switching output option available (NO)

## Technical details

Display:	LED, red, 4-digits, rotatable (4x90°)
Display range:	-999 ... 9999
Input signal:	4 ... 20 mA, 2-wire
Standard display:	4.00 ... 20.00 (pre-set at factory)
Accuracy:	0.2 % FS ±1 digit
Supply voltage:	17 ... 32 VDC
Max. loop current:	60 mA
Sampling rate:	300 ms – 25.5 s (configurable with filter)
Switching output (for STD1 and STD3):	PNP transistor output 90 mA (P-MOSFET) Embedded overcurrent protection
Hysteresis (for STD1 and STD3):	constant value 3 digits of pre-setting (e. g.: switching point = 20.0 psi, hysteresis = 0.3 psi)
Programming:	2 programming buttons are located underneath the removable front panel
<b>Programming options:</b>	
Zero point setting:	-999 ... 9999
Range:	0 ... 9999
Decimal points:	3 positions or disable
Average filter:	0.3 ... 25.5 s
Overrun:	On / off
Switching point (for STD1 and STD3):	-999 ... 9999
Switch function (for STD1 and STD3):	NO
Save settings:	In EEPROM
Error messages:	If the overrun function is selected, „HI“ is shown on the display when 20 mA is exceeded. „LO“ is displayed when the current drops below 4 mA. When the overrun function is disabled, „ErC6“ is displayed as soon as the value is no longer in range -999 ... 9999.
Temperature range:	-10°C ... +60°C
Housing material:	ABS / acrylic (display window)
Protection class:	IP65 when fitted
Electrical connection:	DIN EN 175301-803-A (DIN 43650)
Attachment screw:	Included in the delivery

## ESI Sensor Technology

# ESI Technology Ltd

The worldwide specialist for customised high precision electronic Pressure sensors

For decades, ESI Technology with headquarters in Wrexham (UK) has served its customers with consistent product development, special engineered solutions and outstanding technical service and sales support.

In 2009 ESI Technology Ltd was acquired by SUCO. Since then ESI stands for Electronics, Sensors and Instruments. By forming part of a bigger organisation, yet keeping its own independence, ESI has gained the strength to expand its sales efforts and services worldwide.

ESI Technology has become one of the leading suppliers for specialised Pressure sensors by offering bespoke solutions for specific applications.

With a dedicated manufacturing and engineering facility in Wrexham, ESI serves an extensive range of major industries such as Oil and Gas, Subsea, Aerospace, Process, Test and Calibration.

Being one of the key suppliers to these industries requires high performance not only of its products. From design and sourcing through to shipment and customer service, ESI's Management System is approved to ISO 9001:2008.

ATEX, IECEx and DNV-GL approvals are also available for a wide range of products.

Throughout the product range, ESI uses a variety of state of the art sensor technologies to make each product a perfect fit to the desired application.

Though, the jewel of ESI's sensor technologies is Silicon-on-Sapphire which has redefined the performance capability of Pressure monitoring products.

Additional services, such as tailoring of the existing product range to suit application requirements, product conditioning such as ESS (Environmental Stress Screening) and product documentation packaging, make ESI the perfect partner for customers who need a bespoke service.

With a wide sales network, ESI Technology is able to deliver its' special services globally.

If you can't find the suitable solution on the following pages, please do not hesitate to contact the ESI Technology sales team or one of its partners which is worldwide at your site.

We are looking forward to supporting you!

# Pressure Sensors Overview

For full information, please ask for our brochure  
ESI - Electronic Pressure Sensors

## S.01 High-Pressure Transmitter

<b>Pressure Ranges:</b>	<b>0 – 600 bar; 0 – 1,000 bar; 0 – 1,500 bar; 0 – 2,000 bar; 0 – 3,000 bar; 0 – 4,000 bar; 0 – 5,000 bar (other ranges possible)</b>
Sensor Technology:	Silicon-on-Sapphire (SoS)
Accuracy:	$\leq \pm 0.25$ % FS typ. max., BFSL
Output Signal:	10 mV/V or 0 – 5 V or 0 – 10 V or 4 – 20 mA
Wetted Parts:	All titanium, machined from a single piece
Process Connection:	Autoclave F250-C female; M16 x 1.5 female
Option:	ATEX / IECEx (available only for 4 – 20mA), includes mining areas (Group I M1), DNV-GL certified option
Types:	HP1000; HP1001; HP1002; HP1003; HP1011; HP1012; HP1100; HP1101; HP1102; HP1103; HP1111; HP1112

## S.02 Low-Pressure Transmitter

<b>Pressure Ranges:</b>	<b>0 – 50 mbar; 0 – 100 mbar; 0 – 250 mbar; 0 – 500 mbar 0 – 1,000 mbar (other ranges possible)</b>
Sensor Technology:	Piezoresistive Silicon Sensor
Accuracy:	$\leq \pm 0.5$ % FS typ. max., BFSL
Output Signal:	10 mV/V (typ.) or 0 – 5 V or 0 – 10 V or 4 – 20 mA
Wetted Parts:	Stainless steel (SAE 316L) with O-ring
Process Connection:	¼" BSP (G ¼); ½" BSP; ¼" NPT; ½" NPT; (all male) (others on request)
Types:	LP1000; LP1001; LP1002; LP1003; LP1011; LP1012

## S.03 High-Precision Pressure Transducer

Pressure Ranges:	0 – 500 mbar to 0 – 1,500 bar
Sensor Technology:	Silicon-on-Sapphire (SoS)
<b>Accuracy:</b>	<b><math>\leq \pm 0.1</math> % FS typ. max., BFSL</b>
<b>Temperature Effects:</b>	<b><math>\pm 1.0</math> % FS max. thermal error band over -20 °C ... +70 °C</b>
Output Signal:	10 mV/V (typ.) or 0 – 5 V or 0 – 10 V or
Wetted Parts:	All Titanium
Process Connection:	¼" BSP (G ¼); ¼" NPT; (all male)
Electrical Connection:	MIL-C-26482 6 pin Bayonet or 1 m PTFE cable
Option:	ATEX / IECEx (available only for mV output), includes mining areas (Group I M1)
Types:	HI2000; HI2001; HI2002; HI2010; HI2011; HI2012

# Pressure Sensors Overview

## S.0 High-Temperature Pressure Transmitter

<b>Temperature Ranges:</b>	<b>Media temperature up to 250 °C</b>
Pressure Ranges:	0 – 1 bar up to 0 – 1,500 bar
Output Signal:	10 mV or 4 – 20 mA
Process Connection:	¼" BSP (G ¼); ¼" NPT; (all male) or ½" BSP flush diaphragm
Electrical Connection:	MIL-C-26482 6 pin Bayonet; 1 m PTFE cable; DIN EN 175301
Option:	ATEX / IECEx, includes mining areas (Group I M1)
Types:	HI2200; HI2210; HI2300; HI2310; HI6000; HI6001; HI6002; HI6003; HI6301; HI6302; HI6010; HI6011; HI6012; HI6013; HI6311; HI6312; PR3860; PR3861; PR3862

## S.05 USB-Transducer

<b>Pressure Ranges:</b>	<b>-1 – 2.5 bar; 0 – 16 bar; 0 – 100 bar; 0 – 400 bar; 0 – 1,500 bar; 0 – 2,000 bar; 0 – 4,000 bar; 0 – 5,000 bar</b>
Sensor Technology:	Silicon-on-Sapphire (SoS)
Accuracy:	≤ ±0.15 % of span BFSL
Output Signal:	USB-Interface, power supply and data transfer via USB Mini B
Wetted Parts:	All titanium
Process Connection:	¼" BSP (G ¼); ¼" NPT; (all male) or Autoclave F-250-C female;
<b>Sample Rate:</b>	<b>up to 1,000 Hz</b>
Types:	GS4200-USB; GD4200-USB

## S.06 Submersible Depth / Level Pressure Transmitter

<b>Pressure Ranges:</b>	<b>0 – 1 mWG up to 0 – 500 mWG (other Pressure ranges available)</b>
Accuracy:	≤ ±0.3 % of span BFSL
Output Signal:	4 – 20 mA (other options on request)
Electrical Connection:	Vented Cable
Option:	ATEX/IECEx, includes mining areas (Group I M1), DNV-GL certified option
Types:	PR3420; PR3441; PR3442

## S.07 Flush Diaphragm Pressure Transmitter

<b>Pressure Ranges:</b>	<b>0 – 200 mbar up to 0 – 400 bar</b>
Sensor Technology:	Thick Film Ceramic Sensor
Accuracy:	≤ ±0.3 % of span BFSL
Output Signal:	4 – 20 mA (other options on request)
Wetted Parts:	Stainless steel 316
Process Connection:	½" BSP; Pipe-clamp; DIN 11851; (other options on request)
Option:	ATEX / IECEx, includes mining areas (Group I M1)
Types:	PR3800; PR3801; PR3802; PR3820; PR3821; PR3822; PR3850; PR3851; PR3852; PR3860; PR3861; PR3862

### S.08 Intrinsically Safe Pressure Transmitter

<b>Certification:</b>	<b>ATEX / IECEx approved for explosion protection for flammable gases (zone 0), dusts (zone 20) and mining areas (group I M1)</b>
Pressure Ranges:	0 – 100 mbar up to 0 – 1,500 bar
Output Signal:	4 – 20 mA
Process Connection:	¼" NPT (female standard) or ½" BSP male (G ½)
Options:	DNV-GL certified option
Types:	PR3900; PR3110EX

### S.09 Special and Customised Solutions

- Application Specific Design Solutions
- Customised Housing Design
- Choice of Output Signals and Pressure Ranges
- Specialised Process Connections
- Various Electrical Connectors
- Special Housing Materials

### S.10 Oil, Gas and Subsea Solutions

- Dual Redundancy (Pressure Sensors and Electronics)
- Hyperbaric Testing to 3,300 m Depth
- Environmental Stress Screening (ESS)
- Bespoke Process Connections
- Extended Service life
- Special Housing Materials
- Comprehensive Documentation Package and Certification

### S.11 Differential Pressure Transmitter

Pressure Ranges:	0 – 5 mbar up to 0 – 200 bar
Accuracy:	±0.3 % of span BFSL
Output Signal:	4 – 20 mA (other options on request)
<b>Wetted Parts:</b>	<b>Suitable for liquids or gases</b>
Option:	ATEX / ECEX, includes mining areas (Group I M1)
Types:	PR3200; PR3210; PR3220; PR3230; PR3240; PR3202; PR3203; PR3204

### S.12 Accessories

- Panel Meter
- High Temperature Pressure Adapter
- Adapters for Process Connectors

			Output signal	No. of wires	Silicon-on-Sapphire (SoS)	Bonded Foil Strain Gauge	Ceramic Thick Film	Isolated Piezoresistive	Piezoresistive Silicon
<b>Protran</b> Differential	<b>PR3200</b>	High Pressure Transmitter up to 200 bar for liquid media, DIN EN 175301-803-A	4-20 mA	2	■				
	<b>PR3210</b>	High Pressure Transmitter up to 200 bar for liquid media, DIN EN 175301-803-A	0-5 V	4	■				
	<b>PR3230</b>	High Pressure Transmitter up to 200 bar for liquid media, DIN EN 175301-803-A	0-5 V	3	■				
	<b>PR3220</b>	High Pressure Transmitter up to 200 bar for liquid media, DIN EN 175301-803-A	0-10 V	4	■				
	<b>PR3240</b>	High Pressure Transmitter up to 200 bar for liquid media, DIN EN 175301-803-A	0-10 V	3	■				
	<b>PR3202</b>	Low Pressure Transmitter for air/non-corrosive gas with screw terminals	4-20 mA	2					■
	<b>PR3203</b>	Low Pressure Transmitter for air/non-corrosive gas with screw terminals	0-5 V	3					■
	<b>PR3204</b>	Low Pressure Transmitter for air/non-corrosive gas with screw terminals	0-10 V	3					■
<b>Protran</b> Flush Diaphragm	<b>PR3800</b>	Flush diaphragm Pressure Transmitter (pipe clamp), DIN EN 175301-803-A	4-20 mA	2			■	■	
	<b>PR3801</b>	Flush diaphragm Pressure Transmitter (pipe clamp), DIN EN 175301-803-A	0-5 V	4			■	■	
	<b>PR3802</b>	Flush diaphragm Pressure Transmitter (pipe clamp), DIN EN 175301-803-A	0-10 V	4			■	■	
	<b>PR3820</b>	Flush diaphragm Pressure Transmitter (DIN11851 / SMS / RJT), DIN EN 175301-803-A	4-20 mA	2			■	■	
	<b>PR3821</b>	Flush diaphragm Pressure Transmitter (DIN11851 / SMS / RJT), DIN EN 175301-803-A	0-5 V	4			■	■	
	<b>PR3822</b>	Flush diaphragm Pressure Transmitter (DIN11851 / SMS / RJT), DIN EN 175301-803-A	0-10 V	4			■	■	
	<b>PR3850</b>	Flush diaphragm Pressure Transmitter (1/2" BSP), DIN EN 175301-803-A	4-20 mA	2			■		
	<b>PR3851</b>	Flush diaphragm Pressure Transmitter (1/2" BSP), DIN EN 175301-803-A	0-5 V	4			■		
	<b>PR3852</b>	Flush diaphragm Pressure Transmitter (1/2" BSP), DIN EN 175301-803-A	0-10 V	4			■		
	<b>PR3860</b>	Flush diaphragm Pressure Transmitter up to 250 °C, DIN EN 175301-803-A	4-20 mA	2			■		
	<b>PR3861</b>	Flush diaphragm Pressure Transmitter up to 250 °C, DIN EN 175301-803-A	0-5 V	4			■		
	<b>PR3862</b>	Flush diaphragm Pressure Transmitter up to 250 °C, DIN EN 175301-803-A	0-10 V	4			■		
	<b>Protran</b> Submersible Depth / Level	<b>PR3420</b>	Submersible depth/level Pressure Transmitter, sludge platform, cable outlet	4-20 mA	2				■
<b>PR3441</b>		Submersible depth/level Pressure Transmitter, Ø 25 mm, cable outlet	4-20 mA	2				■	
<b>PR3442</b>		Submersible depth/level Pressure Transmitter, Ø 16 mm, cable outlet	4-20 mA	2				■	
<b>Protran</b> Oil & Gas	<b>HI5000</b>	Downhole Pressure Transmitter up to 2,000 bar, NACE-certified	4-20 mA	2	■				
	<b>PR3900</b>	Hazardous area Pressure Transmitter, ATEX / IECEx, cable outlet	4-20 mA	2	■				
	<b>PR3913</b>	Control valve Pressure Transmitter down to 3,000 m depth, cable outlet	4-20 mA	2	■				
	<b>PR3914</b>	Subsea Pressure Transmitter down to 6,000 m depth, cable outlet	4-20 mA	2	■				
	<b>PR3915</b>	Dual redundant subsea Pressure Transmitter down to 3,000 m depth, cable outlet	4-20 mA	2	■				
	<b>PR3920</b>	DP control valve subsea Pressure Transmitter down to 3,000 m depth, cable outlet	4-20 mA	2	■				
<b>Protran</b> Heavy Duty	<b>PR9000</b>	Process Pressure Transmitter up to 1,500 bar, screw terminal / P68 cable gland	4-20 mA	2	■			■	
	<b>PR9500</b>	Wireless Pressure Transmitter up to 1,500 bar, screw terminal / P68 cable gland	4-20 mA	2	■			■	
<b>Hipres</b> High Pressure	<b>HP1000</b>	High Pressure Transmitter up to 2,000 bar, DIN EN 175301-803-A	10 mV/V	4	■				
	<b>HP1001</b>	High Pressure Transmitter up to 2,000 bar, DIN EN 175301-803-A	0-5 V	4	■				
	<b>HP1011</b>	High Pressure Transmitter up to 2,000 bar, DIN EN 175301-803-A	0-5 V	3	■				
	<b>HP1002</b>	High Pressure Transmitter up to 2,000 bar, DIN EN 175301-803-A	0-10 V	4	■				
	<b>HP1012</b>	High Pressure Transmitter up to 2,000 bar, DIN EN 175301-803-A	0-10 V	3	■				
	<b>HP1003</b>	High Pressure Transmitter up to 2,000 bar, DIN EN 175301-803-A	4-20 mA	2	■				
	<b>HP1100</b>	High Pressure Transmitter from 2,500 to 5,000 bar, DIN EN 175301-803-A	10 mV/V	4	■				
	<b>HP1101</b>	High Pressure Transmitter from 2,500 to 5,000 bar, DIN EN 175301-803-A	0-5 V	4	■				
	<b>HP1111</b>	High Pressure Transmitter from 2,500 to 5,000 bar, DIN EN 175301-803-A	0-5 V	3	■				
	<b>HP1102</b>	High Pressure Transmitter from 2,500 to 5,000 bar, DIN EN 175301-803-A	0-10 V	4	■				
	<b>HP1112</b>	High Pressure Transmitter from 2,500 to 5,000 bar, DIN EN 175301-803-A	0-10 V	3	■				
	<b>HP1103</b>	High Pressure Transmitter from 2,500 to 5,000 bar, DIN EN 175301-803-A	4-20 mA	2	■				
<b>Lopres</b> Low Pressure	<b>LP1000</b>	Low Pressure Transmitter for air and liquid, DIN EN 175301-803-A	10 mV/V	4				■	■
	<b>LP1001</b>	Low Pressure Transmitter for air and liquid, DIN EN 175301-803-A	0-5 V	4				■	■
	<b>LP1011</b>	Low Pressure Transmitter for air and liquid, DIN EN 175301-803-A	0-5 V	3				■	■

# Order correctly - it's quite simple

## Explanation of SUCO article numbers

$p_{max}$ in bar	Adjustment range in bar	Tolerance at room temperature in bar	Male thread	Article number
---------------------	----------------------------	---	-------------	----------------

### 0170 Diaphragm pressure switches with spade terminals

$p_{max}$ in bar	Adjustment range in bar	Tolerance at room temperature in bar	Male thread	Article number
			G 1/4	0170 - 457 03 - X - 003 - YZ
			M 10x1 con.	0170 - 457 01 - X - 001 - YZ
			M 12x1.5 cyl.	0170 - 457 02 - X - 002 - YZ
100 <sup>1)</sup>	0.3 - 1.5	± 0.2	NPT 1/8	0170 - 457 04 - X - 318 - YZ
			NPT 1/4	0170 - 457 09 - X - 314 - YZ
			7/16-20 UNF	0170 - 457 20 - X - 301 - YZ
			9/16-18 UNF	0170 - 457 21 - X - 302 - YZ

**Article number:** 0170 - 457 04 - X - 318 - YZ

The first four digits indicate the type number:

Our example: **Diaphragm pressure switch with spade terminals, type 0170**

By these three digits, the type of construction and the setting range are determined.

Our example: **Overpressure safe up to 100 bar, adjustment range 0.3 - 1.5 bar.**

These two digits provide information about the desired thread.

Our example: **NPT 1/8.**

#### Important - Code for the seal material:

- 1** = NBR (Buna-N): hydraulic fluid, machine oil, etc.
- 2** = EPDM: water, brake fluid, ozone, acetylene, etc.
- 3** = FKM: hydraulic fluid, petrol/gasoline, etc.
- 4** = ECO (epichlorhydrin): air, oils, fats, fuels (used only in SUCO vacuum switches).
- 5** = EPDM-TW: drinking water (only in diaphragm,  $p_{max} \leq 35$  bar).
- 6** = FFKM: acids, diluted alkalis, ketones, esters, alcohols, fuels and hot water.
- 7** = TPE: hydraulic fluid, water, machine oil, heating oil, etc.
- 8** = **Silicone**: water, food products, air, etc. (only in diaphragm,  $p_{max} \leq 35$  bar).
- 9** = HNBR: hydraulic / machine oil, ester-based bio-oils.

The last three digits are reserved for further differentiation of the switch.

Our example: **318**

#### New - Code for the cleaning process (optional):

- C** = Plasma cleaning (e.g. oxygen applications)
- L** = LABS-free (PWIS-free)
- X** = no cleaning process

#### New - Diameter of the pressure snubber (optional):

- 5** = Pressure snubber  $\varnothing$  0.5 mm
- 8** = Pressure snubber  $\varnothing$  0.8 mm
- S** = Sinter filter
- X** = no pressure snubber

### Abbreviated coding explanation is embossed on the hex surface areas of the pressure switches.

Coding or way of short embossment on the switch body. Example: 0166 41203-1-047-C8, adjusted on rising 0.75 bar

Face front side:

SUCO part number, 12-digits (without leading zero)

**0166-41203-1-047**

Face back side:

- Set point, 1 to 4-digits (optional)  
e.g. 0.75 (bar), 1 (bar), 10 (bar), 100 (bar)
- Direction of set point, 1-digit (optional)  
↑ rising ↓ falling
- Cleaning process, 1-digit (optional)  
**C** = Plasma cleaning   **L** = LABS-/PWIS-free  
**X** = no cleaning
- Diameter of pressure snubber, 1-digit (optional)  
**5** =  $\varnothing$  0.5 mm      **8** =  $\varnothing$  0.8 mm  
**S** = Sinter filter      **X** = no pressure snubber
- Date of manufacturing (DDDY), 4-digits  
Day (D) 000 ... 365, Year (Y) acc. DIN EN 60062

valid from July 2020

# Questionnaire for Mechanical Pressure Switches

This questionnaire should be helpful to show, which information are important to give you a fast and detailed answer to your inquiry. Please fulfil as much points as you can; not all variations are implementable!
