Controller Overview

The controller model can be selected from an ultra-simple type, which is operable with the same controller as a solenoid valve, to a high functionality type that enables program control. A variety of models are available according to the customer's usage.

Controller types can be categorized according to the 3 groups below based on their operations.

Controller integrated type

EleCylinder

Gateway for network connection

REC

Controller for single axis

Position controller 24VDC/AC230V type

PCON/ACON/DCON/SCON

R-unit Series

Unit-linkage system position controller 24VDC/230VAC types

RCON

Controller for multi-axes

Position controller 24VDC type

MCON

Position controller AC230V type

MSCON

Program controller AC230V type

MSEL/SSEL/XSEL

Unit-linkage system program controller 24VDC/230VAC types

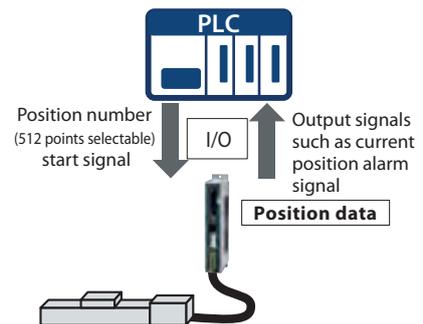

RSEL

Positioner Type

The positioner type stores positions to which the actuator is moved by specifying a target position number. Integration with existing devices is easy because existing air cylinder control signals can be used.

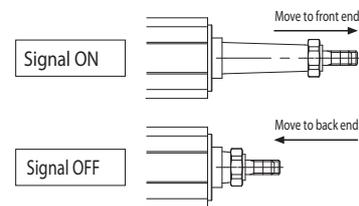

1 No programming needed

The positioner type controller operates by selecting the target position number externally using I/O after teaching the position data. Therefore, no operation programming is needed, allowing for immediate operation directly after mounting the equipment.

2 Operation using the same signal as solenoid valve possible (PCON/ACON/DCON/SCON controllers)

Same as single solenoid valve, traveling between front/back ends is possible only by the single ON/OFF.

3 Reasonable price

A reasonable price range is offered for the pulse motor type controllers which maintain the effective functionality of a servo motor.

4 Wide range of variations with full of functions

A wide range of variations offers the optimum type that best suits the usage, from a 2-point positioning band type that operates using the same signal as air cylinder's, to a 512-point positioning band type and a space-saving type that can connect up to 8 axes in one controller.

In addition, the actuator can provides its best performance thanks to the smart tuning and maintenance functions.

PCON/ACON/DCON/SCON/RCON/MCON/MSCON Controllers

- Positioning is possible for up to 512 points (Except for RCON, MCON and MSCON).
- Compatible with pulse train input control (Except for RCON, MCON and MSCON).
- PCON-CB, RCON and MCON provide 1.5 times of max. speed and 2 times of payload compared to conventional models when combined with RCP6, RCP5 and RCP4.
- ACON, SCON and MSCON provide max. 2G of acceleration/deceleration thanks to the off-board tuning function.
- MCON can accommodate max. 8 axes of actuators inside the compact cabinet.
- RCON is a unit connection system and can operate up to 16 axes of actuators.
- Setting of an absolute specification by PCON, ACON, SCON, MCON, RCON or MSCON, thereby requiring no home return.
 - Battery-less absolute type, absolute type using a battery and incremental type actuators can be used in a same way as an absolute type.
 - Simple absolute type is available (battery needed).
 - The absolute type varies depending on the controller type. Please refer to the relevant controller page.

Program Type

The program type controller executes programs that are loaded to it.

The programs loaded to the controller are used to perform various tasks such as operating the actuator and communicating with external equipment. Ideal for small systems whether a PLC is not required which leads to cost savings.

1 High-level control available using simple language

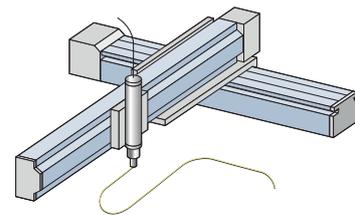

A program is generated for the program type controller using the simple and easy Super SEL Language to execute operation of the actuator and communication between peripheral equipment. Expert knowledge is not needed to use the Super SEL Language, so it's easy to create programs even for beginners.

No.	B	E	R	Cmd	Cond	Operand 1	Operand 2
1				HOME		100	
2				HOME		11	
3				VEL		200	
4				WTON		1	
5				MOVL		1	
6				OTON		301	
7				WTON		2	
8				BTOF		301	
9				MOVL		2	
10				BTON		302	

2 Interpolation possible up to 8 axes

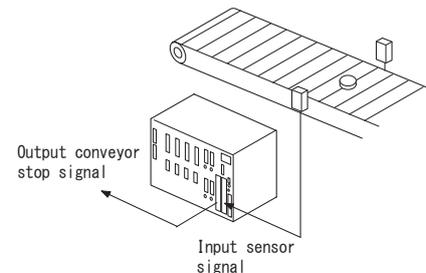

Simultaneous operations of actuators are possible for up to 2 axes for SSEL controller, up to 4 axes for MSEL controller and up to 8 axes for RSEL/XSEL controller, respectively.

Depending on the program, interpolation is available to easily perform dispensing.

3 Controlling external equipment is possible

Multi-purpose I/O signals are available for the controller which makes communication with peripheral equipment possible. Therefore, receiving signals from sensors and such through the controller or outputting signals from the controller to lamps or moving equipment, etc. to operate them is possible.

4 No homing needed for absolute type

Homing is not needed for the following combinations of the actuator and controller.

RSEL

* Battery-less absolute type actuator + controller (battery-less absolute specification).

* Incremental type actuator + simple absolute unit + controller.

SSEL/XSEL

* Battery-less absolute type actuator + controller (battery-less absolute).

* Absolute type actuator + controller (absolute spec)

MSEL

* Incremental type actuator + battery box + controller (simple absolute spec)

* Battery-less absolute type actuator + controller (battery-less absolute spec)

RSEL Controller

- Highly functional controller that enables simultaneous operations up to 8 axes.
- Different types of drivers can be combined thanks to the unit-linkage system.
- Driver unit can be shared with RCON.
- Supports control of cartesian type 6-axis robots.
- Possible to register positioning points up to 36000.
- Supports battery-less absolute encoder, simple abso unit, incremental encoder and quasi-abso encoder.

RSEL

See
P7-27/
P7-61

SSEL Controller

- Program controller with reasonable price and compact body.
- Interpolation of up to 2 axes is possible which is applicable for dispensing jobs.
- By selecting the positioner mode, it can be used in the same manner as the position controller.
- Communication via PC USB port and direct USB cable is possible with integrated USB port.
- Possible to register positioning points up to 20000.
- Absolute type available for ASEL/SSEL controllers can be set up as a battery-less type which requires no battery, or as an absolute type that uses a battery.
- Controller power supply is single-phase AC230V for SSEL.

SSEL

See
P7-243

MSEL Controller

- Actuator with built-in pulse motor can control up to 4 axes.
- Actuator with built-in battery-less absolute is compatible with RCP6, RCP5, RCP4 and IXP series.
- Positioning points is up to 30000 points.
- I/O (input/output) signals can be expanded up to 32 points.

MSEL

See
P7-257

XSEL Controller

- High-function controller with up to 8 axes that can be simultaneously controlled.
- Precise dispensing jobs are possible through high velocity uniformity and tracking accuracy.
- Absolute type available for selection.
- 55000 points can be stored for positioning.
- Expansion I/O is available up to a maximum of 384 points.

XSEL

See
P7-271

Network Compatibility

Compatible with the majority of main field networks widely used over the world.
It is also highly compatible with FA devices such as PLCs and touch panels.

1 Compatible with main field networks

Direct connection is possible with main field networks such as DeviceNet or CC-Link, etc.

A position controller is available for an operation defined by movement specified with position number and direct coordinate value using the network.

(When defining coordinate values directly, there is no restriction for the number of positioning points.)

(*1) When it is operated by movement by specifying direct values, the number of positioning points is unlimited.
(*2) Able to cope with EtherNet (TCP/IP: message communication) when switching the parameters for EtherNet/IP.
(*3) It corresponds to Ethernet (TCP/IP: message communication) only for standard Ethernet.

Network

3 Vision system

The XSEL controller can directly be connected to major vision systems to easily take in coordinate values and operate.

(1) Able to directly connect with major vision systems

It is possible to easily use sophisticated vision systems of specialized suppliers such as Omron, Cognex and Keyence.

Manufacturer	Applicable model	Communication method
OMRON	FH series	RS232C
COGNEX	In-Sight5000 series In-Sight EZ series	Ethernet
Keyence	CV-5000 series XG-7000 series XG-8000 series	RS232C Ethernet

* Please contact us for connection with vision systems other than listed above.

(2) No communication programs needed

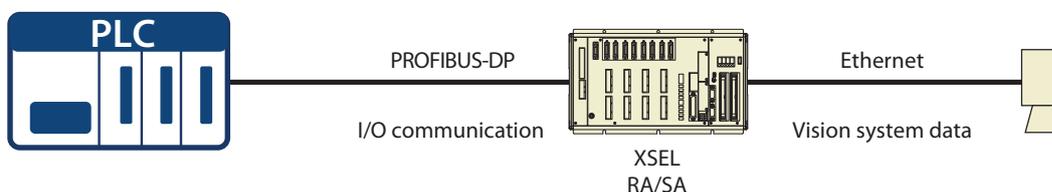

Coordinate values from the camera are stored as position data in the robot controller by dedicated instruction. Communication programs are not necessary.

(3) While communicating with a vision system via Ethernet, communication with another network is possible.

The XSEL-RA/SA type can communicate via DeviceNet, CC-Link or PROFIBUS-DP, while communicating via either EtherNet/IP or EtherCAT. It can be used for communication with a vision system via Ethernet, and with peripheral devices via PROFIBUS-DP using I/Os.

* XSEL-P/Q type can select one of the networks shown above.

Safety Category Compliant Types

<Compliance of controllers with the Safety category>

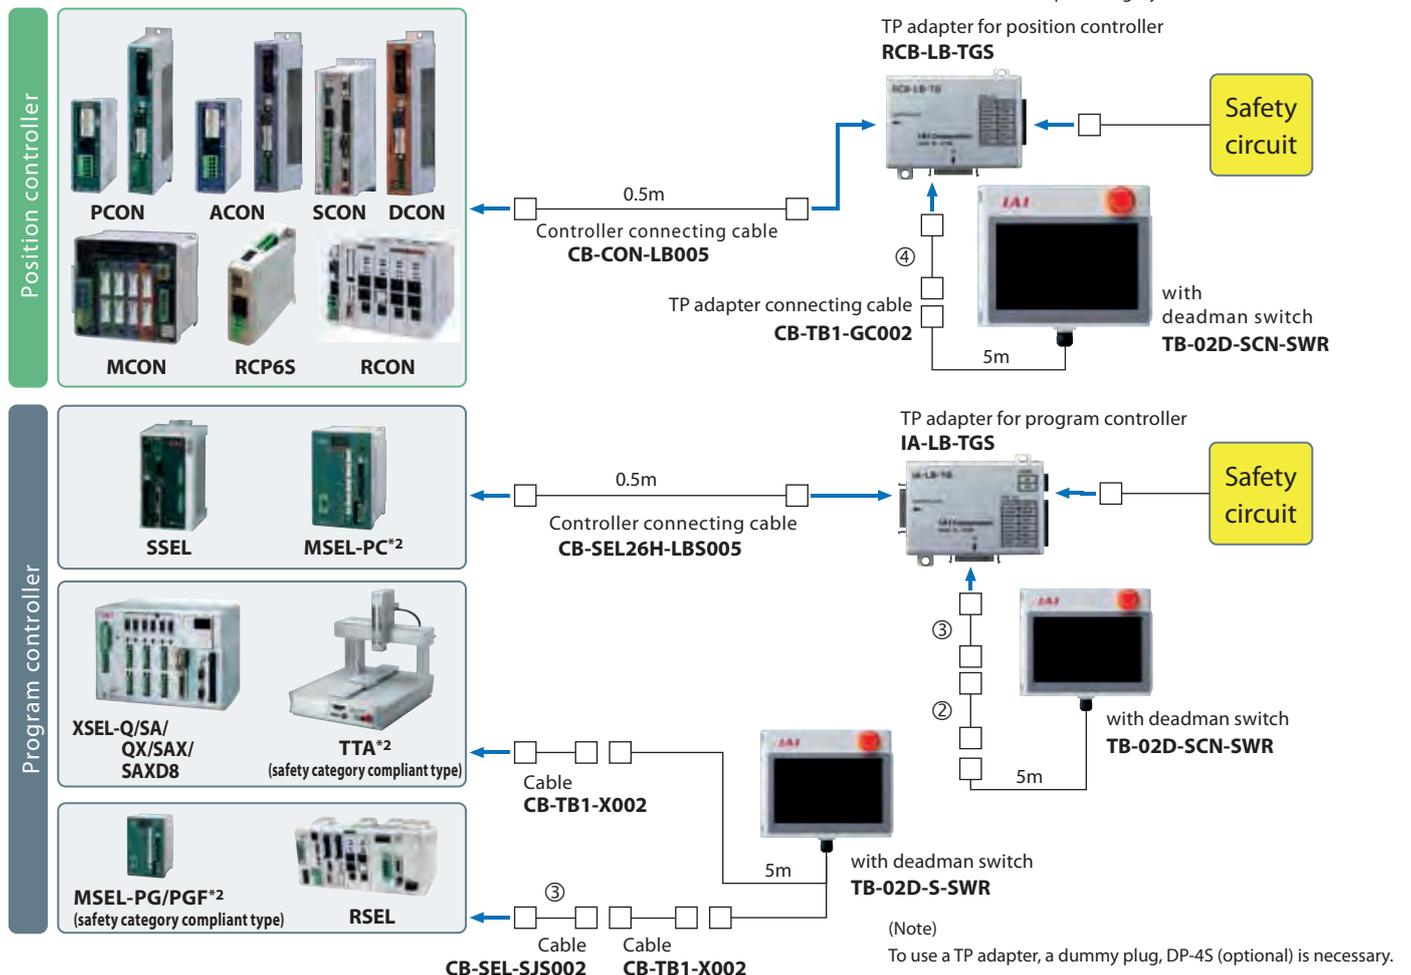

When building a system in compliance with the safety category (ISO 13849-1), use a touch panel teaching pendant (TB-02D) and a TP adapter (RCB-LB-TGS, IA-LB-TGS).

By changing the wiring of the system I/O connector, the safety category of up to B~4 (partially B~3) can be achieved.

Controller type	Safety category	ISO standard
RCP6S	B~4	ISO13849-1
RCON-GWG	B~4	
MCON-C/CG/LC/LCG	B~4	
PCON-CB/CGB/CFB/CGFB	B~4	
ACON-CB/CGB	B~4	
DCON-CB/CGB	B~4	
SCON-CB/CGB/CAL/CGAL/LC/LCG	B~4	
RSEL-G	B~4	
SSEL-CS	B~4	
MSEL-PC/PG/PGF	B~3	
XSEL-Q/SA/QX/SAX/SAXD8	B~4	
TTA	B~3	

■ The following chart shows the safety category compliance. Compliant with Safety Category of up to B~4 *1*2.

*1 Compliant with Category 4 when the dummy plug is attached.
*2 MSEL and TTA are up to category 3.

R-unit

Unit-linkage type controller

Positioner Type

RCON

R-unit

Program Type

RSEL

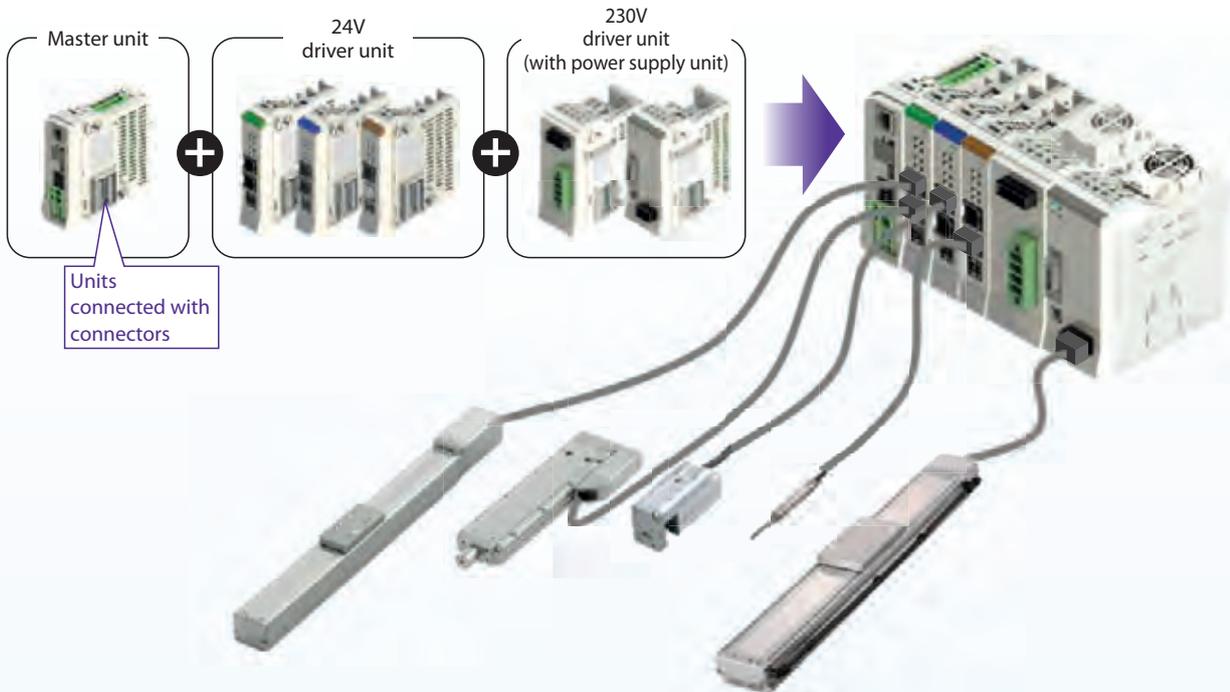

EleCylinder Drive Unit

REC

Unit-connecting controllers support a wide array of combinations!

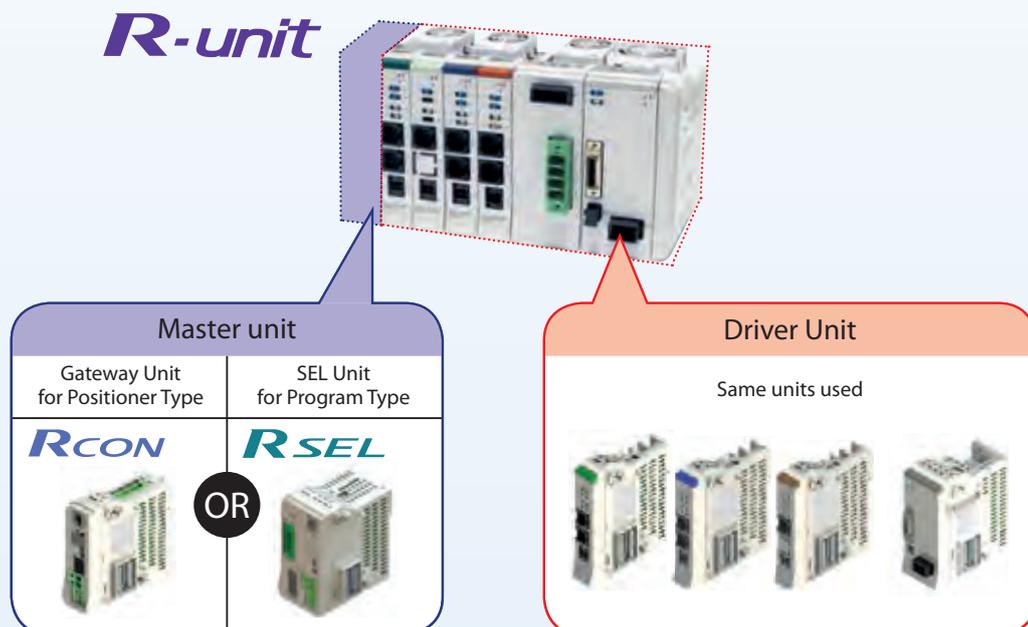

Combine a driver unit with the exact number of required axes for a more compact controller and reduced installation space.

This allows for mixed control of an actuator with both a 24V motor and 230V motor.

Use the same driver units

The system can be changed just by switching out the master unit based on the control method. This allows the same driver units to be used.

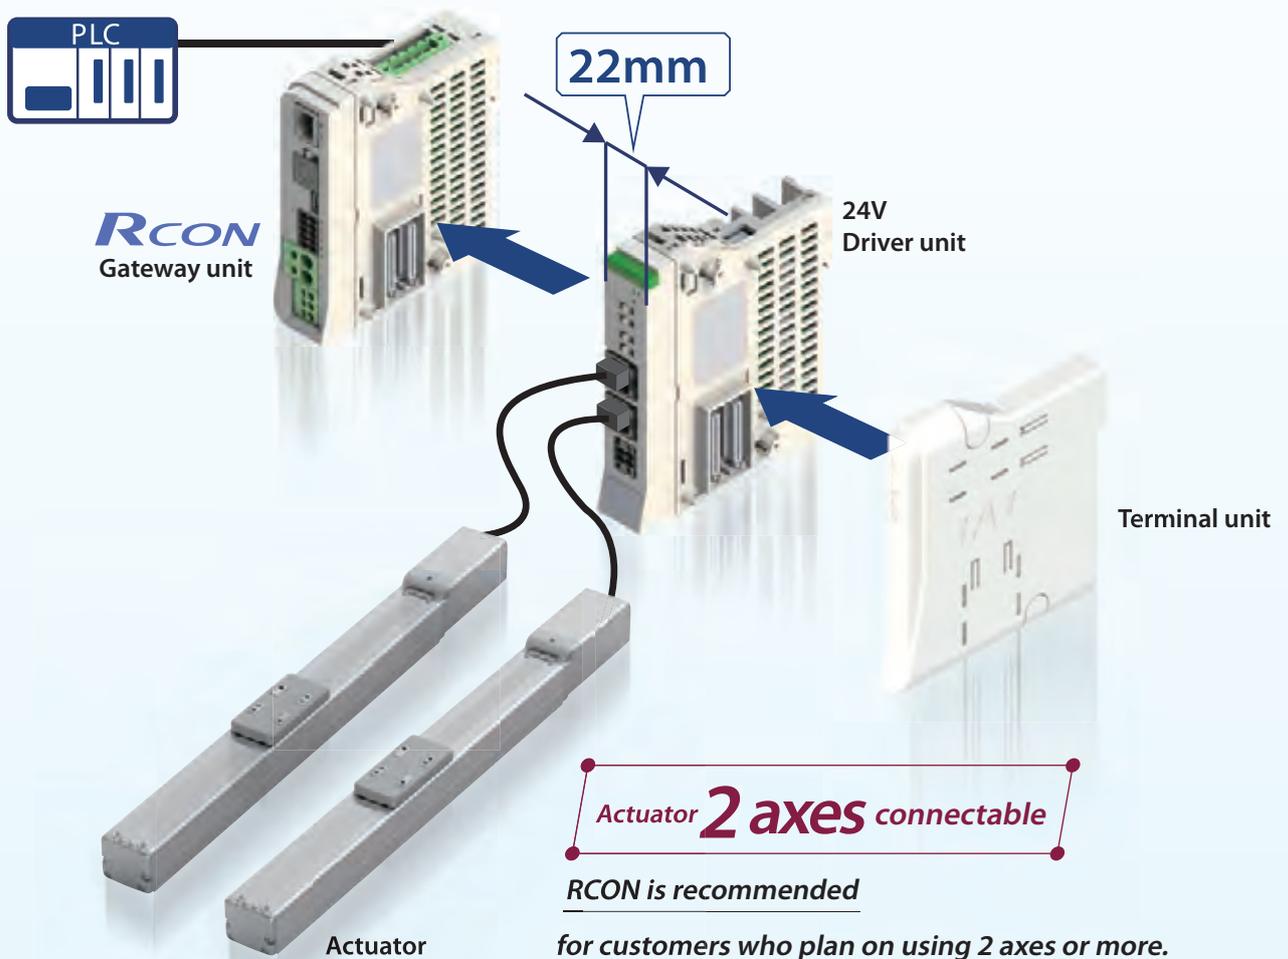

Saves space
inside the control panel

RCON

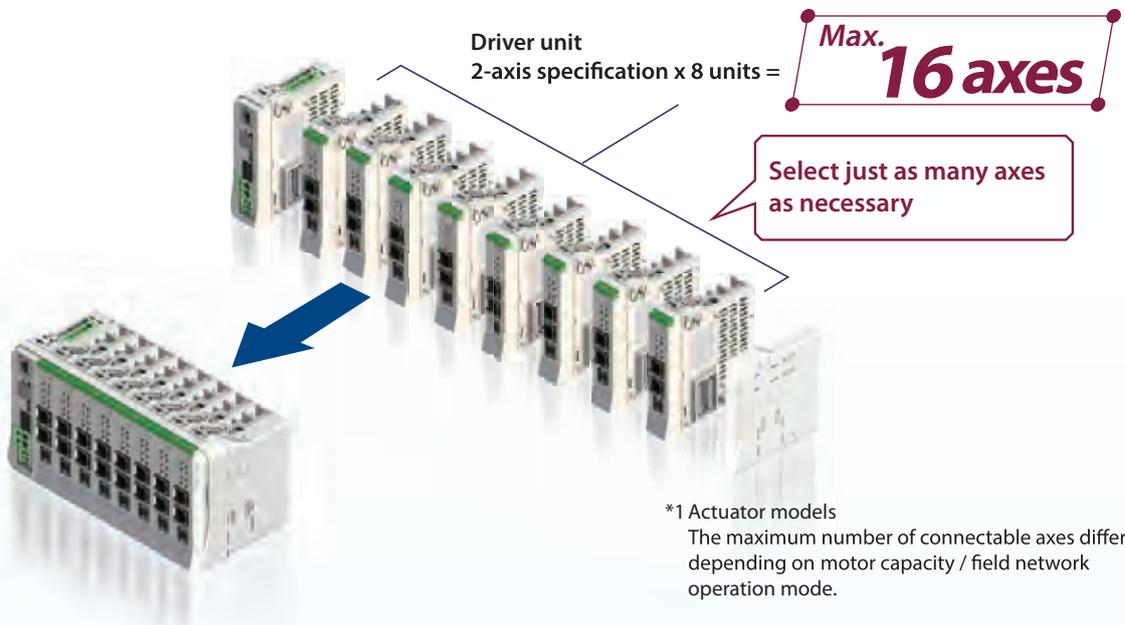

RCON is recommended for actuators with two axes or more.

Up to 2 axes of actuators can be connected to one driver unit with 22mm width, making it ideal for saving space in the control panel.

Up to 16 axes*¹ of actuators can be connected.

There will be no wasted space as only the necessary driver units will be added.

Saves up to 85%*² of control panel space and reduces costs by as much as 60%.

*2 IAI product comparison

Up to about 85% of control panel space can be saved, compared with models that connect a 1-axis actuator to a single driver unit.

The conventional type (Comparison example below) requires network options installed to match the number of controllers. RCON can control driver units for up to 16 axes of actuators with a single gateway, allowing cost reductions up to 60%. It is especially recommended when using multiple axes.

PCON-CB x 16 units

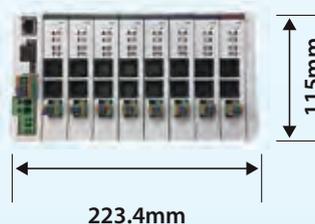

PCON-CB
PROFINET IO specification x 16 units

*3 Minimum distance required for natural heat dissipation of the controller

60% cost reduction

RCON x 16-axis connection specification

85% Space saving

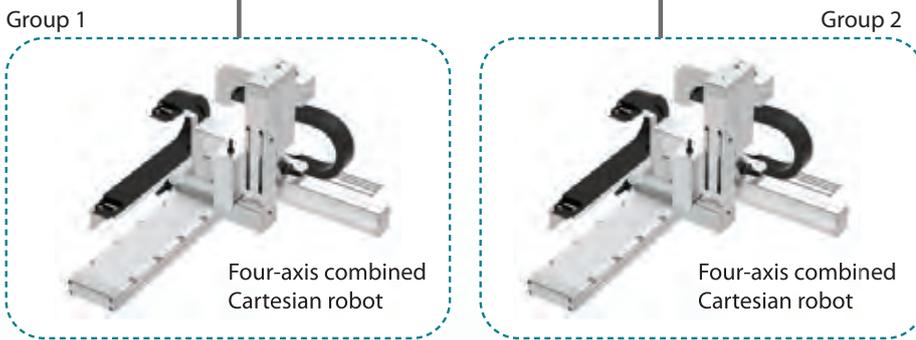

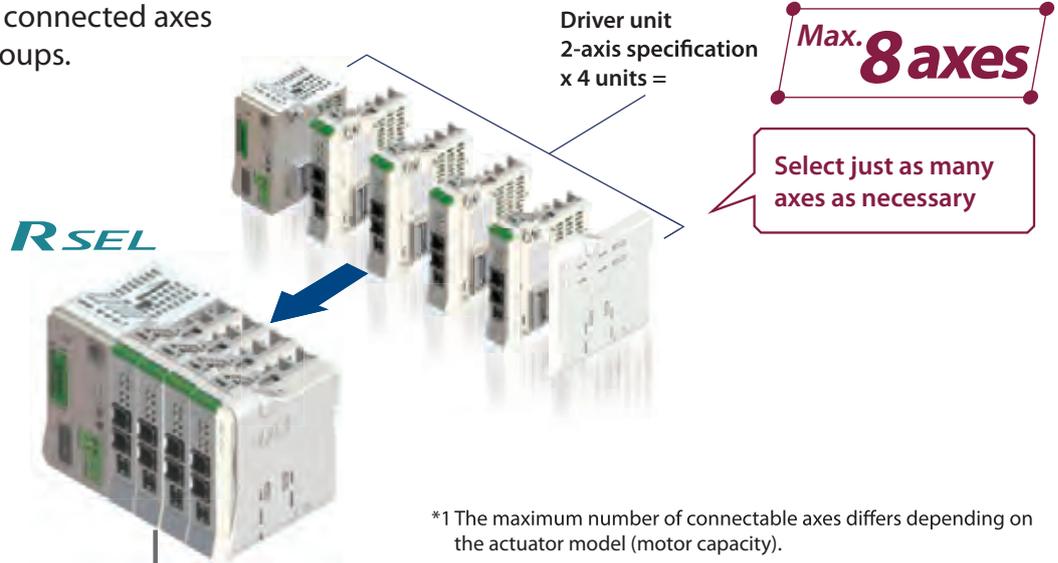

RCON
PROFINET IO specification
pulse motor 16 axes

RSEL

Compact program controller that connects up to 8 axes*1 of actuators

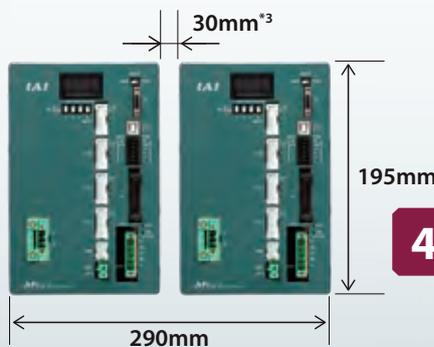

Supports both linear and arc interpolation operations.
Also allows control of connected axes to be split into two groups.

Max. 67%*2 space savings inside the control panel

Up to about 67% of control panel space can be saved, compared with models that connect a 4-axis actuator to a single driver unit.

MSEL x 2 units (8-axis connection)

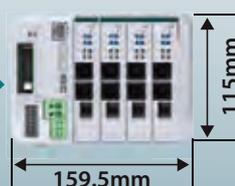

MSEL
PROFINET IO specification
8 axes (4 axes x 2 units)

43% cost reduction

*3 Minimum distance required for natural heat dissipation of the controller

RSEL x 8-axis connection specification

67%
Space saving

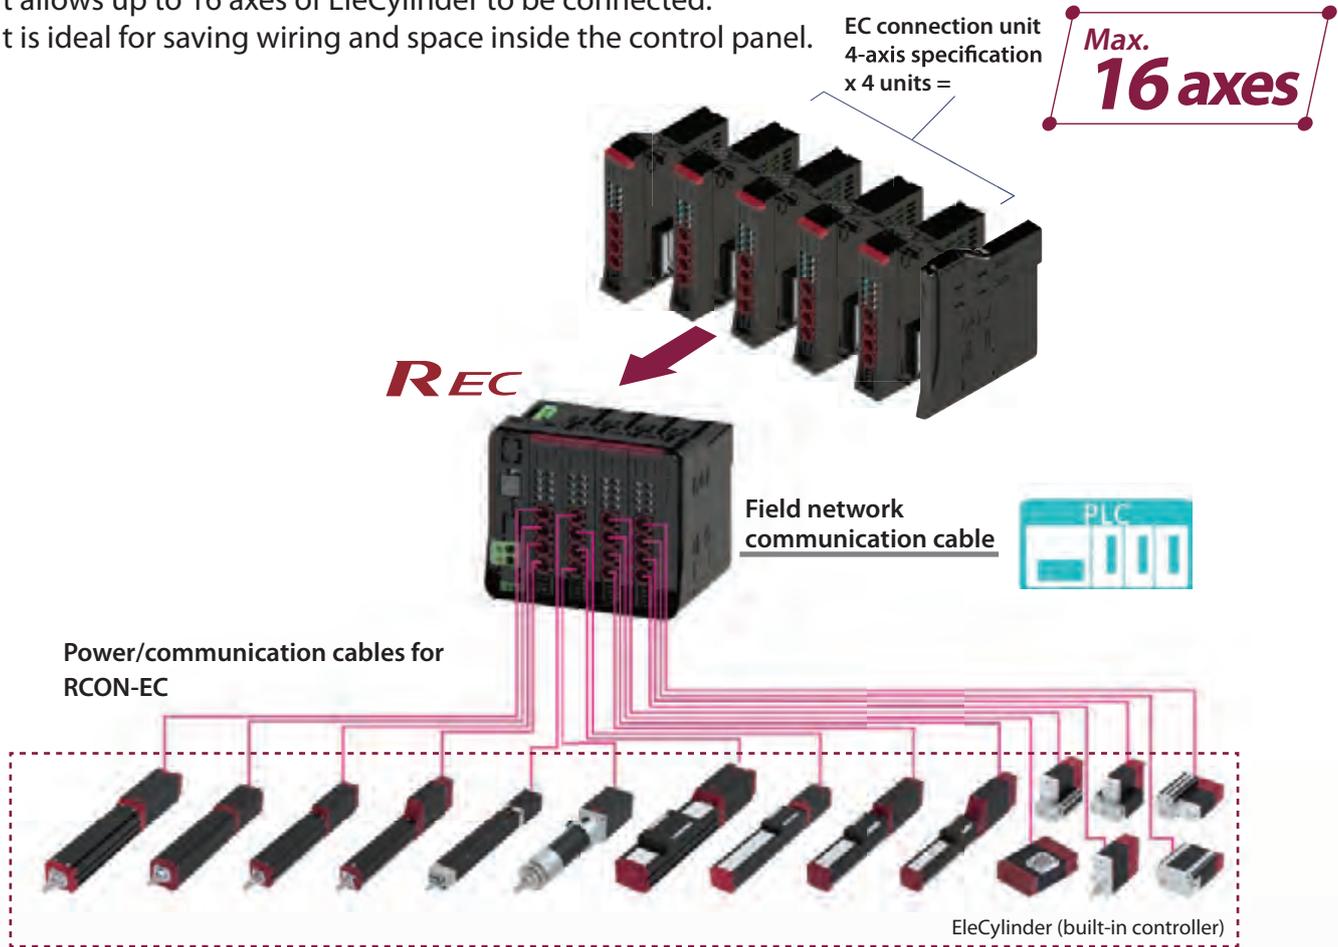

RSEL
PROFINET IO specification
pulse motor 8 axes

REC

Connect EleCylinder to a field network

This field network connection unit is specifically for use with EleCylinder. It allows up to 16 axes of EleCylinder to be connected. It is ideal for saving wiring and space inside the control panel.

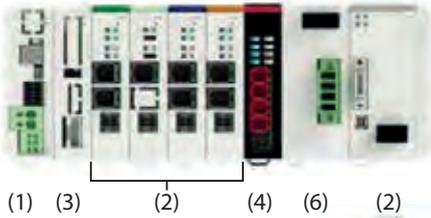

EC connection unit can be connected with other driver units connected to RCON

Connect to RCON to allow mixed connections with RoboCylinder and single axis robots.

System Configuration

Unit Configuration

The REC has a unit-connecting configuration. Every unit has the same connector and locking configuration. However, there are restrictions on unit arrangement. Connect each unit with these restrictions in mind. Connect each prepared unit in order starting from the left, with the EC gateway unit serving as the standard unit when looking at the front surface.

* The system will not operate normally if units are not connected in the following order.

Unit name	Number of connected units	Additional information
EC gateway unit	1	Placed at far left
EC connection unit	(Max.) 4	Can be rearranged within the unit area (max. number of connectable axes is 16 axes)
Terminal unit	1	Placed at far right

RCP6S with Built-in Controller

Built-in controller for RCS6S

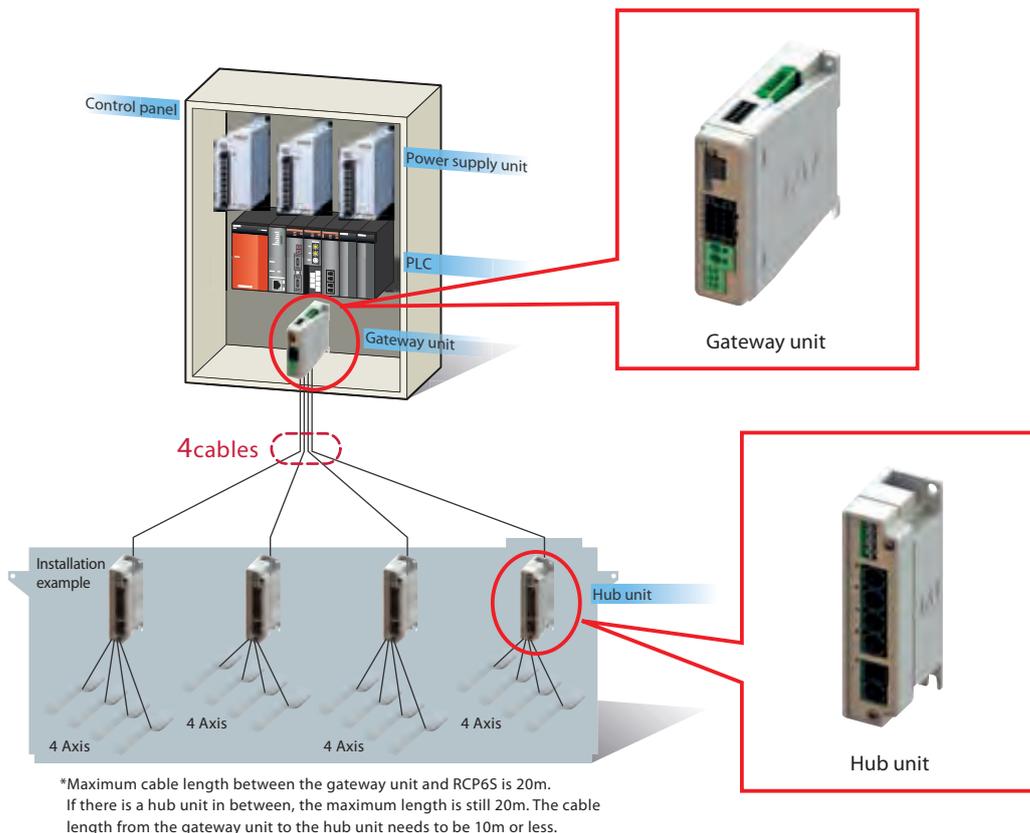

Features

By using the gateway unit, a maximum of 16 axes* of RCP6S (relayed through a hub unit) can be operated via a field network with less wiring.

Hub unit allows us to keep the cable connected to the actuator of each axis short, and motor power supply and control signal lines can be connected as one cable between the hub unit and the RCP6S.

* The number of connectable axes will vary depending on the type of field network and its mode. Please refer to P7-105 for details.

Control Panel for the RCP6S Built-in Controller Actuator

RCP 6S peripheral equipment

Gateway unit is required in order to operate RCP6S.

- Gateway unit: This unit is used in order to connect RCP6S to the field network. -> See P7-105
- Hub unit: This unit can expand the number of axes connected to the gateway unit. -> See P7-109
- PLC connection unit: This unit is used to connect RCP6S directly to the PLC using serial communication. -> See P7-110

Gateway Unit (RCM-P6GW)

Features:

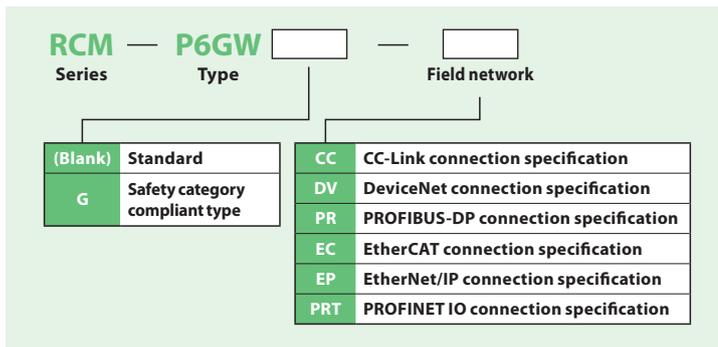

This unit is used in order to connect RCP6S to the field network.

Details:

- Compatible with many field networks. (Applicable networks: CC-Link, DeviceNet, PROFIBUS-DP, EtherCAT, EtherNet/IP, PROFINET-IO)
- Motor power and control power for all of the connected axes can be supplied through the gateway unit.
- Monitoring during AUTO is possible.
- A mini-USB connection comes standard.
- Each channel has MPO/MPI for drive source cutoff.
- Brake can be forcibly released by supplying power to the brake release input terminal for each channel. (In the case that the actuator is directly connected)
- When RCP6S is directly connected to the gateway unit, the communication time is 10msec. When RCP6S is connected to the gateway unit through the hub unit, the communication time is 40msec. The communication time does not become longer even if the connected axes increase.

* Dummy plug DP-5 is supplied with the safety category specification.

Connection Image

Up to 16 axes (*1) of RCP6S can be connected per gateway unit with hub units. (*2) Because both the motor power and control power for all the axes connected to the gateway unit can be supplied together, the required wiring for RCP6S can be connected as one cable between the hub and RCP6S. Also RCP6S can be directly connected to the gateway unit.

(*1) The number of connectable axes varies depending on the type of the field network. Please see "Number of connectable axes" table for details.

(*2) Hub unit: See P7-109.

The Number of Connectable Axes:

Maximum connectable axes are as shown below

	Direct value mode	Simple direct value mode	Positioner 1	Positioner 2	Positioner 3	Positioner 5
CC-Link	16	16	16	16	16	16
DeviceNet	8	16	16	16	16	16

EtherNet/IP	8	16	16	16	16	16
PROFINET IO	8	16	16	16	16	16

Hub Unit (RCM-P6HUB)

The hub unit cannot be used alone.
It must be used with a gateway unit.

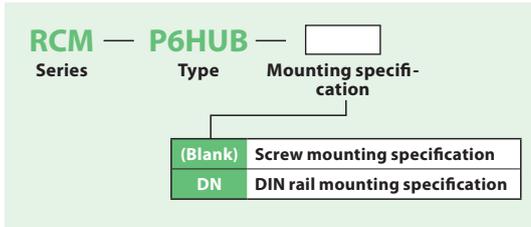

Features:

The connection between gateway unit - hub unit and hub unit - RCP6S can be established using serial communication. By using a gateway unit with hub units, up to 16 axes can be controlled.

* The number of connectable axes will vary depending on the type of field networks and its mode.
Please refer to P7-105 for details and confirm the "Number of connectable axes".

Model Configuration

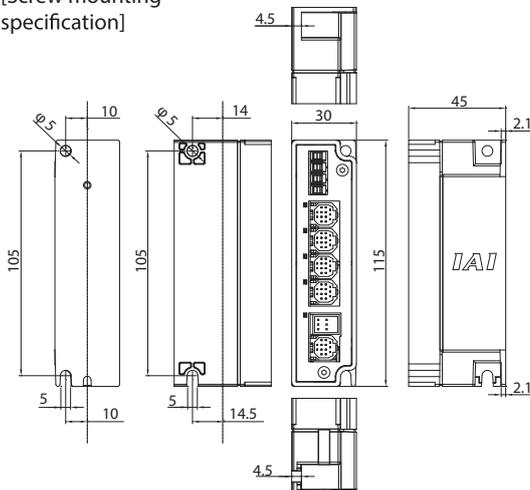

Specification

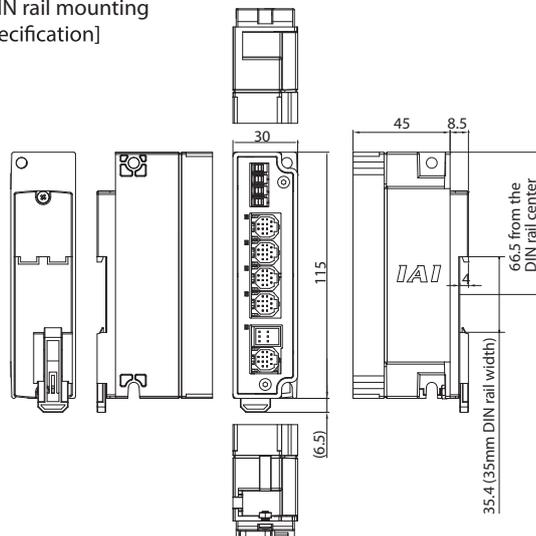

Specification	Description
Number of controlled axes	4 axes max.
Power supply voltage	24VDC±10%
Control power capacity	0.3A (single hub unit)
Motor power capacity	12.8A max. from connected axes
Emergency stop input	None
Enable input	None
LED display	SYS LED × 1 (RUN/ALM) AXIS LED × 4 (RUN/ALM)
Electromagnetic braking forced release mechanism	External brake release switch × 4
Electric shock protection mechanism	Class 1, basic insulation
Insulation withstanding voltage	500VDC 10MΩ
Contamination	Contamination 2
Weight	80g

PLC Connection Unit (RCB-P6PLC)

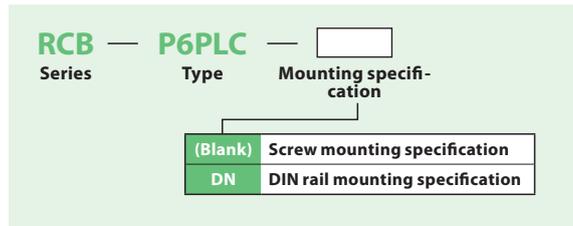

Features:

This is a terminal block used to connect the RCP6S and the PLC using serial communication.

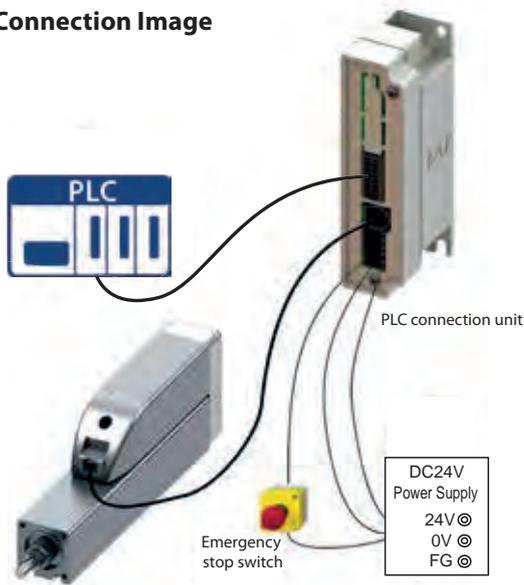

The RCP6S and the PLC connection unit can be easily connected with a cable.

* It cannot be connected to the gateway unit, hub unit or RCP6S gateway controller.

Model Configuration

Connection Image

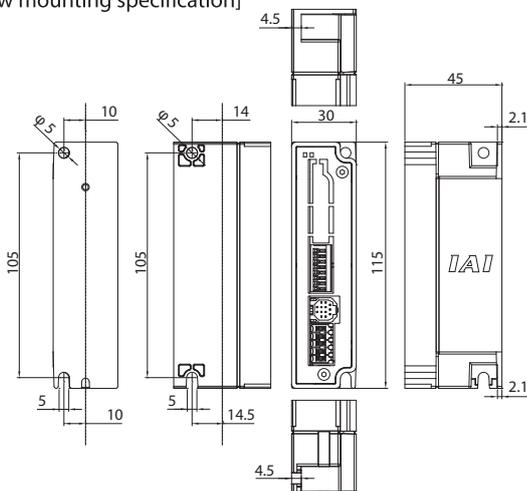

Specification

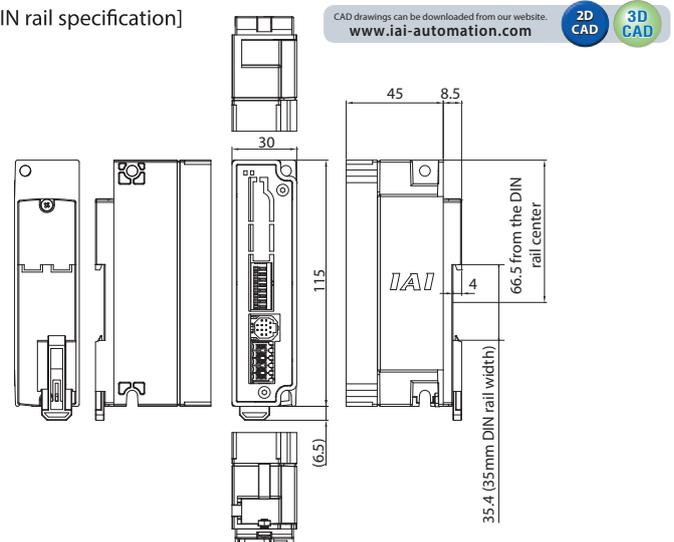

Specification	Description
Number of controlled axes	1-axis
Power supply voltage	24VDC ± 10%
Control power capacity	0A for single PLC connection unit 0.3A for connected PLC units + RCP6S built-in driver • For brake types, 0.7A for 0.2 sec is required for releasing brake
Motor power capacity	Depending on RCP6S built-in driver
Emergency stop input	B contact input
Enable input	None
LED display	None

MCON-C/CG

Multi-axis CON Series
Position Controller

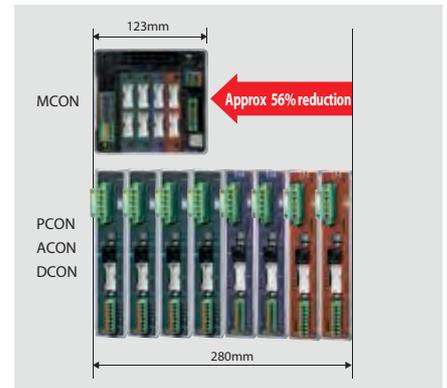

Features

Common to MCON-C / CG, MCON-LC / LCG

1 Saves space and reduces cost

It saves space in the control panel and significantly reduces the total cost by combining 8 controllers into one.

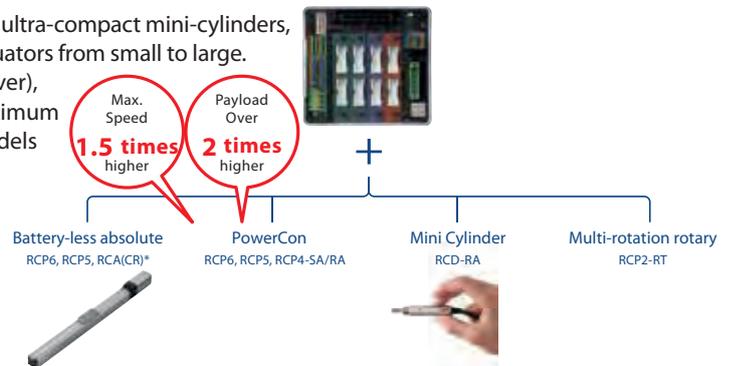

2 Accommodates a wide range of actuators

It corresponds to actuators with battery-less absolute encoders, ultra-compact mini-cylinders, multi-rotation rotaries and the like, expanding the operable actuators from small to large. In addition, it is equipped with the PowerCon (high-output driver), and achieves the maximum speed of 1.5 times higher and maximum load capacity of over 2 times higher than the conventional models by using in combination with the RCP5/RCP4.

Allows the installation of 7 types of driver boards

- ① Battery-less absolute/incremental driver boards for pulse motor
- ② Simple absolute driver board for pulse motor
- ③ Battery-less absolute/incremental driver boards for PowerCon
- ④ Simple absolute driver board for PowerCon
- ⑤ Battery-less absolute/incremental driver boards for AC servo motor
- ⑥ Simple absolute driver board for AC servo motor
- ⑦ Incremental driver board for brush-less DC motor

* Some models are excluded.
For more information, please refer to the catalog "AC Servo Motor RoboCylinder with Battery-less Absolute Encoder".

3 Many useful functions

Function of servo monitoring in the AUTO mode.

- The AUTO mode status monitoring and servo monitoring can now be performed using multi-axis controllers. In addition, the monitoring can start from the moment that the condition of a selected signal changed. (Trigger function)

The calendar function

- With the addition of the clock function, the alarm history is displayed with the time of occurrence, making it easier for the alarm to be analyzed.

Smart tuning function

- The optimum acceleration and deceleration are set according to the payload to be conveyed.

Off-board tuning function (for AC servo motor)

- The optimum gain is set according to the payload.

Vibration control function (for AC servo motor)

- It reduces the shaking (vibration) of the workpiece attached to the slider.

Acceleration/deceleration mode specification

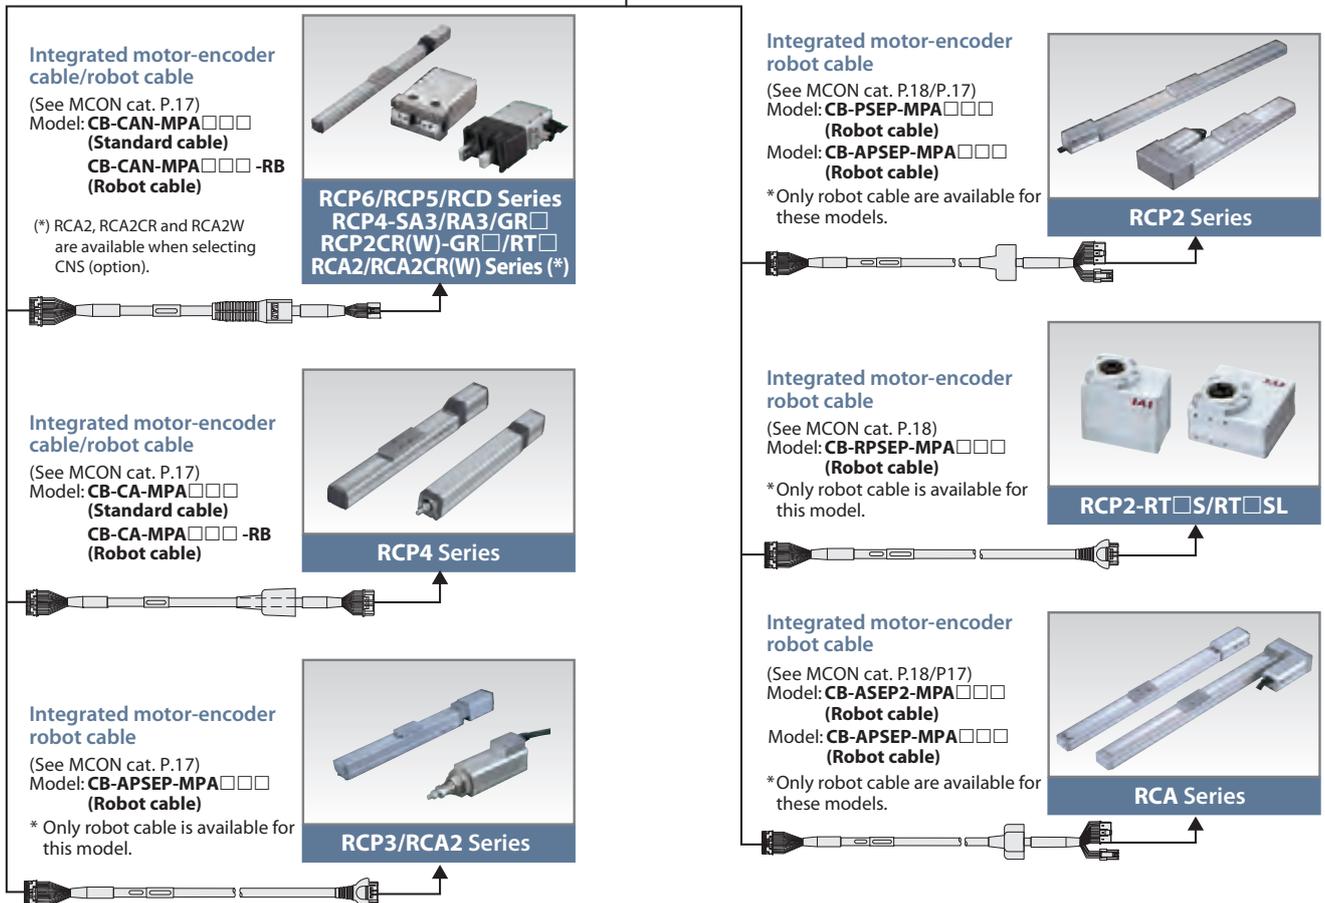

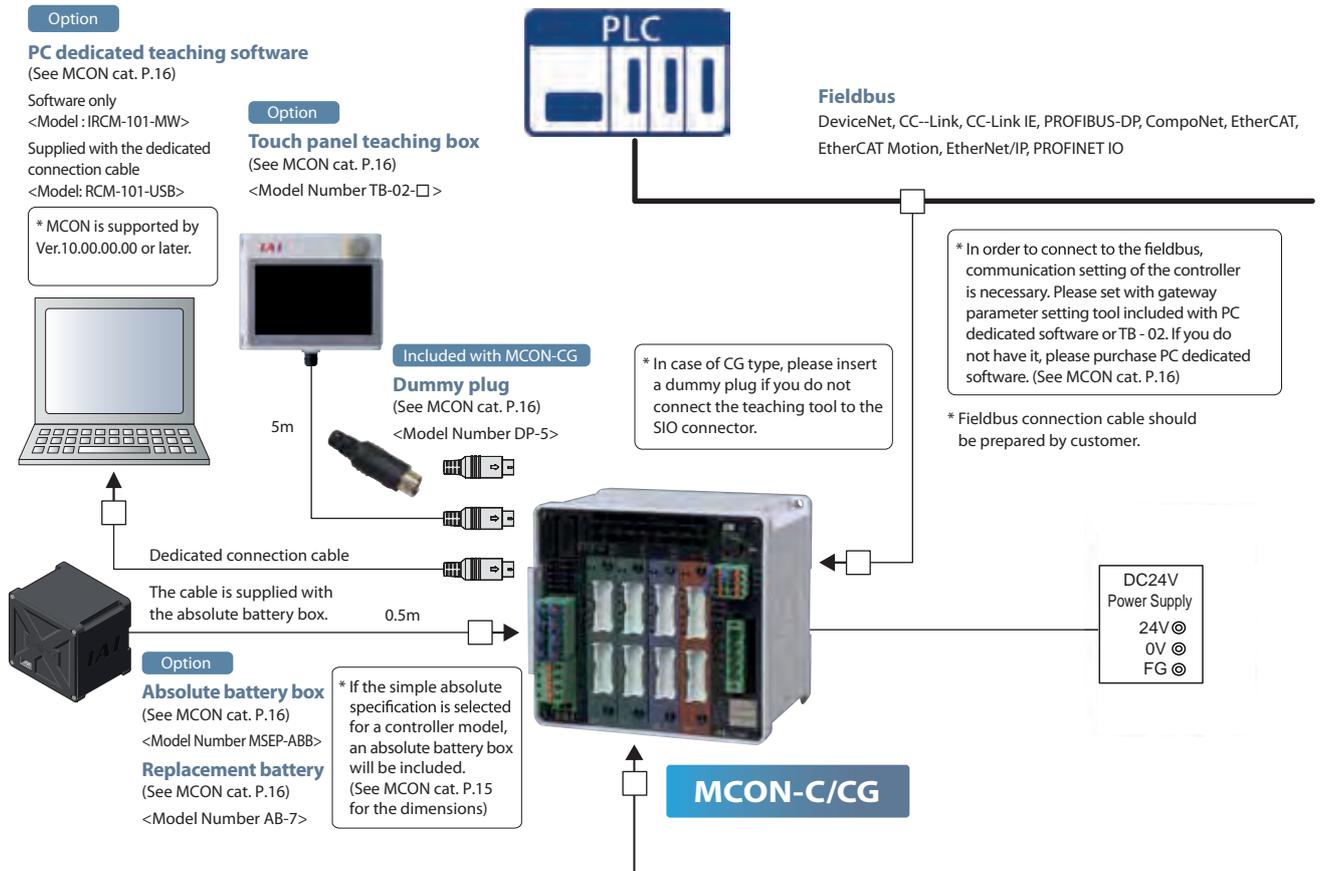

- The acceleration and deceleration patterns can be specified from the trapezoid pattern, first-order delay filter and S-shaped motion.

Axis name display function

- The axis name can be displayed in the PC dedicated software and touch panel teaching pendant.

* Some functions are not available depending on the network. Please refer to the instruction manual.

System Configuration

PCON-CB/CFB

The Position Controllers for RCP6/RCP5/RCP4 (PowerCon Type)
Position Controller for RCP3/RCP2

Features

1 High resolution Battery-less Absolute Encoder type

The RCP6 equipped with a high-resolution battery-less absolute encoder is supported. Since no battery is needed to retain position data, less space is required in the control panel, which in turn leads to lower cost of your equipment. The resolution is increased from 800 pulses /rev to 8192 pulses/rev.

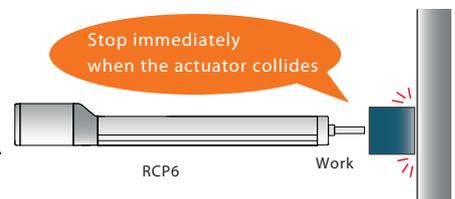

2 PowerCon Equipped

PowerCon (high-output driver) which can enable the stepper motor to perform at its maximum capacity is now installed. By using PowerCon, the output of the pulse motor is increased by 50%. It contributes to cycle time reduction and productivity improvement.

3 Collision Detection Function Equipped

This function stops the operation immediately when the actuator comes into contact with an object. The actuator stops without crashing, so that damage to the actuator can be minimized.

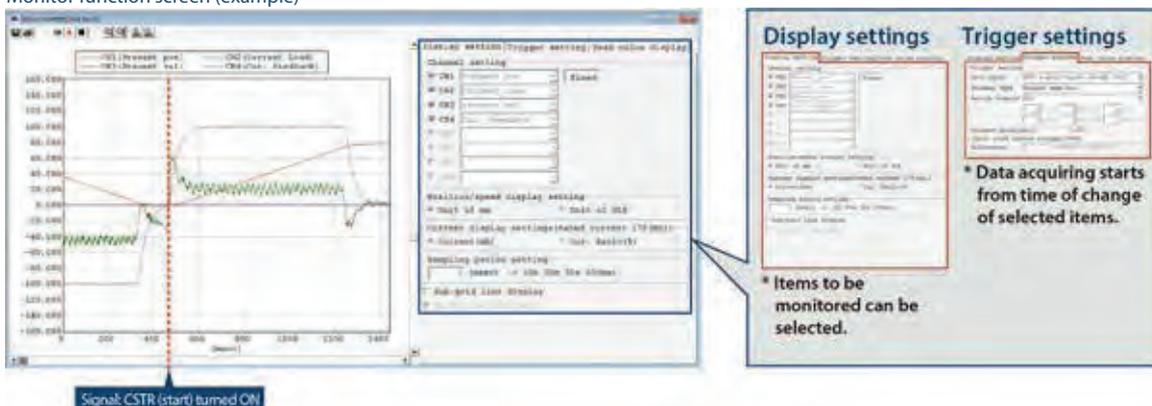

4 Enhanced Monitor Functions

The PC dedicated software can display information about the actuator and controller in operation as waveforms.

*Information that can be displayed: Command current value, current speed/position, and PIO signals (start, positioning completion, alarm, etc.)

Using the trigger function, the end user can specify a particular moment, either a change in PIO signals or a designated moment during the actuator's operation time, to begin displaying the waveforms.

PCON-CYB/PLB/POB

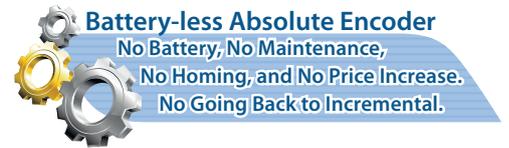

**Position Controller
for RoboCylinder**

Features

1 For products with battery-less absolute encoder

Battery maintenance is not required, since it does not need a battery. Home return is not required during the initial setting, after emergency stop output, or when the device is restarted after failure. Down time can be shortened, and manufacturing costs can be reduced.

2 PowerCon type

All controllers are compatible with the high-output driver "PowerCon" that can improve the performance of pulse motor output. It can shorten the cycle time and improve the productivity of the equipment.

3 Equipped with Smart tuning function

Supports the smart tuning function, allowing optimal setting of the speed and acceleration/deceleration values based on the payload. (*)

(*) When using the smart tuning function, PC dedicated software or TB-02 (touch panel teaching pendant) is required.

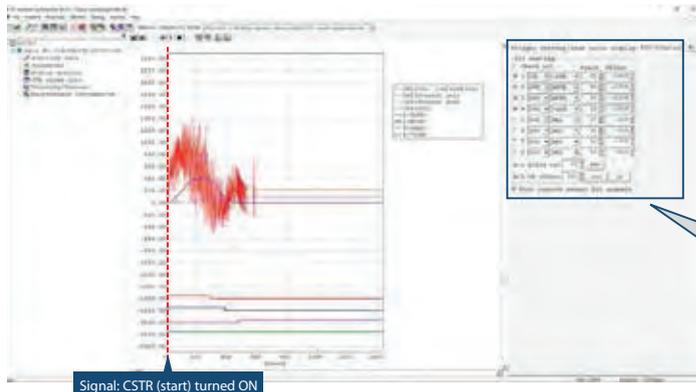

4 Enhanced Monitor Functions

The PC dedicated software can display information about the actuator and controller in operation as waveforms.

*Information that can be displayed: Command current value, current speed/position, and PIO signals (start, positioning completion, alarm, etc.)

Using the trigger function, the end user can specify a particular moment, either a change in PIO signals or a designated moment during the actuator's operation time, to begin displaying the waveforms.

Monitor function screen (example)

Signal: CSTR (start) turned ON

Display settings

Items to be monitored can be selected.

Trigger settings

* Data acquiring starts from time of change of selected items.

5 Low price

It is possible to achieve a low price by limiting it to the function that I often use.

Product model		PowerCon (High output driver)	High resolution battery-less absolute	Simple absolute	Calendar function	Maintenance function	I/O point	Positioning point	Field network

Model number

*The POB type has a maximum cable length of 2m.

System configuration

Features

1 Compatible with Battery-less Absolute Encoder *ACON-CB only

RCA equipped with a battery-less absolute encoder is supported. Since no battery is needed to retain position data, less space is required in the control panel, which in turn leads to lower both initial and maintenance costs of your equipment.

2 Compatible with Many Major Field Networks

Compatible with DeviceNet, CC-Link, CC-Link IE Field, PROFIBUS-DP, PROFINET IO, CompoNet, EtherCAT and EtherNet/IP. Field network connection allows for less-wiring, direct numerical commands, position number commands, current position reading, and more.

3 Maintenance Timings Can Be Checked Using the Traveled Distance Calculation Function

The total distance traveled by the actuator is calculated and recorded in the controller. If the preset distance is exceeded, a signal is output from the controller. This function can be used to check when to add grease or perform the next periodic inspection.

A signal is automatically output to the PLC when the preset maintenance/inspection timing (number of operations or distance traveled) is reached.

4 The Calendar Function Can Retain Alarm Timestamps

The built-in calendar function (clock function) records alarms and other events with timestamps, which helps analyze the causes of troubles should they occur.

5 Equipped with the Offboard Tuning Function *ACON-CB only

Supports Off-board tuning function, allowing optical setting of the gain based on the transport load.

<DCON-CB/CGB>

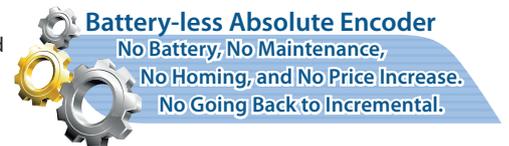

Features

1 For products with battery-less absolute encoder (ACON only)

Battery maintenance is not required, since it does not need a battery. Home return is not required during the initial setting, after emergency stop output, or when the device is restarted after failure.

Down time can be shortened, and manufacturing costs can be reduced.

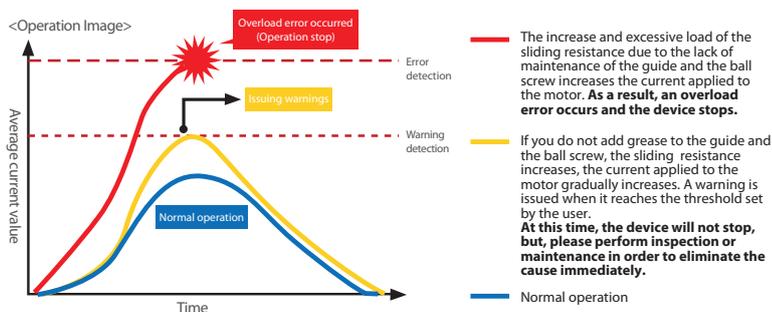

2 Equipped with Smart tuning function (ACON only)

Supports the smart tuning function, allowing optimal setting of the speed and acceleration/deceleration values based on the payload.

3 Preventative maintenance

Warning is issued before an overload error is generated from a change in the average current value.

- By using predictive maintenance function, it enables you to prevent urgent stops in your system.
- It effectively reduces labor costs because maintenance personnel can be minimized to the minimum required amount.

4 Low price

It is possible to achieve a low price by limiting it to the function that I often use.

SCON-CB

Position Controller for Single-axis robot / Cartesian robot /
RoboCylinder RCS2/RCS3/RCS4

(*) 3000 and 3300W types are not compliant with UL standard.

Features

1 Compatible with Battery-less Absolute Encoder

The RCS2, RCS3, RCS4, ISB and ISDB equipped with a battery-less absolute encoder are supported. Since no battery is needed to retain position data, less space is required in the control panel, which contributes to saving initial cost and maintenance cost.

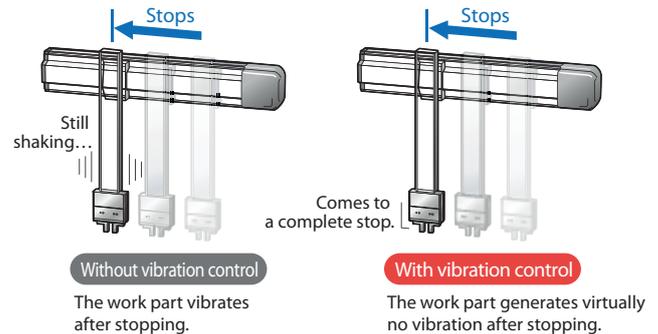

2 Supporting Major Field Networks <Optional Function>

In addition to DeviceNet, CC-Link, CC-Link IE Field and PROFIBUS-DP, direct connections are now possible to CompoNet, EtherCAT, EtherCAT Motion, EtherNet/IP and PROFINET IO. The actuator can also be operated by specifying coordinate values directly via a field network.

3 Vibration Control Function <Optional Function>

A vibration control function is equipped that suppresses vibration of the work part installed on the slider when the actuator's slider moves. This function shortens the time the actuator waits for vibration to settle, and consequently shortens the cycle time.

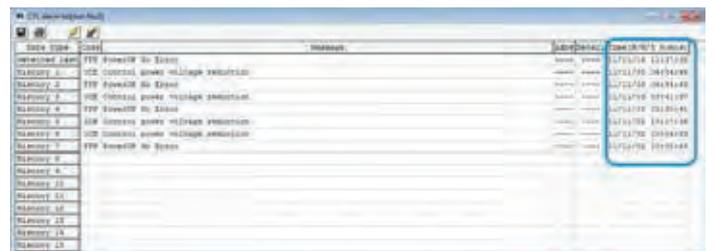

4 Capable of Predictive Maintenance <Optional Function>

- Equipped with a feature to detect motor overload and issue warning.
By monitoring the motor temperature, abnormal changes can be detected before a malfunction or failure occurs.
- Fully equipped with a monitoring function.
Like an oscilloscope, waveforms of position and speed can be acquired from the moment that the condition of a selected signal is changed. Signal status of positioning complete, alarm and so on can also be acquired.
- With smart tuning and o-board tuning, it is possible to adjust the acceleration/deceleration and gain depending on the payload.
- Using the counter function, the exact number of actuator movements and total distance traveled are calculated.
This function can be used to output a signal when maintenance is required.
- The calendar function enables to retain the history of alarm occurrence.

<Maintenance information>

<Calendar function>

5 Supports the Safety Function STO/SS1-t <Optional function>

Supports the STO (Safe Torque Off) / SS1-t (Safe Stop 1 - time controlled) function.

The STO / SS1-t function is to shut off the energy supply to the motor by electric circuit in the controller.

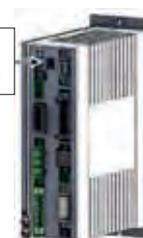

For the SCON-CB, two specification are available; STO and SS1-t specification. For applications of the vertical axis, SS1-t specification that has a long reaction time can prevent workpiece from dropping due to the time lag of brake operation when the safety torque shut off function is activated.

Specification	Description	Remarks
STO	Reacting to input signals, the energy supply to the motor is shut off after a reaction time (8ms or shorter) by shut-off circuit in the controller.	
SS1-t	Reacting to input signals, brake is applied and the energy supply to the motor is shut off after a reaction time (500ms or shorter) by shut-off circuit in the controller.	This braking operation is not included in the safety function.

The energy supply to the servo motor can be shut off safely by connecting an external safety-related device and the I/O connector for safety function.

I/O connector for safety function (for STO/SS1-t specification only)

In addition, the STO/SS1-t function is compliant with the following safety standards:

- ISO/EN ISO 13849-1 category 3 PL_e
- IEC 61508 SIL3
- IEC/EN61800-5-2
- IEC/EN62061 SIL CL3

(Note) An engineer with expert knowledge in relevant safety standards should read and understand the descriptions stated in the instruction manual before designing a safety system using this function.

■ Pulse Converter: Model number AK-04

Open-collector command pulses are converted to differential command pulses. Use this converter if the host controller outputs open-collector pulses.

■ Specification

Item	Specification
Input power supply	24VDC±10% (Max.50mA)
Input pulse	Open-collector (Collector current: 12mA max.)
Input frequency	200kHz or less
Output pulse	Differential output (10mA max.) (26C31 or equivalent)
Mass	10g or less (excluding cable connectors)
Accessories	3M's 37104-3122-000FL (e-CON connector), 2 pieces Suitable wire: AWG No.24~26

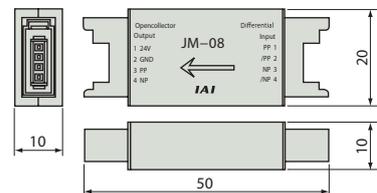

■ Pulse Converter: Model number JM-08

Converts differential pulses to the open-collector specification. Please use this converter if the host controller uses open-controller specification for pulse input.

■ Specification

Item	Specification
Input power supply	24VDC±10% (Max.50mA)
Input pulse	Differential input (10mA max.) (conforming to RS422)
Input frequency	500kHz or less
Output pulse	24-VDC open-collector (Collector current: 25mA max.)
Mass	10g or less (excluding cable connectors)
Accessories	37104-3122-000FL (e-CON connector)(by 3M) × 2 Suitable wire: AWG No.24~26

(*) 3000 and 3300W types are not compliant with UL standard.

Features

1 Equipped Dedicated Press Program

There are 9 types of press-operation modes to choose from

Speed control After arriving at the target position, stops while maintaining the position at the time of arrival.	Position stop
	Distance stop
	Load stop
	Incremental load stop
Force control After arriving at the target position, stops while maintaining the force at the time of arrival.	Position stop/Position stop2
	Distance stop
	Load stop
	Incremental load stop

Simple program input

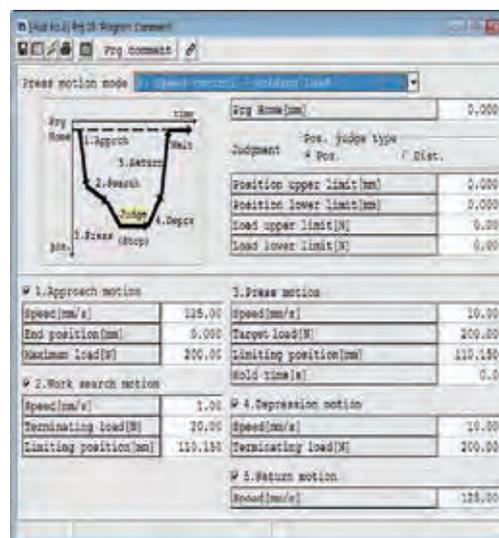

Simply operate the program by inputting the values into the screen for each press-operation mode that you are using.

Also, because the input increment for position is 0.001mm, it is now possible to input more precise settings.

This allows the user to make more microscopic adjustments in the positioning process.

A judgment function has also been added

Setting the judgment range with the press program judges whether or not the position and load fall within the specified range

2 Assignment of I/O Signals Specialized for the Servo Press Functions

The assignment of servo press dedicated I/O signals is completely different than the former PIO pattern.

3 Predictive Maintenance Functions

- A function that issues a warning when a motor overload is detected has been included
Monitoring changes in the temperature of the motor makes it possible to detect abnormalities before the occurrence of a breakdown or a malfunction.
- Improvement of monitoring functions
Similar to the trigger function of an oscilloscope, it is now possible to acquire the waveforms of the current position, current speed, etc. from the instant the state of the selected signal changes. Also, it is possible to acquire the signal states of positioning completion, alarms, etc.
- A function that integrates the number of cycles with the distance covered makes it possible to check maintenance timing.
- The calendar function makes it possible to keep a timetable of the alarms that have been generated.

4 Supports the Safety Function STO/SS1-t <Optional function>

Supports the STO (Safe Torque Off) / SS1-t (Safe Stop 1 - time controlled) function. The STO / SS1-t function is to shut off the energy supply to the motor by electric circuit in the controller.

For the SCON-CB, two specification are available; STO and SS1-t specification.

For applications of the vertical axis, SS1-t specification that has a long reaction time can prevent workpiece from dropping due to the time lag of brake operation when the safety torque shut off function is activated.

Specifications	Description	Remarks
STO	Reacting to input signals, the energy supply to the motor is shut off after a reaction time (8ms or shorter) by shut-off circuit in the controller.	
SS1-t	Reacting to input signals, brake is applied and the energy supply to the motor is shut off after a reaction time (500ms or shorter) by shut-off circuit in the controller.	This braking operation is not included in the safety function.

The energy supply to the servo motor can be shut off safely by connecting an external safety-related device and the I/O connector for safety function.

I/O connector for safety function (for STO/SS1-t specification only)

In addition, the STO/SS1-t function is compliant with the following safety standards:

- ISO/EN ISO 13849-1 category 3 Pl e
- IEC 61508 SIL3
- IEC/EN61800-5-2
- IEC/EN62061 SIL CL3

(Note) An engineer with expert knowledge in relevant safety standards should read and understand the descriptions stated in the instruction manual before designing a safety system using this function. Beware of potential injuries and failures.

5	5m

* When a field network specification is selected, the I/O cable length is "0".

Note

In principle, the same type of motor as the type of motor of the actuator to be connected should be entered, but there are some models where the motor type of some controllers and actuators do not match. Be sure to check the corresponding models listed below during selection.

<30D · 750S Applicable actuator>

- Controller Motor type "30D" RCS3-RA4R
- Controller Motor type "750S" RCS2 - RA13 R When option LCT is selected

Options

Absolute Data Backup Battery

Features This is an absolute data backup battery for an actuator with absolute specification.

Model **AB-5 (Battery only)**
AB-5-CS (With a case)
AB-5-CS3 (With a case)
 * For 3000W·3300W

Dummy plug (Safety category specification)

Features This plug is required when the safety category specification (SCON-CGB) is used.

Model **DP-5**

Dummy plug (STO/SS1-t specification)

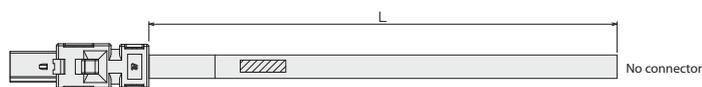

Features Necessary when STO/SS1-t function is not used.

Model **DP-6**

Spare Parts

Model CB-SC-STO 030

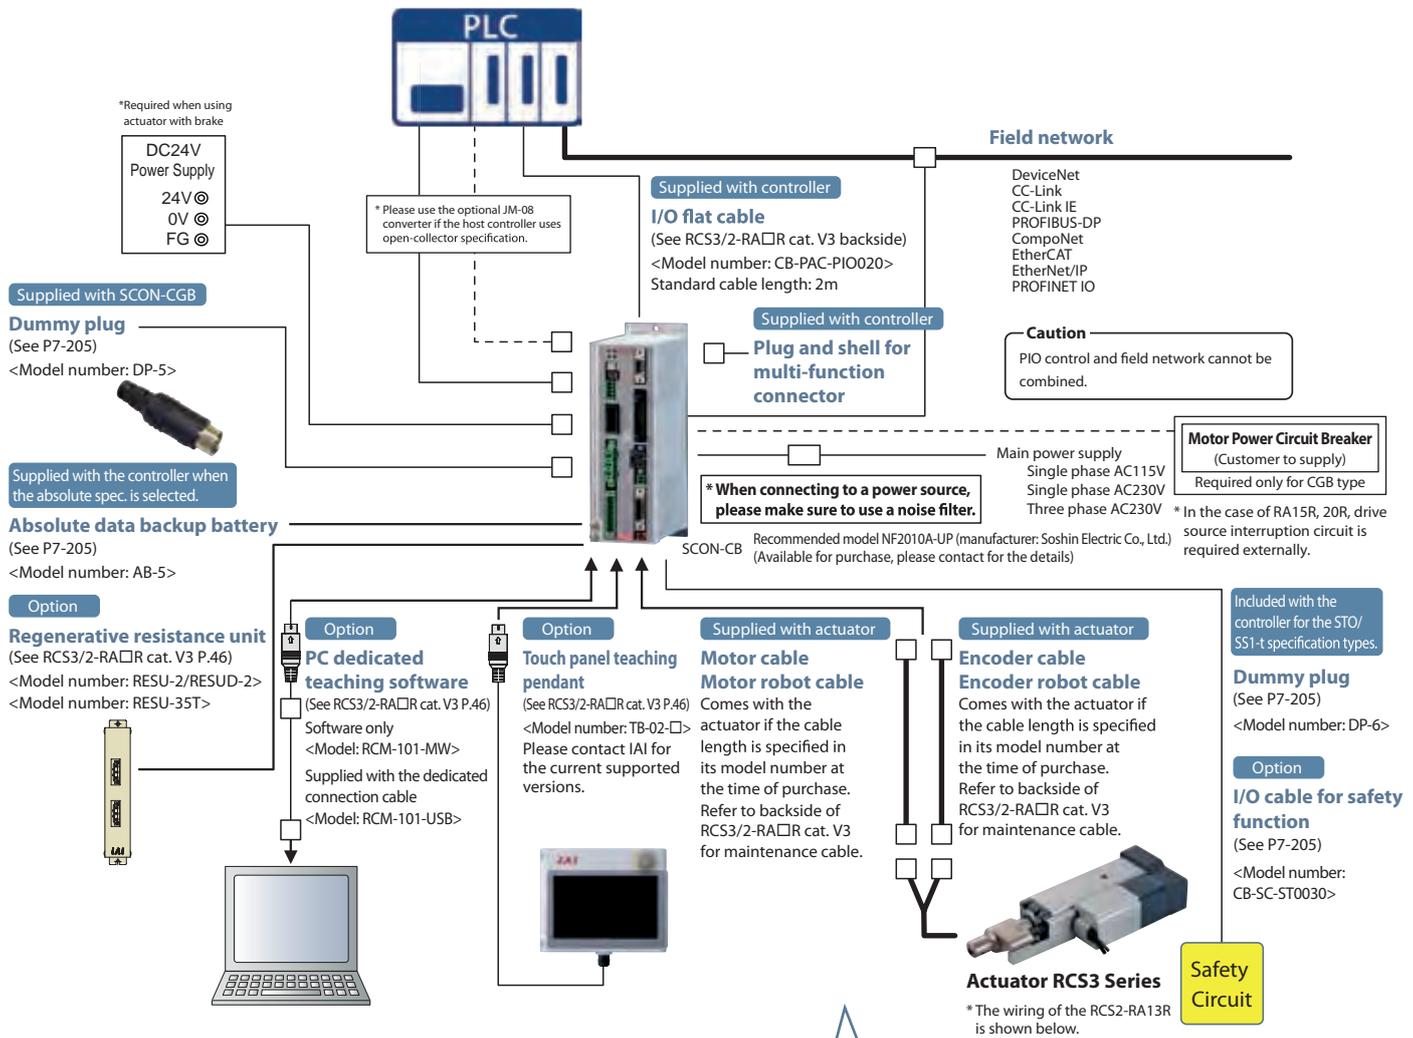

Wiring	Color	Signal	No.
—	—	—	1

Green/White	EDM+	8	8

Shield is connected to the cable clamp.

* Wire color: (ex.) Black/white represents white lines on the black insulator.

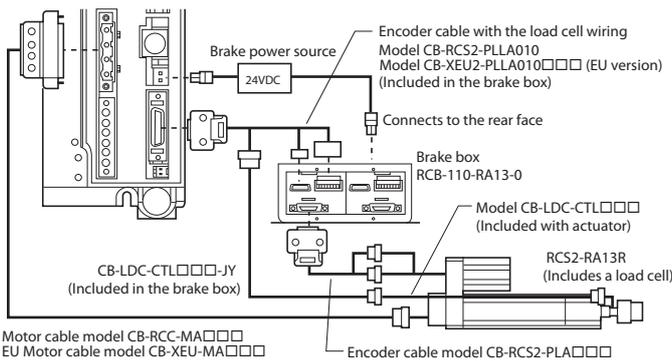

System Configuration

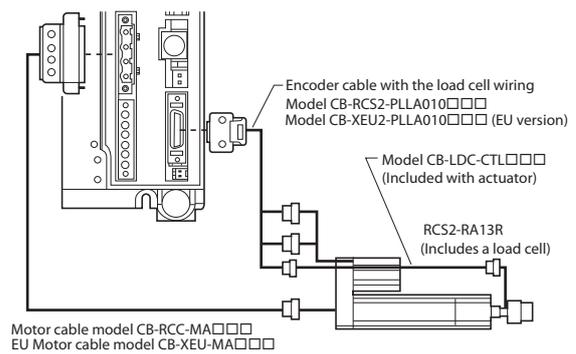

RCS2-RA13R wiring

RCS2-RA13R option: If the brake "BN" (No brake box) is selected and used as the second axis of the brake box, "CB-LDC-CTL□□□-JY", CB-RCS2-PLA010 should be purchased separately.

With a Brake

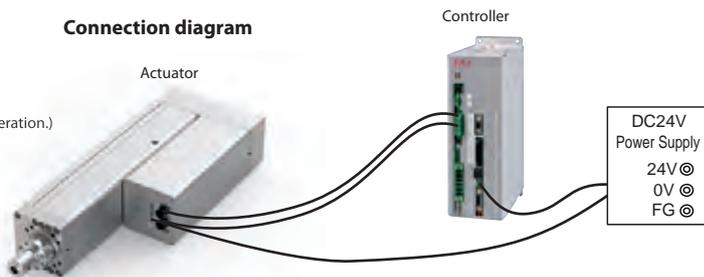

Without a Brake

RCS3-RA15R/20R (with brake) wiring

The brake circuit of RCS3-RA15R/20R is built into the actuator.
 Enter a 24VDC ± 10% voltage on the actuator.
 (If the input voltage is low, the brake cannot be released.)
 Please supply power with the voltage drop of the wiring in consideration.)
 24VDC supply is required for both actuators and controllers.

Connection diagram

The cable is to be prepared by the user. The connector is included.
 * For details, please refer to the instruction manual.

SCON-CAL

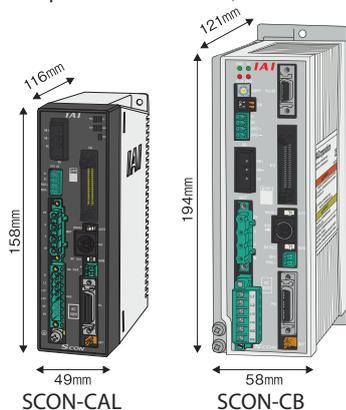

Position Controller for Single-axis Robot/Cartesian Robot/RoboCylinder
RCS2/RCS3/RCS4

1 Miniaturization realized

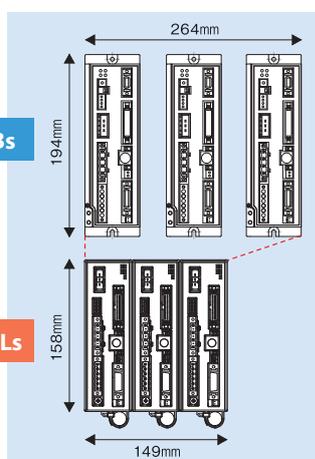

Compared with SCON-CB, the volume ratio has been reduced to 34%. It contributes to the space saving of the control panel.

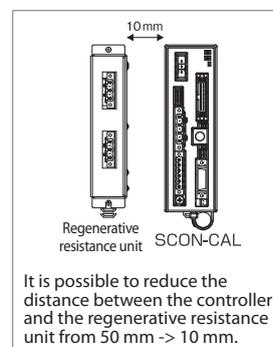

Smaller in volume 34%

Installing 3 SCON-CBs

Installing 3 SCON-CALs

Installation space: Approx. 53% less
Installation width: Approx. 43% less

It is possible to reduce the distance between the controller and the regenerative resistance unit from 50 mm -> 10 mm.

2 Improve maintenance

- When the absolute battery voltage or fan speed drops, the "WRG (warning)" LED turns on to alert the situation. With this function, you are informed visually when to replace each maintenance part. (The controller can also be set up to output a warning signal.)
- The total number of actuator movements and the total distance travelled are calculated and recorded in the controller, and when the predetermined count or distance is exceeded, a signal is output to an external device. You can use this function to check when the actuator needs re-greasing or periodic inspection. Past alarms are displayed to facilitate the analysis of the alarms because the time and date of each alarm that has occurred is now shown on the alarm history screen.

WRG

3 Function comparison with SCON-CB

	SCON-CB	SCON-CAL
① Supported encoders	Incremental Battery-less absolute encoder Absolute ABZ (UVW) parallel encoder	Incremental Battery-less absolute encoder Absolute
② Pulse train control	○	-
③ Servo monitor function	○	-
④ Offboard tuning	○	△ Unable to analyze with servo monitor
⑤ Vibration control function	○	△ Unable to analyze with servo monitor

(Note) Depending on the actuator, some models can not be connected to SCON - CAL. Please refer to P7-219 for details.

<<Explanation of Functions>>

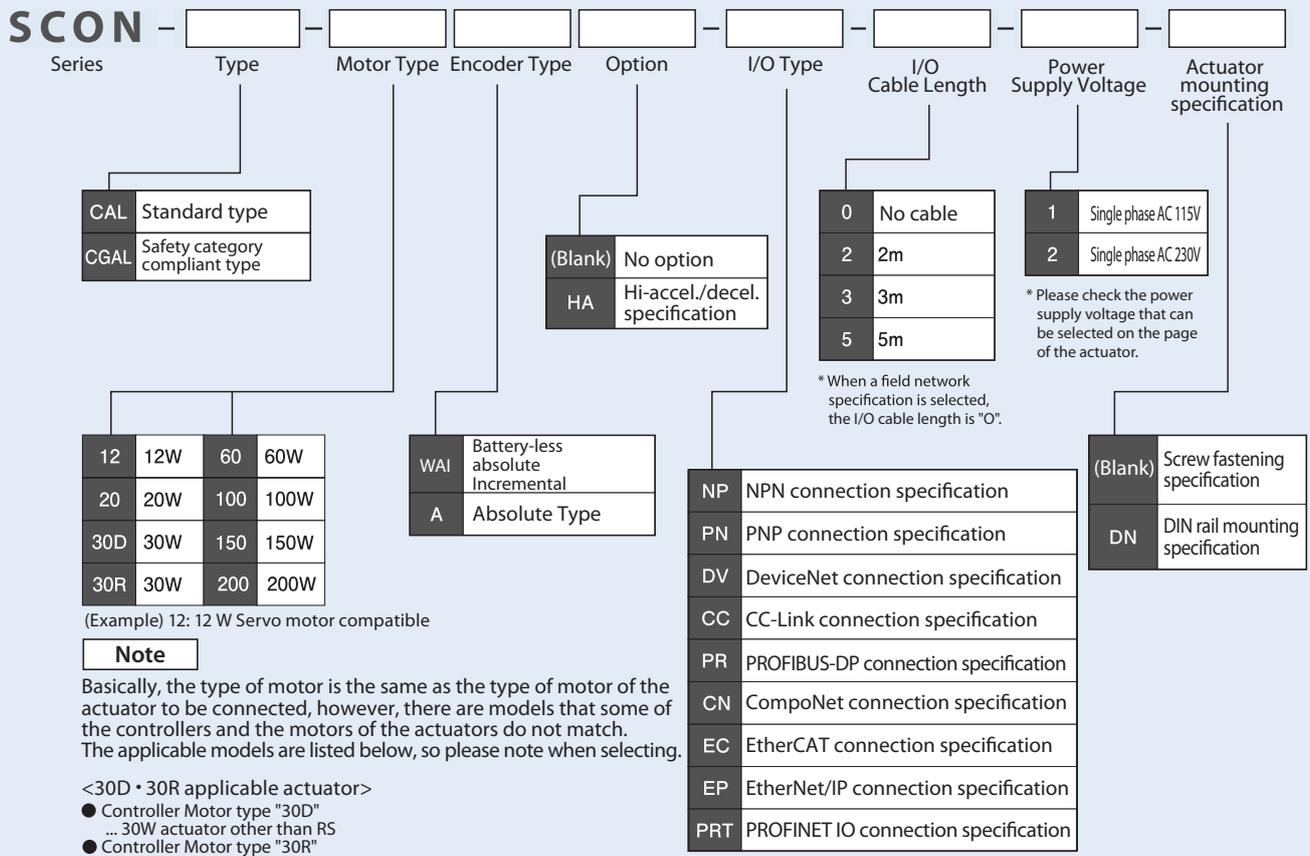

- ③ Servo monitor function: You can check the current speed, position, etc.
- ④ Offboard tuning: An optimal servo gain is calculated according to the load.
- ⑤ Vibration control function: When the actuator slider moves, oscillation (vibration) of the work installed on the slider is suppressed.

List of Models

Model

System configuration

(Note) The actuators which cannot be connected to SCON-CAL

- Actuators which motor wattage is greater than 200 W
 - DD(A) Series
- Incremental types of the following models:
- NS-S types: • RCS2-SRA7BD, SRGD7BD, SRGS7BD
 - Mini RoboCylinder: RCS2-RN5N, RP5N, GS5N, GD5N, SD5N, TCA5N, TWA5N, TFA5N

MSCON

**Position Controller for Single-axis Robot /
Cartesian Robot / RoboCylinder RCS2/RCS3/RCS4
SCON Series, 6-axis Type**

Features

1 Space-saving, low-cost, and easy to use

Six controllers (SCON-CB) are combined into one unit to save the installation space and achieve significant reduction in total cost.

2 Movement by numerical specification via Field network

Substantially shorter transmission time

MSCON controllers can be connected directly to key field networks such as DeviceNet, CC-Link, PROFIBUS-DP, PROFINET IO, CompoNet, EtherCAT and EtherNet/IP.

Features of Network Specification

- 256 positioning points per axis
- Moving the actuator after numerically specifying the position to move to, and the speed
- Checking the current position in real time
- Significantly shorter communication time within the controller (approx. one-sixth compared to conventional controllers)

DeviceNet™

CompoNet™

EtherNet/IP™

3 Offboard tuning function to enhance actuator payload capacity

The offboard tuning function increases the acceleration/deceleration speed when the load is small, and decreases the acceleration/deceleration when the load is large, to ensure optimal operation settings according to the load. In addition, this function also adjusts the servo characteristics.

4 Vibration control function for shorter cycle time

The vibration control function has been added to prevent the work from shaking (vibrating) on the actuator slider as the slider moves. The wait time for vibration to stabilize is shorter and the cycle time can also be shortened.

NP	PIO NPN (standard)
PN	PIO PNP
DV	DeviceNet
CC	CC-Link
PR	PROFIBUS-DP
EP	EtherNet/IP

System Configuration

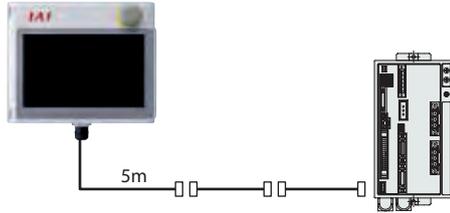

Options

Touch Panel Teaching Pendant

Features This is a teaching device that provides information on functions such as position input, test runs, and monitoring.

Model TB-02-□

Configuration

Specifications

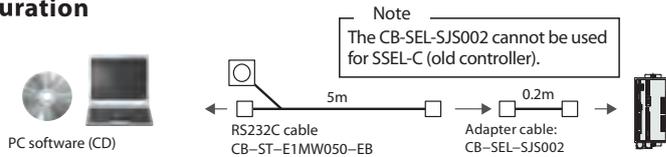

Rated voltage	24V DC
Power consumption	3.6W or smaller (150mA or smaller)
Ambient operational temperature	0 to 40°C
Ambient operational humidity	20 to 85% RH (non-condensing)
Protection class	IP20
Weight	470g (TB-02 only)

PC dedicated teaching software (Windows only)

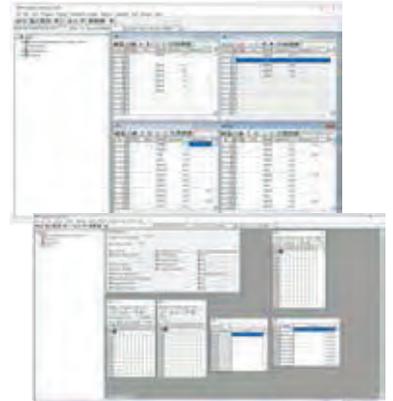

Features A startup support software for entering programs/positions, performing test runs, and monitoring. More functions have been added for debugging, and improvements have been made to shorten the start-up time.

Model IA-101-X-MW-JS (with RS232C cable + adapter cable)

Configuration

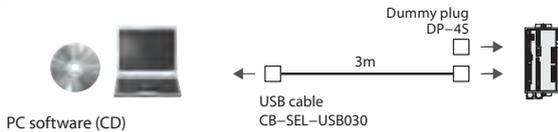

Compatible with Windows ver.: 7/8/8.1/10

Model IA-101-X-USBS (with USB cable)

Configuration

Note
Dummy plug DP-4S cannot be used for SSEL-C (old controller).

Note
Only versions 7.0.0.0 and later can be used with the SSEL controller.

Regenerative Resistor Unit

Features A unit that converts the regenerative current, generated during the acceleration/ deceleration of the motor, into heat. In the table on the right, check the total power output of the actuator to see if a regenerative resistor is needed.

Model RESU-2 (standard)
RESUD-2 (DIN rail mount)

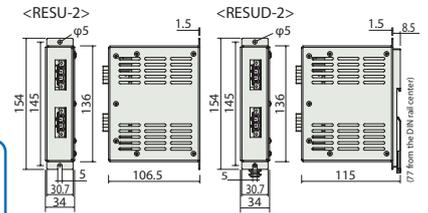

Specifications	Model	RESU-2	RESUD-2
Weight of main unit		approx 0.4kg	
Internal regenerative resistance		235Ω 80W	
Installation		Screw mounting	DIN rail mounting
Connection cable		CB-SC-REU010	

Required number of units **External dimensions**

	Horizontal	Vertical
0	~200W	~200W
1	~800W	~600W
2	~800W	~800W

* Depending on the operating conditions, more regenerative resistors may be needed.

* When two regenerative units are required, please use one RESU-2 and one RESU-1. (See Page 7-287)

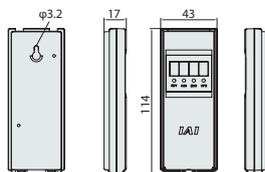

CAD drawings can be downloaded from our website. www.iai-automation.com 2D CAD 3D CAD

Panel Unit

Features Display device that shows the error code from the controller or the currently running program number.

Model PU-1 (cable length: 3m)

Absolute Data Backup Battery

Features Battery for saving absolute data, when operating an actuator with an absolute encoder. Same as the battery used for system memory backup.

Model AB-5

System Memory Backup Battery

Features This battery is required when you are using global flags in the program and you want to retain your data even after the power has been turned OFF.

Model AB-5-CS (with case)
AB-5 (stand-alone battery)

Options

Dummy Plug

Features When connecting the SSEL controller to a computer with a USB cable, this plug needs to be connected to the touch panel teaching port connector to shut off the enable circuit.
(PC dedicated teaching software IA-101-X-USB includes this plug.)

Model DP-4S

* Cannot be used for SSEL-C.

USB Cable

Features A cable for connecting the controller to the USB port to a computer.
A controller with no USB port (e.g. XSEL) can be connected to the USB port of a computer by connecting an RS232C cable to the USB cable via a USB adapter. (See PC software IA-101-X-USBMW) Refer to the PC dedicated teaching software IA-101-X-USBMW.

Model CB-SEL-USB030 (cable length: 3m)

Adapter Cable

Features This conversion cable is used to connect the D-sub, 25 pin connector of the touch panel teaching pendant or PC dedicated teaching software to the teaching connector (half pitch) of the SSEL controller.

Model CB-SEL-SJS002 (cable length: 0.2m)

* Cannot be used for SSEL-C.

Spare Parts

When you need spare parts after purchasing the product, such as when replacing a cable, refer to the list of models below.

MSEL

Program Controller
for RCP6/RCP5/RCP4/RCP3/RCP2/IXP
Wrist Unit WU

Features

1 Control Maximum of 4 Axes Available with Pulse Motor Mounted RoboCylinder

Actuators with pulse motor in the past were able to control only up to two axes with one program controller. By using MSEL, four axes will be available for control. It is also available for interpolation operations, which enhances the ways of use.

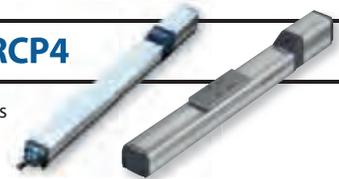

Examples of Combinations

3-axis Cartesian (Pulse Motor)	RCP6	IXP (3-axis specification)	RCP2
	+		+
			+

Available to Connect up to 4 Axes

2 Available to Connect RoboCylinders RCP6, RCP5 and RCP4

By applying to PowerCon, it is now possible to perform interpolation operations with RoboCylinders RCP6, RCP5 and RCP4, which are applicable for high-output driver, but were not feasible with the program controller PSEL in the past.

3 Cable Reduction and Space-saving

In the past, to control actuators of 4 axes, two 2-axis controllers (PSEL) and a 24V power supply were needed. Due to the built-in power source, one MSEL controller can control 4 axes.

In case of controlling 4 axes of actuators

<p>Conventional product 2 PSEL units + 24V power supply</p>	<div style="background-color: red; color: white; padding: 10px; font-weight: bold; font-size: 1.2em;"> Cable Reduction Applicable for AC100 to 230V built-in power source. </div> <div style="background-color: red; color: white; padding: 10px; font-weight: bold; font-size: 1.2em;"> Cost Reduction Approx. 36% reduced </div>	<p>New 1 MSEL unit</p>
--	---	---

4 Equipped with Expansion I/O Slot

In addition to the standard I/O (IN 16 points / OUT 16 points), one slot is available as an expansion I/O slot. The expansion I/O is available to select from PIO (IN 16 points / OUT 16 points) or various field networks.

Table of Models

Program controller for operations of RCP6/RCP5/RCP4/RCP3/RCP2 Series actuators. It is applicable to various types of controls with one unit.

Type		PC	PG
Name		Standard type	Safety category compliant type
External view			
Maximum controllable axes		4	
Number of positions		30000 points	
Power supply		Single-phase AC100~230V	
Safety category		B	3*1
Battery-less absolute Incremental	1-axis		○
	2-axis		○
	3-axis		○
	4-axis		○
Simple absolute specification	1-axis		○
	2-axis		○
	3-axis		○
	4-axis		○

*1: Compliance with the Safety Category requires the customer to install a safety circuit externally to the controller.

System Configuration

Options

Touch Panel Teaching Pendant

Features A teaching device offering program/position inputs, trial operations and monitoring functions.

Model number TB-02-□

Specifications

Rated voltage	24V DC
Power consumption	3.6W or smaller (150mA or smaller)
Ambient operating temperature	0~40°C
Ambient operating humidity	20~85%RH (No-condensing)
Protective structure	IP20
Weight	470g (TB-02 unit only)

Absolute Battery Box

Outline If the absolute position encoder specification is selected with code ABB, the absolute battery box is included with the controller. However, if the battery box is ordered as a separate unit, it does not include the battery. Purchase the battery separately if needed (model: AB-7).

Model MSEL-ABB (battery not included)

*The cable to connect the absolute battery box and MSEL (Model CB-MSEL-AB005) are supplied with the absolute battery box. Simple absolute type (Model: ABB) can be selected only for the MSEL-PC/PG/PCF/PGF.

Dummy Plug

Features This plug is required for the safety category compliant specification (MSEL-PG/PGX/PGF) and when the MSEL is operated using a USB cable. (Supplied with MSEL-PG/PGF type and PC dedicated teaching software IA-101-X-USBS.)

Model number DP-4S

Adapter Cable

Features Converts the D sub 25 pin connector of the touch panel teaching pendant or RS232C cable to MSEL teaching connector. (Comes with TB-01-SJ and IA-101-X-MW-JS.)

Model number CB-SEL-SJS002

Replacement Battery

Features The replacement battery for the absolute battery box.

Model AB-7

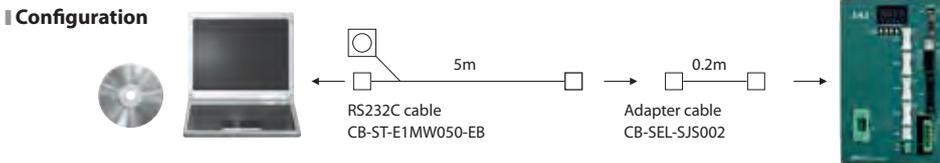

* Same quantity of absolute battery units is required as the number of axes.

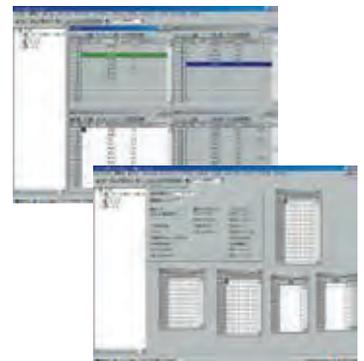

PC dedicated teaching software

Features The startup support software provides program/position input, test operation and monitoring functions, among others. With its enhanced functions required for debugging, this software helps shorten the startup time.

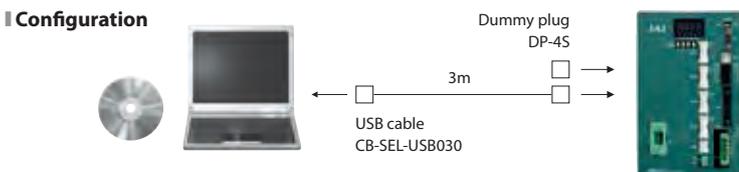

Model number IA-101-X-MW-JS (with RS232C cable + Connector adapter cable)

Compatible Windows: 7/8/8.1/10

Model number IA-101-X-USBS (with USB cable + dummy plug)

The MSEL-PC/PG are supported by ver. 12.00.01.00 or later.

The RS232 standard cable CB-ST-E1MW050-EB cannot be used when "Building an enable system that uses a system I/O connector and external power supply" or "Building a redundant safety circuit." (The RS232 safety category cable CB-ST-A2MW050-EB must be used instead.)

Spare Parts

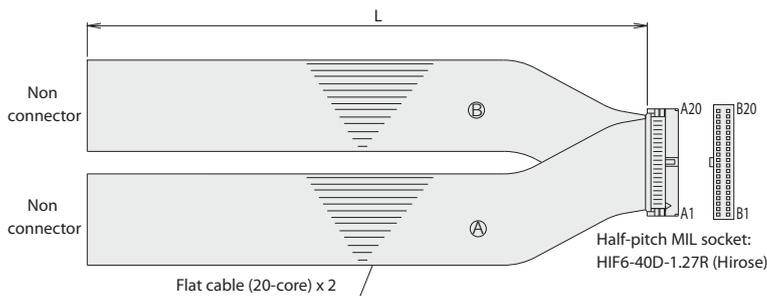

When you need spare parts after purchasing the product, such as when replacing a cable, refer to the list of models below.

3	3-phase AC230V

(Ex) 12: 12W servo motor compatible

Note

Basically, the motor has the same alphanumeric sign as the connecting actuator motor, though some controllers and actuator motors have different signs.

When ordering, pay attention to such types listed below:
(30D/30R compatible actuators)

- Controller motor type "30D"...30W actuator other than RS
- Controller motor type "30R"... RS

(*) Network dedicated slots 1 and 2 are for specific network boards. Specify the right symbol from available ones.
(*) Network dedicated slots and I/O slots can be used together.

* Note: When selecting a single-axis or Cartesian robots.

The total wattage for a single-axis and Cartesian robot that can be connected to XSEL-RA/SA type is 2400W for a 3-phase specification, and 1600W for a single-phase specification. The maximum wattage for one axis is 750W, but the total wattage of each axis should not exceed the specified wattage.

NOTE XSEL-RA/SA type cannot be connected to the following models:

- RCS2-SRA7/SRGS7/SRGD7
- RCS2-□□5N (Incremental)
- Servo press
- NS-SXM□/SZM□ (Incremental)
- RCS3-CT□

- Controller motor type "30R"... RS

NOTE

The 5th and 6th axes of the XSEL-P/Q cannot connect to the following models:

- RCS2-SRA7/SRGS7/SRGD7
- RCS2-□□5N (Incremental)
- NS-SXM□ /SZM□ (Incremental)
- Servo press

Regenerative Resistance Unit

Model

RESU-1 (Standard specification)
RESUD-1 (DIN rail mount specification)

Details

This unit converts to heat the regenerative current produced when the motor decelerates. Although the controller has a built-in regenerative resistor, its capacity may not be enough if the axis is positioned vertically and the load is large. In such a case, one or more regenerative units will be required. (Refer to the table at right)

Specifications

Item	RESU-1	RESUD-1
Main unit weight	Approx. 0.4 kg	
Built-in regenerative resistor	235Ω 80W	
Unit mounting method	Screw fixing	DIN rail mount
Accessory	CB-ST-REU010	

Installation standard

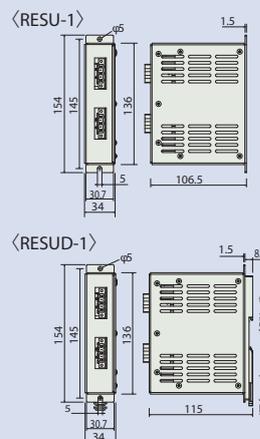

Determined by the total motor capacity of the connected axes.

Horizontal use

Number of connecting units	P/Q/RA/SA Type
0	~100W
1	~600W
2	~1200W
3	~1800W
4	~2400W

Vertical use

Number of connecting units	P/Q/RA/SA Type
0	~100W
1	~600W
2	~1000W
3	~1400W
4	~2000W
5	~2400W

Absolute Data Backup Battery (for XSEL-P/Q/RA/SA)

Model

AB-5

Features

Absolute data backup battery for operating actuators with absolute specification.

Expansion PIO Board

Details

An optional board for adding I/O (input/output) points. With the general-purpose and large-capacity types, up to 3 expansion PIO boards can be installed in the expansion slots. (With the compact types, only one expansion PIO board can be installed in the expansion slot, provided that the controller is of 3- or 4-axis specification.)

Field Network Connection Board

Model

DV/CC/PR/EP/EC (* specified within the controller model)

Details

When specifying a field network option at the controller I/O, a field network board is installed in the I/O slot.

<Table of applicable networks>

	DeviceNet	CC-Link	PROFIBUS-DP	EtherNet/IP	EtherCAT
XSEL-P/Q	●	●	●	● (Note 1)	—
XSEL-RA/SA	●	●	●	● (Note 1)	●

(Note) The number of input/output points is input 256 points / output 256 points per one board (only one board can be installed).

(Note 1) The EtherNet/IP specification can cope with the Ethernet (PCP/IP: message communications) by setting parameters.

Dummy Plug

Model

DP-2

Features

A dummy plug to be attached to the teaching connector when the touch panel teaching pendant is not connected.

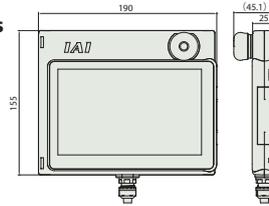

Options

Touch panel teaching pendant

Features A teaching device having functions of position inputs, trial operations, monitoring, etc.

Model **TB-02-□**

External dimensions

Specifications

Rated voltage	24V DC
Power consumption	3.6W or less (150mA or less)
Operating ambient temperature	0~40°C
Operating ambient humidity	20 to 85%RH (non-condensing)
Protective class	IP20
Weight	470g (TB-02 single unit only)

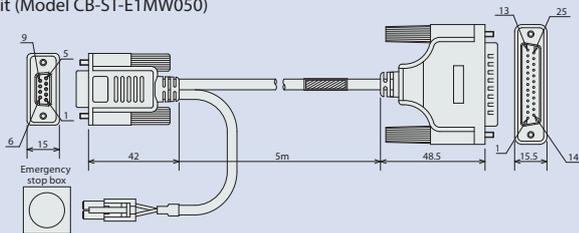

PC dedicated teaching software (Windows only)

Model **IA-101-X-MW**

Features Startup support software for inputting programs/positions, performing test runs and monitoring. More functions are added for debugging, enabling the start-up time to shorten.

Details Software (CD-ROM), compatible Windows: XP SP2 or later/Vista 7/8/10
PC connecting cable 5m + emergency stop box (Model CB-ST-E1MW050-EB)

PC connecting cable single unit (Model CB-ST-E1MW050)

Note

- * Versions older than 3.0.0 cannot be used for the XSEL-P type.
- * Versions older than 2.0.0 cannot be used for the SCARA type.
- * Use IA-101-XA-MW if you use a safety category 4 compliant controller.
- * Cannot be used for the XSEL-Q/QX/SA/SAX/SAXD types.
- * When you separately order a PC connecting cable for a maintenance purpose, beware that the cable single unit model is CB-ST-E1MW050, but when ordering it together with the emergency stop box, the model is CB-ST-E1MW050-EB.

Safety category 4 compliant PC dedicated software (for XSEL-Q/QX/SA/SAX)

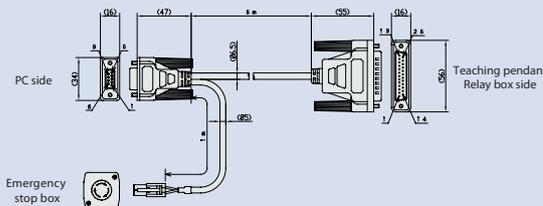

Model **IA-101-XA-MW**

* Exclusive use for XSEL-Q/QX/SA/SAX.
Cannot be used for other controllers.

Features A startup support software program offering program/position input function, test operation function, monitoring function, and more. The functions needed for debugging have been enhanced to help reduce the startup time. PC connecting cable is compatible to safety category 4 by duplicating the emergency stop circuits.

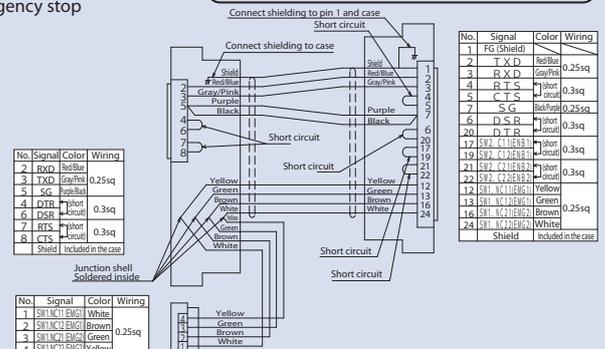

Details Software (CD-ROM)
Compatible Windows: 7/8/8.1/10
(Accessories) PC connecting cable 5m + emergency stop box (Model: CB-ST-A2MW050-EB)

Dimensions PC connecting cable (Model: CB-ST-A1MW050)

NOTE

When ordering a separate replacement PC cable the model number for the cable only is CB-ST-E1MW050, and for cable with the emergency stop box is CB-ST-E1MW050-EB. If a teaching tool is not used, connect the dummy plug DP-2 (supplied with the controller, to the teaching connector.

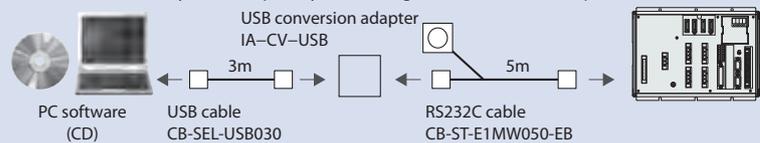

USB-compatible PC software

Model **IA-101-X-USBMW**

Features Software available by PC's USB port by connecting a USB conversion adapter to a RS232C cable.

Description Software (CD-ROM)
Compatible Windows: 7/8/8.1/10
PC connecting cable 5m + emergency stop box + USB conversion adapter + USB cable 3m

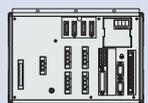

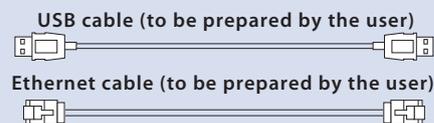

PC dedicated teaching software (for XSEL-RA/SA/RAX/SAX)

Model **IA-101-N**

Features Contains only the PC dedicated teaching software (CD-ROM). Order only the software when connecting both the controller and PC sides by USB cable or Ethernet cable. The cable that meets the following specifications is supplied by the customer.

Details Software (CD-ROM), compatible Windows: XP SP2 or later/Vista 7/8/10

	Controller side connector	Max. cable length
USB cable specification	USB Mini-B	5m
Ethernet cable specification	10/100/1000BASE-T (RJ-45)	5m

NOTE

When operating an actuator by USB connection, make sure to attach a stop switch to the system I/O connector. If an emergency switch cannot be prepared, use the "IA-101-X-USBMW" with an emergency stop.

X-SEL

SCARA Robot
Program Controller

List of Models

Multi-Axes program controller enabling SCARA robot operation. Allows simultaneous control of up to 8 axes.

* Note for selecting SCARA robots
 There are limitations as to which SCARA robots can be connected together.
 Please refer to "Non-connectable Actuators" on P7-294.

● For SCARA robot IX

Non-connectable actuators

For XSEL-PX/QX (5, 6 axes)

RCS2-□□5N (incremental specification), RCS2-SRA7BD/SRGS7BD/SPGD7BD,
NS-SXM□/SZM□ (both incremental specification only), DDA Series

For XSEL-RAX/SAX (5 to 8 axes)

RCS2-□□5N (incremental specification), RCS2-SRA7BD/SRGS7BD/ SRGD7BD,
NS-SXM□/SZM□ (both incremental specification only), RCS2-RA13R (with load cell), RCS3-RA□R

Limitations on additional axis connection

■ Limitations on additional axis actuator when connecting XSEL-RAX/SAX

For SCARA controllers, there is a limit to the total motor wattage of the additional axis actuator motors that can be connected besides SCARA robots. Make sure that it does not exceed the "total wattage and max. number of connectable axes" specified in the table below.

SCARA type		Total wattage and max. number of connectable axes
		3-phase specification
Ultra-compact type	NN*1205 / NN*1505 / NN*1805	1500W 4 axes (max. 750W/axis)
Small high-power type	NN*2515H / TNN3015H / UNN3015H NN*3515H / TNN3515H / UNN3515H	1500W 4 axes (max. 750W/axis)
Medium high-power type	NN*50□□H / HNN5020H / INN5020H NN*60□□H / HNN6020H / INN6020H	600W 4 axes (max. 600W/axis)
Large high-power type	NN*70□□H / HNN70□□H / INN70□□H NN*80□□H / HNN80□□H / INN80□□H	Cannot be connected
High-speed high-power type	NSN5016H / NSN6016H	Cannot be connected

■ Limitations on connectable SCARA robots when connecting XSEL-RAXD/SAXD

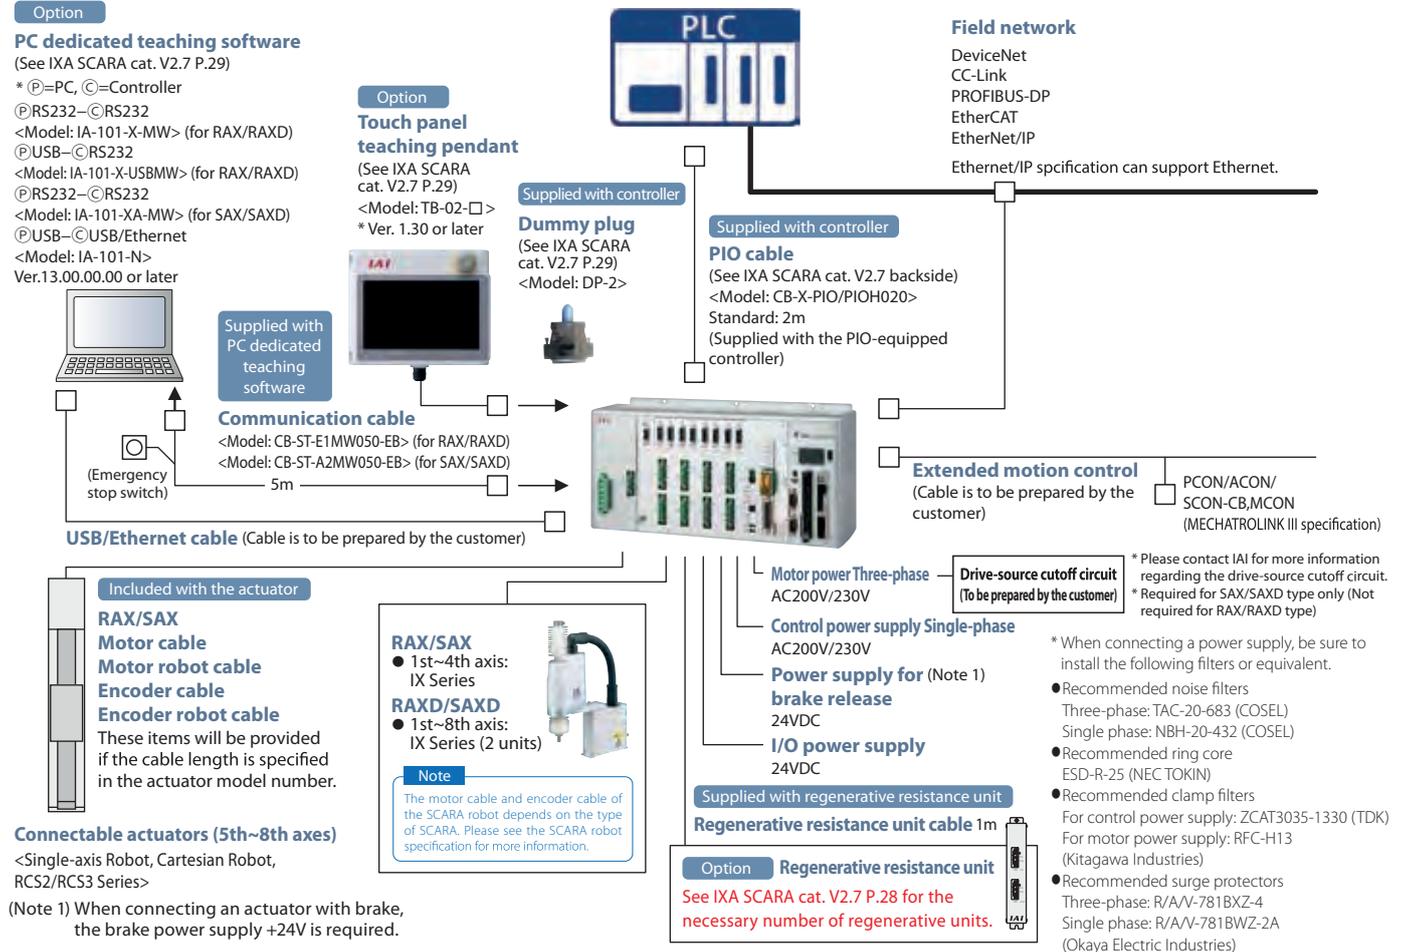

Controllers for SCARA can connect max. two SCARA robots, but there is a limitation for the combination. Please select a connectable combination.

SCARA robot model for 2 robot combinations			
1st robot		2nd robot	
Ultra-compact type	NN*1205 / NN*1505 / NN*1805	Ultra-compact type	Medium high-power type
Small high-power type	NN*2515H / NN*3515H TNN3015H / UNN3015H TNN3515H / UNN3515H		Small high-power type
Medium high-power type	NN*50□□H / NN*60□□H HNN5020H / INN5020H HNN6020H / INN6020H		
Large high-power type	NN*70□□H / NN*80□□H HNN70□□H / INN70□□H HNN80□□H / INN80□□H	Cannot be connected	
High-speed high-power type	NSN5016H / NSN6016H	Cannot be connected

System Configuration

■ XSEL-RAX/RAXD/SAX/SAXD Type

■ XSEL-PX/QX Type

TB-02

Universal for Position controller/Program controller
Touch Panel Teaching Pendant TB-02

Features

- By equipping a 7" full color touch screen, the buttons and letters became easier to see, and operability improved.
- When used with a program controller, it has the same functions as the previous model. When used with position controllers, new functions, such as the guide function, have been installed, and it is easy to set the model using the interactive method.
- It can be used for both position controllers and program controllers.
(Excludes models prior to RCP2 for the CON series and models prior to SEL-E/G)
- For the standard specification, a Thickness of 25mm has been achieved.
- Saving program/data into SD memory card.
- Screen shot function convenient for procedure manual creation and recording conditions has been equipped.

Various new functions for easy operation and enhanced support functions (2~13,18,19 are functions for position controllers)

1	Main Menu	A menu screen that is easy to select visually with the use of icons.
2	Position Editing Guide	A function that guides through position data setting method using an interactive method.
3	I/O Control Guide	A function that guides through the I/O operation method of the position controller using an interactive method.
4	Simple Program Setting	A function through which the operation method, position, and speed can be input using an interactive method.
5	Off-board Tuning	A function for calculating the settings of the optimal control parameter (each type of gain) and cycle time by inputting the operation conditions.
6	Trouble Shooting	A function that displays detailed alarm information when a problem occurs and the steps to deal with the trouble using an interactive method.
7	Maintenance Parts List	A function that display the time for regular maintenance and the maintenance parts list for parts exchange at the time malfunction.
8	Startup Screen Setting	A function for selecting the startup screen and hiding the guide function icon of the main menu.
9	Pulse-train Control Setting	A function that makes input easy by putting together the setting for the pulse-train control related parameters on a special screen.
10	Glossary of Terms	A function that displays the explanation of terms from the catalog and terms related to position controller operation.
11	Gateway Setting/Monitoring	A function for setting and monitoring the gateway unit in a gateway system for MCON/MSEP-C/RCP6S.
12	Simple Program	Function A function for performing easy program operations such as repeating position and setting stopping time.
13	Servo Monitoring	A monitoring function to check the actual operation condition with displays of waveforms.
14	Teaching Update	A function that lets you update software
15	Screen shot	A function for saving a bmp file of the screen shot into SD card by pressing and holding the bottom right section of the screen.
16	Large Monitor	By equipping a 7" full color touch panel, the buttons and letters became easier to see, and operability improved.
17	Multi-language Compatible	Compatible with English, Japanese, and Chinese.
18	Network data	Display I/O data between host PLC and controller when connecting single-axis of network specification
19	Press program function	Edit and conduct a test run for press program when connecting controller for servo press.

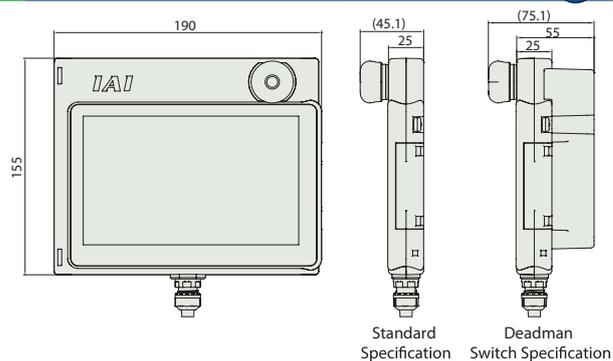

TB-02

Specifications

Rated voltage	24VDC
Power consumption	3.6W or less (150mA or less)
Ambient operating temp.	0 ~ 40°C
Ambient operating humidity	20 ~ 80%RH (Non-condensing)
Environmental resistance	IP20
Overseas standard	CE
Mass	470g (TB-02 box only) + 330g (5m cable)
	600g (TB-02D box only) + 330g (5m cable)
Cable length	5m (Standard cable is attached to the box)

External Dimensions

CAD drawings can be downloaded from our website.
www.iai-automation.com

Models

The teaching pendant is compatible with every controller on P. 7-318, but please select the cable according to the controller.

* The recommended color of the emergency stop switch is gray when the controller is a standard specification, and is red (model: -SWR) when the controller is a safety category compliant specification.

Teaching Pendant + Cable as a Set

Type	Model Number	Specification	Included Cable	
			For Position Controller	For Program Controller
Models universal for position and program controllers	TB-02-SC	Standard specification (Gray stop switch)	①CB-TB1-C002	②CB-TB1-X002 + ③CB-SEL-SJS002
	TB-02-SC-SWR	Standard specification (Red stop switch)		
	TB-02D-SC	Deadman switch specification (Gray stop switch)		
	TB-02D-SC-SWR	Deadman switch specification (Red stop switch)		
Models dedicated to position controllers	TB-02-C	Standard specification (Gray stop switch)	①CB-TB1-C002	
	TB-02-C-SWR	Standard specification (Red stop switch)		
	TB-02D-C	Deadman switch specification (Gray stop switch)		
	TB-02D-C-SWR	Deadman switch specification (Red stop switch)		
Models dedicated to program controllers	TB-02-S	Standard specification (Gray stop switch)	②CB-TB1-X002 + ③CB-SEL-SJS002	
	TB-02-S-SWR	Standard specification (Red stop switch)		
	TB-02D-S	Deadman switch specification (Gray stop switch)		
	TB-02D-S-SWR	Deadman switch specification (Red stop switch)		

* You can specify the following at the end of the model number. Written in English when shipped: -ENG.

Teaching Pendant Only (No Cable Included)

Type	Model Number	Specification
Models universal for position and program controllers	TB-02-SCN	Standard specification (Gray stop switch)
	TB-02-SCN-SWR	Standard specification (Red stop switch)
	TB-02D-SCN	Deadman switch specification (Gray stop switch)
	TB-02D-SCN-SWR	Deadman switch specification (Red stop switch)

Individual Cable Only

Type	Model Number
Position controller connection cable	①CB-TB1-C002
Program controller connection cable	②CB-TB1-X002
	③CB-SEL-SJS002 (Adapter cable)*
TP adapter connection cable	④CB-TB1-GC002

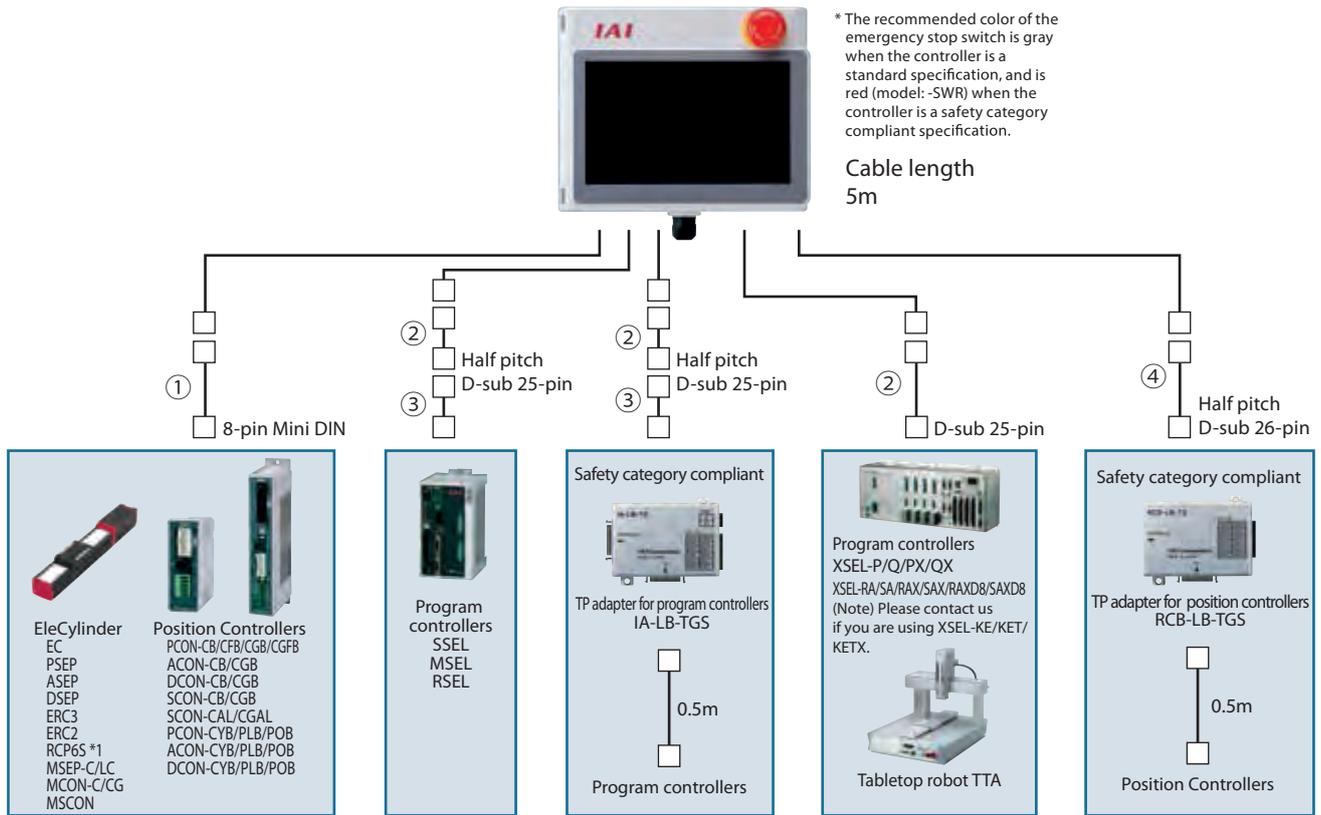

* Use with CB-TB1-X002 when connecting to ASEL, PSEL, SSEL, and MSEL.

Options

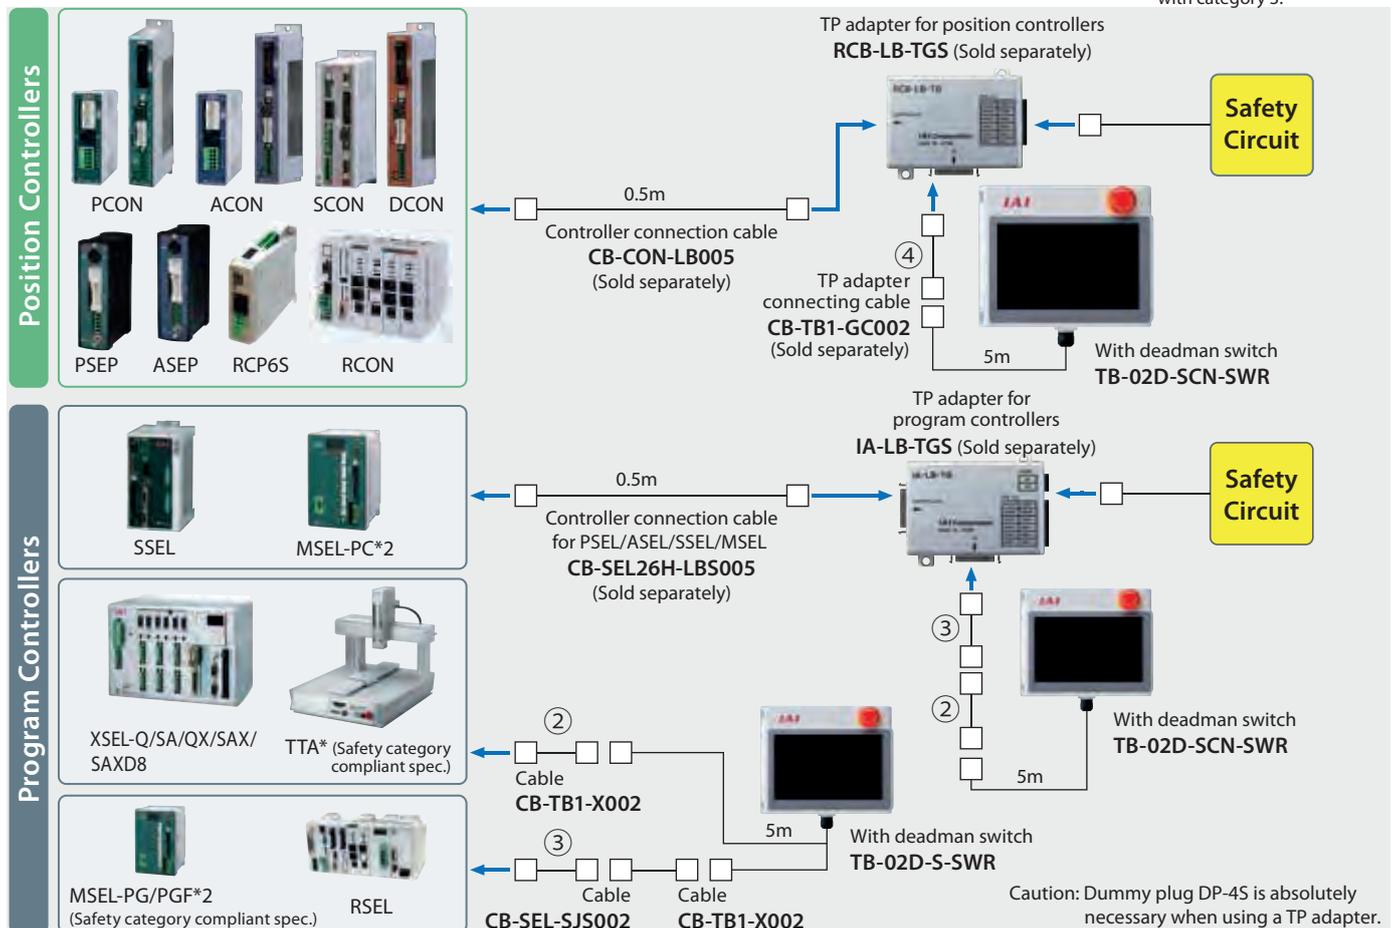

Name	Model Number	Description
Strap	STR-1	Connected to the box.
Grip belt	GRP-1	Safety belt to hold the box by left hand.
Spiral cord	SIC-1	A cord which connects the box and the provided stylus.

(Note) Please contact us if you are using XSEL-KE/KET/KETX.

Applicable Controllers/Safety category compliant

Compatibility with safety category will be constituted as below. Compliant with up to Safety Category B~4. *1 *2

TB-03

Universal for position controller / program controller
Touch panel teaching pendant TB-03

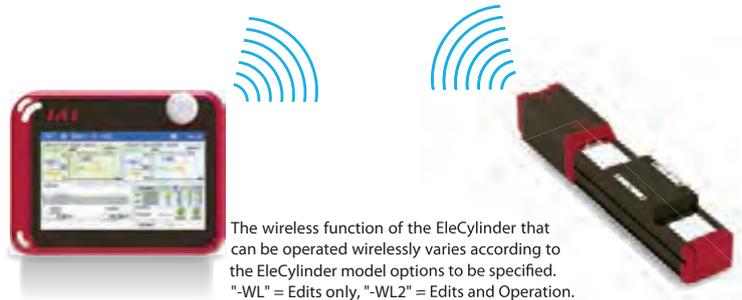

Features

1 Set operating conditions with wireless connection

Position adjustments, operating conditions setting and actuator operations can be performed from outside the equipment, even without a cable connection to the EleCylinder actuators.

* Stop switch is enabled only during "cable connection".
Please be careful that it is disabled during "wireless connection".

The wireless function of the EleCylinder that can be operated wirelessly varies according to the EleCylinder model options to be specified.
"-WL" = Edits only, "-WL2" = Edits and Operation.

2 Status monitoring makes daily maintenance easier and shortens trouble recovery time

TB-03 can monitor the operating status of up to 16 axes while receiving wireless data from the EleCylinder. Error recovery time also can be shortened by troubleshooting with wireless communication.

Status monitor screen

Axis Name Display

Can be configured (changed) arbitrarily according to customer applications.

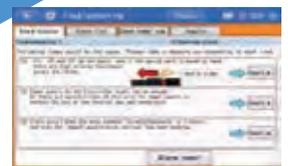

Status Monitor

Axis status check can be used for confirmation of maintenance timing.

EC2 S/N A70761788 Selectable	Servo Cur. pos. 0.00 mm	Travel Cnt. Travel Dist. Over load Lv.	52 1 m 12 %	Alarm Group - Barnin Maintenance warning 1
------------------------------------	-------------------------------	--	-------------------	---

Error Status Monitor

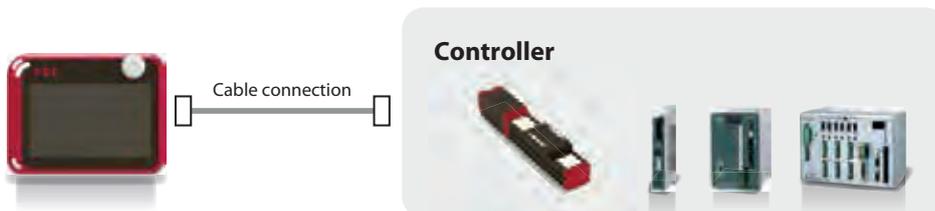

Alarms and warnings are displayed when generated.
Useful for troubleshooting.

Troubleshooting screen

3 Supports EleCylinder / Position Controller / Program Controller

Dedicated cables can connect the TB-03 to all the controllers. The same functions and operations of the previous TB-02 are available.

Wired or wireless of the EleCylinder can be selected at the EleCylinder model option.

TB-03

Model Number

One unit supports all controllers, although the cable must be selected in accordance with the controller to be connected. Select the AC adapter for charging the main unit according to the operating environment.

Model **TB-03** - **Cable** - **AC adapter**

● Body + cable + AC adapter set model

Connected controller	Model		Cable	
	Body + cable	AC adapter	For EleCylinder/ position controller	For program controller
EleCylinder Position Controller	TB-03-C	E	① CB-TB3-C050	-
		N *2		
Program Controller	TB-03-S	E	-	② CB-TB3-S050 + ③ CB-SEL-SJS002
		N *2		
EleCylinder Position Controller Program Controller	TB-03-SC	E	① CB-TB3-C050	② CB-TB3-S050 + ③ CB-SEL-SJS002 (conversion cable) *3
		N *2		
	TB-03-SCN *1	E	-	-
		N *2		

*1 No cable

*2 No AC adapter

*3 Use with the ② cable when connecting to ASEL, PSEL, SSEL, or MSEL

● Connection cable model number

Connected controller	Model
EleCylinder Position Controller	① CB-TB3-C050
Program Controller	② CB-TB3-S050
	③ CB-SEL-SJS002 (conversion cable) *3

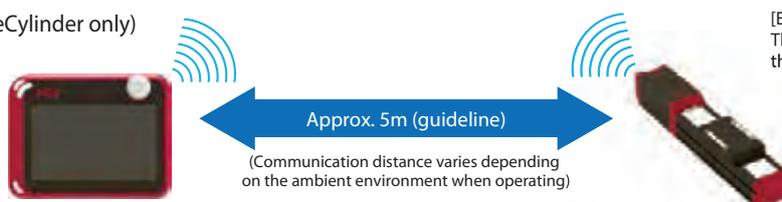

*3 Use with the ② cable when connecting to ASEL, PSEL, SSEL, or MSEL

● AC adapter single product model number

Connected controller	Model	Specification	Single product model number
EleCylinder Position Controller Program Controller	E	For Europe	UNE318-5928

Connection

● Wireless connection (EleCylinder only)

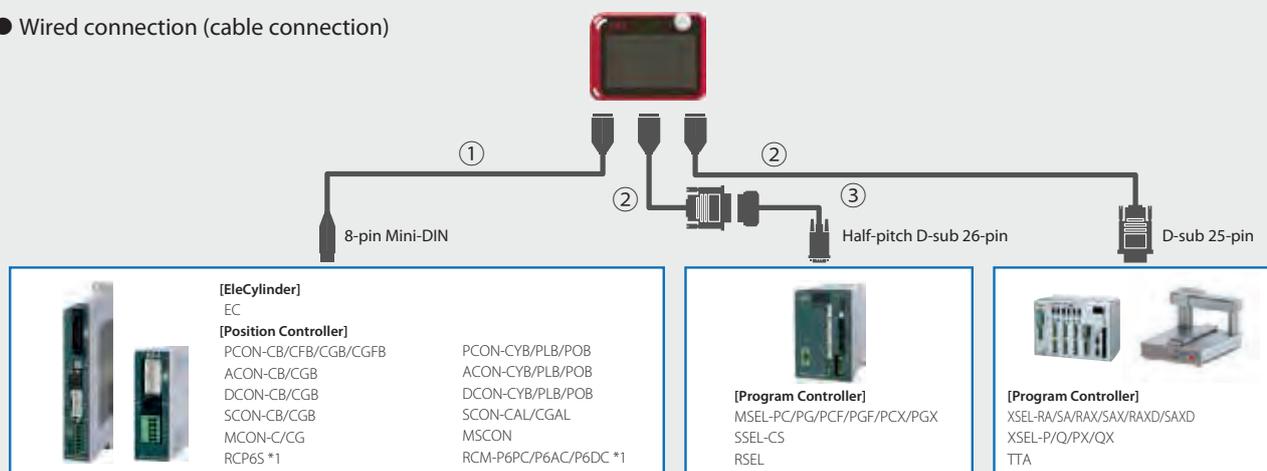

[EleCylinder model and wireless function]
The wireless function varies depending on the model option to be specified.

"-WL" = Edits by wirelessly

"-WL2" = Edits and Operation wirelessly.

Caution: Certification issues limit the countries in which wireless communication can be used. Contact our sales personnel for details.

● Wired connection (cable connection)

*1 To operate RCP6S and RCM-P6, a gateway unit or a PLC connecting unit is necessary.
