## W22Xdb Flameproof Motors

The W22Xdb line represents all that is modern in rotating equipment for explosive atmospheres.

As a result of intense research and development, WEG launches its new flameproof motor line, the W22Xdb. Incorporating the same innovative concepts of the W22 general purpose motors, the W22Xdb line is an evolution in the market of classified area products offering high efficiency levels, energy saving, low operational costs, extended lifetime, low maintenance and assured safety!

Learn more about the W22Xdb line including the benefits and advantages for your plant.

## Standards and Classification of Explosive Atmospheres

### ATEX Directives

The ATEX Directives were adopted by the European Union (EU) to simplify free trade between member states whilst aligning the technical and legal requirements for products utilised in potentially explosive atmospheres.

The ATEX Product Directive 2014/34/EU ("ATEX 114"), effective from 20th April 2016 (and replacing the former 94/9/EC or "ATEX 95"), places responsibilities on the equipment manufacturer, whereas the Worker Protection Directive 1999/92/EC - "ATEX 153" (formerly "ATEX 137") places obligations on the end user.

Manufacturers' products must comply with the Essential Health and Safety Requirements for equipment intended for use in potentially explosive atmospheres, and follow a Conformity Assessment Procedure.

This Procedure requires the manufacturer to obtain from a Notified Body ("Ex NB") an EC Type Examination Certificate for the relevant product(s), a Production Quality Assurance Notification (assessed and periodically audited by an ExNB) and the internal production control by the manufacturer to guarantee the products are in compliance with the ATEX Directive.

ATEX compliant products can be easily recognised by the explosion protection symbol  and the  mark certifying conformity with the Product Directive. Directive 1999/92/EC ("ATEX 153") lays down the minimum requirements for improving the safety and health protection of workers at risk from explosive atmospheres, and also classifies the environment into zones and outlines which category of equipment can be used in each zone.

Further, the Directive highlights the responsibilities of End Users to assess potential risks of their workplaces and equipment, prepare an Explosion Protection Document and provide suitable warning signage for areas where explosive atmospheres may occur.

### IECEx System

According to its website, [www.iecex.com](http://www.iecex.com), the objective of the IECEx System is defined as the means "to facilitate international trade in equipment and services utilised in potentially explosive atmospheres, whilst maintaining the required level of safety".

The IECEx System is based on the use of International Electrotechnical Commission (IEC) standards, and is a certification system which verifies compliance to those standards associated with the safe use of equipment in installations where a potential risk of fire or explosion may exist.

Whilst it is voluntary, and differs for example from ATEX (where compliance is mandatory for equipment installed within the European Economic Area), the IECEx System is now accepted in many Countries around the globe, and aims to be the world approval system for electrical equipment intended for installation in potentially explosive atmospheres. Product Certification under the IECEx Scheme requires the involvement of an IECEx Approved Certification Body ("ExCB") to test products and samples according to IEC standards and issue the IECEx Test Report ("ExTR"). Additionally, it is mandatory to comply with a Quality Management System previously assessed to be in conformity with ISO 9001, following the specific Ex requirements of ISO/IEC80079-34.

An IECEx Quality Assessment Report ("QAR") is provided once the results of an on-site assessment of the manufacturer's quality management system has been conducted by the ExCB, and found to be in compliance with the requirements of the IECEx Certified Equipment Scheme and, most importantly, the document IECEx OD 005.

Thereafter, the ExCB will review and endorse the ExTR and QAR and then issue the IECEx Certificate of Conformity ("CoC").

IECEx certificates are issued electronically and are all available for viewing or printing on the IECEx public access website.

## Hazardous Areas

According to the IEC 60079-10-1 and IEC 60079-10-2 standards, the definition of an Explosive Atmosphere is a "mixture with air, under atmospheric conditions, of flammable substances in the form of gas, vapors, dust, fibers, or flyings which, after ignition, permits self-sustaining propagation".

A Hazardous Area is "an area in which an explosive atmosphere is or may be expected to be present, in quantities such as to require special precautions for the construction, installation and use of equipment".

Explosions may occur either due to the transfer of flames or through overheating. For this reason, motors with flameproof protection are constructed in such a way as to prevent propagation of an internal explosion in to the hazardous area in which they are installed.

Hazardous areas are classified through Zones, Groups and Temperature Classes. The classifications according to the International Electrotechnical Commission (IEC) are shown below:

**Classification per Zones:** based upon the frequency of the occurrence and duration of an explosive atmosphere and based on the type of flammable material (gases/vapors or dusts):

- **IEC Zone 0 (gases/vapours) or 20 (dusts)**  
An explosive atmosphere with continuous grade of release
- **IEC Zone 1 (gases/vapours) or 21 (dusts)**  
An explosive atmosphere with primary grade of release
- **IEC Zone 2 (gases/vapours) or 22 (dusts)**  
An explosive atmosphere with secondary grade of release

**Zone 2/22:** area in which an explosive atmosphere is not likely to occur in normal operation but, if it does occur, will persist for a short period only

**Zone 1/21:** area in which an explosive atmosphere is likely to occur in normal operation occasionally

**Zone 0/20:** area in which an explosive atmosphere is present continuously or for long periods or frequently

(not applicable for motors and generators)

**Classification per Groups:** subdivision according to the type of flammable material present.

**IEC Group I:** gases present in underground coal mines (example: methane)

**IEC Group II:** gases present in other explosive atmospheres.

Group II subdivisions:

- **IEC Group IIA:** example: Propane
- **IEC Group IIB:** example: Ethylene
- **IEC Group IIC:** example: Hydrogen

**IEC Group III:** dusts

Group III subdivisions:

- **IEC Group IIIA:** solid particles, larger than 500 µm suspended - combustible dusts
- **IEC Group IIIB:** non-conductive dust, equal or smaller than 500 µm, with electrical resistivity less than or equal to  $10^3 \Omega \cdot m$  - grime
- **IEC Group IIIC:** conductive dust, equal or smaller than 500 µm, with electrical resistivity less than or equal to  $10^3 \Omega \cdot m$  - metallic dust

**Classification per Temperature Classes:** according to the temperature limitation, related to the ignition temperature of the flammable material present, IEC 60079-0 defines the limits for electrical equipment surface temperature for Groups I, II and III.

**Group I - Underground Coal Mines (Methane and Coal Dust)**

Conditions	Maximum surface temperature (°C)*
Where coal dust is not likely to form a layer	450
Where coal dust can form a layer	150

\*On any surface of the enclosure.

**Group II - Gases & Vapours**

Temperature class	Maximum surface temperature (°C)
IEC	
T1	450
T2	300
T3	200
T4	135
T5	100
T6	85

**Group III - Conductive Dusts**

Conditions	Maximum surface temperature (°C)*
With dust layers	Maximum surface temperature of the apparatus must be determined for a given depth of dust layer
Without dust layers	Maximum surface temperature of the apparatus shall not exceed the assigned value. For W22Xdb motors the standard assigned temperature is T125 °C.

\*On any surface of the enclosure.

## Equipment Protection Levels - EPL

In addition to the traditional hazardous area classification of the IEC 60079-10-1 and IEC 60079-10-2, which considers the possibility of an explosion occurring, IEC 60079-0, has introduced a new risk assessment approach known as the "Equipment Protection Level" that considers, besides the hazardous location itself, the consequences of a possible explosion. The primary intent of the EPL is to allow flexibility in the use of equipment in the various zones. For example it may be appropriate to use Gc equipment in a Zone 1 area where the amount of flammable gas / vapour is small and the location is unmanned virtually all of the time. Conversely Gb equipment may be selected in Zone 2 to allow this equipment to be used in the event of a persistent emergency condition. IEC 60079-14 explains in detail how to use EPL's in a risk assessment.

The EPL designations are defined as follows:

### First Indices

M - Mines  
G - Gas  
D - Dust

### Second Indices

a - Equipment having a very high level of protection  
b - Equipment having a high level of protection  
c - Equipment having an enhanced high level of protection

Relationship between Groups, Zones and EPL's are detailed in the table below:

Group	Zone	EPL
Group I	-	Ma
		Mb
	0	Ga
Group II	1	Gb
	2	Gc
	20	Da
Group III	21	Db
	22	Dc

## Protection

As standard the W22Xdb range was designed for operation in hazardous areas classified as IEC Zones 1 and 2, Groups IIA and IIB or IIA, IIB and IIC, Temperature Classification T4 and EPL Gb.

The W22Xdb also offers added protection against combustible dusts, for operation in hazardous areas classified as Zones 21 and 22, Groups IIIA, IIIB and IIIC and EPL Db.

Further, W22Xdb is prepared for operation in underground coal mines, Group I, Category M2 and EPL Mb.

## Markings

The marking of Equipment meets the ATEX Directives and IECEx Scheme.

ATEX marking

ATEX / IECEx marking for explosive gas atmosphere

## Features and Benefits

### Concept

The mechanical design of the W22Xdb line is based on the highly successful W22 general purpose motor range, with the incorporation of some innovative new features, including: modern frame design with new fins and feet to ensure higher mechanical stiffness and excellent heat dissipation; redesigned endshields to reduce bearing operating temperatures thus increasing the re-lubrication intervals; and an advanced cooling system to reduce noise levels and significantly improve heat dissipation.

### Energy Efficiency

Besides relying on the safe operation of the product, users of W22Xdb motors can also reduce their energy consumption and CO<sub>2</sub> emissions due the technology employed and the levels of performance achieved.

The W22Xdb motor line was designed to meet the efficiency levels defined in IEC 60034-30-1. As standard the motors meet the IE2 High Efficiency level, with IE3 Premium and IE4 Super Premium Efficiency available as an option.

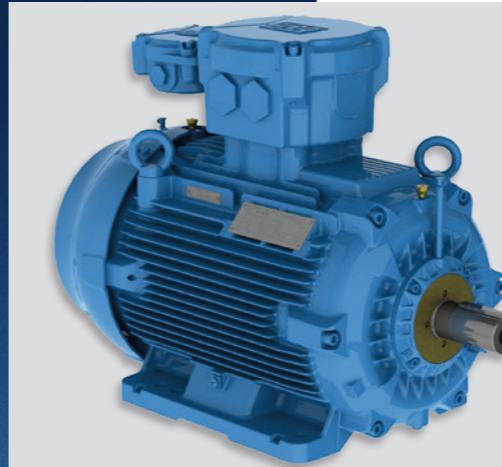

The ratios between rated power, speed and frame size of the new W22Xdb line follow the applicable parts of the IEC Standards 60034 and 60072. This ensures interchangeability with the existing WEG W21 flameproof line and, where replacing lower efficiency motors, offers users the means to achieve a rapid return on their investment.

### Careful Construction

In designing the W22Xdb line, special consideration was given to the needs of Industry to reduce their operating costs.

Aside from the energy saving aspects afforded by these machines, a variety of carefully chosen features were incorporated as standard to ensure maximum performance and durability:

- IP56 degree of protection: an enhanced protection against the ingress of liquid contaminant agents into the motor enclosure.
- Space heaters: prevent accumulation of condensation inside the motor and maintain the winding insulation resistance within acceptable levels, thus prolonging the life of the motor.
- Eyebolts: ensuring safety to operators, offering easy handling, shipment and storage, and allowing the motors to meet specific local standards and directives regarding product lifting.
- Thermal protection: winding thermistors fitted as standard to protect the motor winding in case of overload.
- Paint finish: high performance polyurethane coating (respecting the C3 Medium criteria of the ISO 12944 standard) protects the motor surface even in the harshest of environments.

### Versatility

The W22Xdb line incorporates a comprehensive range options and accessories, enabling them to fulfil a variety of customer specifications without losing the primary focus on the safety of the application.

Among the most widely used accessories are winding or bearing thermal protections, additional terminal boxes for accessories, higher degrees of protection (up to IP66), sintered drain plugs for removal of condensed water, stainless steel shafts / hardware and enhanced painting systems.

W22Xdb motors can be supplied for mounting with feet, flanges or both, in horizontal or vertical orientations.

Specifically for axial fan applications, they can be supplied without cooling fans and fan covers, and with loose leads in lieu of a terminal box.

### Easy Installation and Simplified Maintenance

The W22Xdb concept also focuses on the provision of easier and safer installation and maintenance procedures. Integrally cast feet provide higher mechanical stiffness particularly suited to heavy duty applications, and frames 90 and above feature double drilled holes in order to simplify the replacement and retrofitting of existing motors. Extended lubrication intervals for W22Xdb motors are achieved due to the reduced bearing temperatures, a benefit obtained with the revolutionary motor cooling system, realized in this case by the endshield designs. To further extend bearing lifetime, motors in frame sizes 160 and above are supplied with grease fittings to permit re-lubrication. For all frame sizes, flat areas for placement of accelerometers are provided in both the vertical and horizontal planes, thus permitting easier monitoring of vibration levels. Additionally for motor frame sizes 160 and above, SPM nipples/adaptors are provided as standard.

### Variable Frequency Drives Operation

The use of VFD's is recognized as one of the major driving forces behind energy saving due to their ability to adjust the motor's output to best suit load requirements.

For this reason, W22Xdb motors are equipped with the WISE® insulation (WEG Insulation System Evolution) which permits them to operate with variable frequency drives (VFD's) at voltages up to 690V.

To further enhance their use with VFD's, Insulated Bearings and Shaft Grounding Rings are available.

Additionally, for operation at low frequencies the W22Xdb line can be produced in TEBC versions (with forced ventilation) or fitted with an Encoder<sup>1</sup> for applications which require precise positioning operations.

Due to their outstanding performance, W22Xdb motors are capable of maintaining the T4 temperature class even when driven by a VFD<sup>2</sup>.

<sup>1</sup>) Encoder must be compatible with the hazardous location.

<sup>2</sup>) For VFD operation, output power derating must be considered.

## W22Xdb Products for Hazardous Areas

### Standard Version

- **W22Xdb** - Flameproof motors (Ex db) - suitable for Zones 1 and 2, Gas groups IIA and IIB
- Temperature class: T4
- Certifying body: BASEEFA or INERIS
- Directives / Standards: ATEX / IECEx
- Efficiency level: High Efficiency - IE2 according standard IEC 60034-30-1
- Rated outputs: 0.12 to 370 kW
- Suitable for variable frequency drive operation\*
- Ambient temperature: -20 °C to +40 °C

\*For the application of hazardous atmosphere motors with frequency inverters please contact the nearest WEG office.

### Optional Versions / Features on Request:

- Flameproof motors with increased safety terminal box (Ex db eb) - suitable for Zones 1 & 2, Gas groups IIA and IIB
- Flameproof / Dust Ignition Proof motors (Ex db / Ex tb) - suitable for Zones 1 & 2 / 21 & 22, Gas /Dust groups IIA, IIB / IIIA, IIIB, IIIC
- Flameproof / Dust Ignition Proof motors with increased safety terminal box (Ex db eb / Ex tb) - suitable for Zones 1 & 2 / 21 & 22, Gas / Dust groups IIA, IIB / IIIA, IIIB, IIIC
- Flameproof motors (Ex db) - suitable for Zones 1 & 2, Gas groups IIA, IIB, IIIC
- Flameproof motors with increased safety terminal box (Ex db eb) - suitable for Zones 1 & 2, Gas groups IIA, IIB, IIIC
- Flameproof / Dust Ignition Proof motors (Ex db / Ex tb) - suitable for Zones 1 & 2 / 21 & 22, Gas / Dust groups IIA, IIB, IIIC / IIIA, IIIB, IIIC
- Flameproof / Dust Ignition Proof motors with increased safety terminal box (Ex db eb / Ex tb) - suitable for Zones 1 & 2 / 21 & 22, Groups IIA, IIB, IIIC / IIIA, IIIB, IIIC
- Flameproof motors (Ex db) - suitable for Group I mining
- Flameproof motors with increased safety terminal box (Ex db eb) - suitable for Group I mining
- Temperature class: T5 or T6
- Efficiency levels: Super Premium Efficiency - IE4  
Premium Efficiency - IE3  
Standard Efficiency - IE1
- Ambient temperature: -55 °C to +80 °C
- Certification according TR/CU (EAC Ex), INMETRO, ANZEx, CERTEX, PESO/CCoE, SONCAP, SASO, MASC.

### Meet the Other Members of the W22X Family

#### W22Xeb

Increased safety Level of protection "eb" motors (Ex eb machines)  
For use in areas classified as Zone 1 and 2  
Power ratings 0.18 kW to 250 kW  
Frames: 63 to 355M/L  
Voltage: up to 690 V

#### W22Xec

Increased safety level of protection "ec" motors/dust ignition proof motors (Ex ec/Ex tc machines)  
For use in areas classified as Zone 2 and 22  
Power ratings 0.12 kW to 450 kW  
Frames 63 to 355A/B  
Voltage: up to 690 V

#### Other WEG Industrial Motors for Hazardous Locations

##### Pressurized Motors (Ex p machines)

For use in areas classified as Zone 1 and 2  
Power ratings up to 50,000 kW (other outputs upon request)  
Frames 280 to 1800  
Voltages: up to 13,800 V

#### W22Xtb

Dust ignition proof motors (Ex tb machines)  
For use in areas classified as Zone 21  
Power ratings 0.12 kW to 450 kW  
Frames 63 to 355A/B  
Voltage: up to 690 V

#### W22Xdb High Voltage

Flameproof motors (Ex db/Ex db eb machines)  
For use in areas classified as Zone 1 and 2  
Power ratings 75 kW to 9,000 kW  
Frames 315 to 1000  
Voltage: up to 11,000 V

#### HGF Ex ec

Increased safety level of protection "ec" (Ex ec machines)  
For use in areas classified as Zone 2  
Power ratings 75 kW to 3150 kW  
Frames: 315L/A/B to 630  
Voltage: up to 11,000 V

Please visit us at [www.weg.net](http://www.weg.net) to find out more about WEG hazardous area products.

## Construction Features

Frame	71	80	90S/L	100L	112M	132S/M								
General features														
Certification	ATEX, IECEx													
Nameplate marking	Ex db IIB T4 Gb or Ex db IIC T4 Gb													
Ambient temperature range	-20°C up to +40°C													
Temperature class	T4													
Mechanical features														
Mounting form	Horizontal Foot (IM B3T)													
Frame Material	FC-200 (EN GJL 200) Cast iron													
Degree of protection	IP56													
Grounding	Double grounding - one inside the terminal box and one on the frame													
Cooling method	Totally enclosed fan cooled - IC411													
Fan material	Aluminum													
Fan cover material	FC-200 (EN GJL 200) Cast iron													
Endshields material	FC-200 (EN GJL 200) Cast iron

### Drip Cover Data

Utilization of a drip cover / impact canopy increases the total length of the motor. The additional land length can be seen in table 2 below.

Figure 1 - Motor with drip cover

Frame	Dimension CH (increase motor length (mm))
71	34
80	30
90	44
100	47
112	48
132	59
160	69
180	80.5
200	98.5
225	
250	
280	
315	
355	
315L	99

Table 2 - Additional length with rain drip cover.

### Packaging

#### Frames 71 to 112

W22Xdb motors in frames 71 to 112 are packaged in cardboard boxes (see figure 2), following the dimensions, weights and volumes of the tables 3 and 4.

Figure 2: Cardboard box

Frame	External height (m)	External width (m)	External length (m)	Weight (kg)	Volume (m³)
71	0.32	0.27	0.43	1,34	0,037
80	0.32	0.27	0.43	1,34	0,037
90	0.37	0.30	0.47	2,36	0,053
100	0.42	0.34	0.59	3,61	0,080
112	0.42	0.34	0.59	3,61	0,080

Table 3 - Cardboard box dimensions, weights and volumes for top mounting.

Frame	External height (m)	External width (m)	External length (m)	Weight (kg)	Volume (m³)
90	0.32	0,38	0,47	2,59	0,095
100	0,35	0,41	0,59	4,29	0,085
112	0,35	0,41	0,59	4,29	0,085

Note: Values to be added to the net motor weight.

Table 4 - Cardboard box dimensions, weights and volumes for side mounting.

#### Frames 132 to 355M/L

For frames 132 to 355M/L, the motors are packaged in wooden crates (see figure 3). Dimensions, weights and volumes are in tables 5 and 6.

Figure 3: Wooden crates

Frame	External height (m)	External width (m)	External length (m)	Weight (kg)	Volume (m³)
132	0,45	0,38	0,64	8,25	0,109
160	0,59	0,44	0,88	13,9	0,230
180	0,64	0,47	0,92	14,7	0,278
200	0,70	0,54	0,98	16,9	0,373
225	1,08	0,85	1,25	58,3	1,148
250	1,08	0,85	1,35	62,8	1,239
280	1,30	0,85	1,40	80,7	1,547
315S/M	1,30	0,85	1,55	82,9	1,713
315L	1,30	0,95	1,65	99,3	2,038
355M/L	1,52	1,00	1,80	200	2,738

Table 5 - Wooden crates dimensions, weights and volumes for top mounting.

Frame	External height (m)	External width (m)	External length (m)	Weight (kg)	Volume (m³)
132	0,38	0,49	0,64	9,52	0,119
160	0,45	0,64	0,88	18,4	0,255
180	0,47	0,68	0,92	18,5	0,296
200	0,53	0,72	0,98	19,6	0,376
225	0,78	1,05	1,25	52,9	0,942
250	0,78	1,05	1,25	52,9	0,942
280	0,95	1,10	1,40	76,1	1,463
315S/M	0,95	1,25	1,55	82,8	1,840
315L	1,09	1,24	1,65	101	2,230
355M/L	1,17	1,40	1,85	190	3,030

Note: Values to be added to the net motor weight.

Table 6 - Wooden crates dimensions, weights and volumes for side mounting.
