THE UNIQUE CYCLO PRINCIPLE

Delivering performance and quality since 1925.

There are essentially four major components in the FINE CYCLO gearbox:

1. Eccentric input shaft
2. Cycloid discs
3. Ring gear (housing)
4. Output shaft

As the eccentric input shaft rotates, it rolls the cycloid discs around the internal circumference of the stationary ring gear. The resulting action is like that of a wheel rolling around the inside of a ring.

As the wheel (cycloid disc) travels in a clockwise path around the ring (ring gear housing), the wheel itself turns slowly on its own axis in a counterclockwise direction.

In the FINE CYCLO system the cycloidal profile around the outer edge of the disc engages progressively with the rollers of the fixed ring gear housing to produce a reverse rotation at reduced speed. For each complete revolution of the high-speed shaft the cycloid disc turns one cycloidal tooth pitch in the opposite direction.

In general, there is one less cycloidal tooth around the disc than there are pins in the fixed ring gear housing, which results in reduction ratios being numerically equal to the number of cycloidal teeth on the disc.

The reduced rotation of the cycloid discs is transmitted to the slow speed shaft by means of drive pins and rollers which engage with holes located around the middle of each disc. The rotation of the cycloid discs is transmitted to the slow speed shaft via the pins and rollers projecting through holes in the cycloid discs.

MOTION CONTROL DRIVES APPLICATIONS

Pre-select the right series for your application.

Compact design

The high reduction ratios, in one or a maximum of two stages, allow for extremely compact designs with a long lifetime. Moreover, due to the different versions available, these gearboxes can be optimally integrated into the machine environment.

Simple installation

The Series A, DA and C gearboxes are lubricated for life in the factory and are completely sealed and are therefore maintenance-free. Convenient and simple motor mounting has been taken into account and is an easy option across all ranges.

Precision gearbox with large hollow shaft bore and high capacity bearing

The E Series, C Series and W Series gearboxes were specifically developed with an extra-large hollow bore inputshaft through which supply lines, shafts, and other media can be passed. The integrated bearings can handle high loads on the output side that may arise when using machine tools, in positioning or during robotics applications.

The right size for every application

The wide range of gearbox series and the many sizes available within each series enables easy selection of the right gearbox for any precision application. Gearboxes with external diameters ranging from 74 mm to 570 mm are available. With these, a range of acceleration torques from below 100 Nm up to 30,000 Nm can be covered. In the event of an emergency stop situation occurring this precision gearbox can even be safely subjected to a load of 60,000 Nm.

High torsional stiffness and low mass moments of inertia

For these application areas, Sumitomo Drive Technologies has developed highly accurate series of backlash-free precision gearboxes. Compared with conventional gearboxes, the construction principle offers the highest torsional stiffness as well as low mass moments of inertia - ideal for highly dynamic tasks.

FINE CYCLO PRODUCTS

Precise. Compact. Durable.

Our world would be very different without automation and robotic applications. Wherever there is a need to move something be it mechanically, automatically or by machine there is a need for a drive.

Differing duty requirements dictate that a drive must have a number of performance characteristics to meet the application. Our range of high precision gear drives allow solutions for the smallest of installation spaces to high torque drives for large systems. The requirements can however be particularly demanding and diverse in the field of factory automation and robotics.

As the inventor of the cycloidal principle, allowing the highest precision, we offer solutions for each and every application with its versatile (FINE CYCLO) zero backlash precision gear drive units.

E CYCLO - (ECY)

Features and advantages.

Highly precise shaft gearing with hollow shaft

Complete set with integrated cross roller bearing and hollow shafts up to 25.5 mm

Important features

- High stiffness
- Lost motion 1.0 arcmin
- Transmission error 0.75 arcmin
- Maximum input speed 8,500 rpm
- Acceleration torque up to 157 Nm
- Radial loads up to 2,050 N
- Axial loads up to 3,000 N
- Fully sealed including cross roller main bearing
- Fully sealed and plug & play version in modular design

A - SERIES (FC)

Features and advantages.

More cost-efficient, high-precision reduction kit

For use in conjunction with the customer's output bearing.
Maximum freedom for installation of specific bearings and for integration into the customer's machine design.

Important features

- Zero mechanical backlash / 1 arcmin lost motion
- 6 sizes
- Reduction ratios 1:29, 1:59, 1: 89, 1:119, 1:179 (availability depends on size)
- Acceleration torque up to 7,610 Nm
- Input speed up to 6,150 rpm
- Torsional stiffness up to 1,100 Nm / arcmin
- Maintenance-free
- Motor mounting with key, clamp ring, or splined input shaft / coupling on request
- Motor adapter on request

A - SERIES (F1C)

Features and advantages.

Unit with high capacity cross roller bearing on output shaft

Combination of zero backlash gearbox and precision cross roller bearing.
 Sizes 45, 65 and 75 provide extremely high support capacity at output shaft.

Important features

- Zero mechanical backlash / 1 arcmin Lost Motion
- 6 sizes
- Reduction ratios 1:29, 1:59, 1:89, 1:119, 1:179 (availability depending on size)
- Acceleration torque up to 7610 Nm
- Input speed up to 6150 rpm
- Torsional stiffness up to 1100 Nm / arcmin
- Maintenance free for life (cross roller bearing regreasing required on sizes 45, 65 and 75)
- Motor mounting with key, clamp ring, or splined input shaft / coupling on request
- Motor adapter on request

C - SERIES

Features and advantages.

Precision gearbox with large hollow shaft

Tapered roller bearing or angular ball bearing integrated directly in the gearbox housing.
Very large hollow shaft for easy laying of cables or similar.

Important features

- Zero mechanical backlash / 1 arcmin Lost Motion
- 6 sizes
- Reduction ratios 1:29; 1:59; 1:89; 1:119
- Acceleration torque up to 6278 Nm
- Input speed up to 4000 rpm
- Torsional stiffness up to 1030 Nm / arcmin
- Maintenance free for life
- Motor connection with belt transmission or spur gear

DA - SERIES

Features and advantages.

Precision gearbox for increased requirements

Angular ball bearings integrated directly in the gearbox housing.
Fully sealed and plug & play version in modular design.

Important features

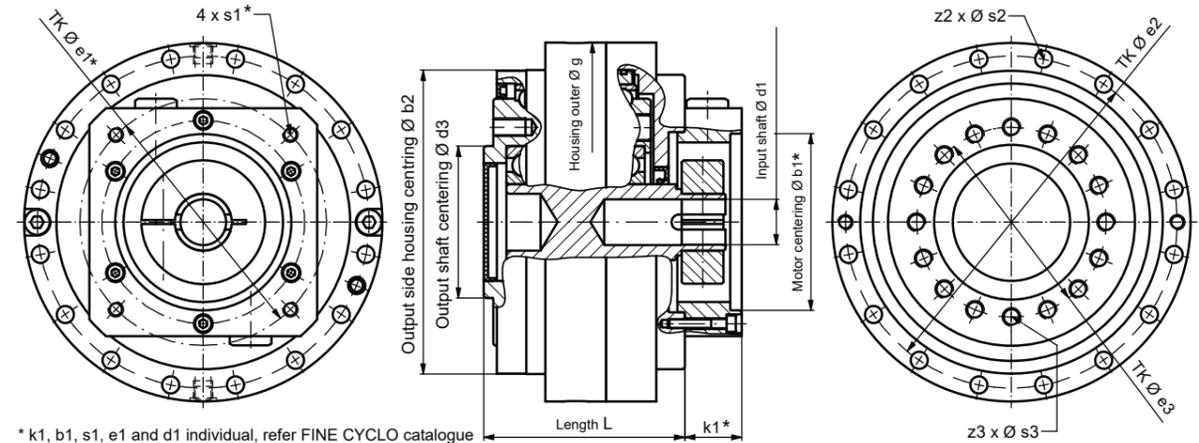

- Zero mechanical backlash / 1 arcmin Lost Motion
- 7 sizes
- Reduction ratios 1:29, 1:59, 1:89, 1:119, 1:179 (availability depending on size)
- Acceleration torque up to 4000 Nm
- Input speed up to 6150 rpm
- Torsional stiffness up to 540 Nm / arcmin
- Maintenance free for life
- Fully sealed and plug & play version in modular design

UA - SERIES

Features and advantages.

Double stage high precision gearbox with advanced bearing design and higher torque

Tapered roller bearing or angular ball bearing for the output shaft integrated directly in the gearbox housing.

Important features

- No mechanical backlash / 0.5 arcmin lost motion
- 8 sizes
- Reduction ratios 1:30 to 1:283 (availability depends on size)
- Acceleration torque up to 30,000 Nm
- Output speed up to 60 rpm
- Torsional stiffness up to 6,000 Nm / arcmin
- Input preconfigured for motor mounting with clamp ring or key and motor adapter
- Fully sealed and plug & play version in modular design

IB - SERIES (P1)

Features and advantages.

The smallest gearbox for precise applications

High torque density unit with angular ball bearings for high load capacity. Adaptable servo motor connection.

Important features

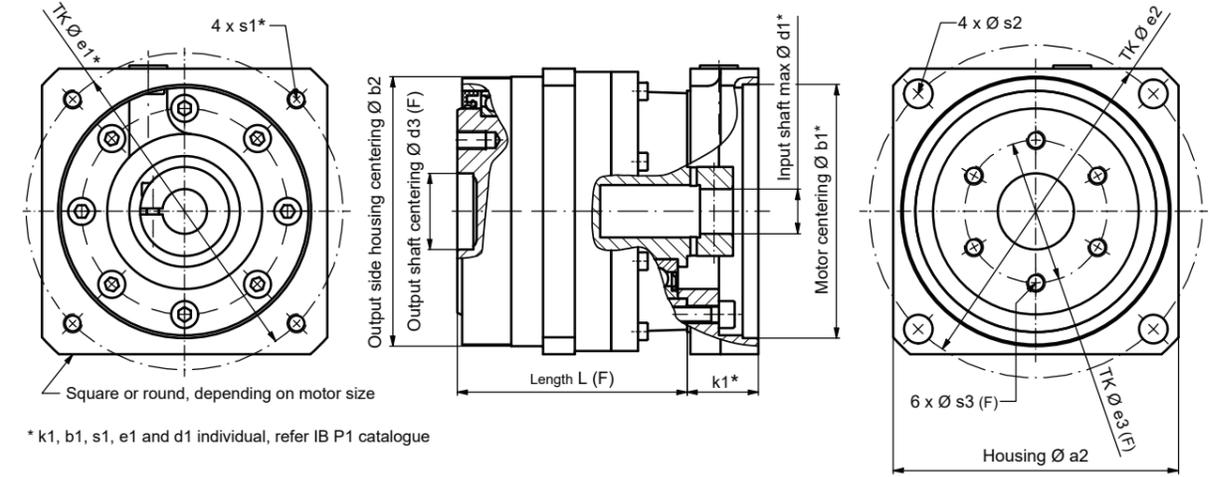

- Mechanical backlash 3 or 15 arcmin
- 3 sizes
- Simple motor assembly with clamp ring
- Reduction ratios from 3.7 up to 81
- Acceleration torque from 35 Nm up to 380 Nm
- Input speed up to 6000 rpm
- Axial / radial load up to 4500 N / 9400 N
- Maintenance free for life
