Crash Dampers

Highly effective aluminium and steel emergency stop systems

As single-use solutions, the robust crash dampers complement ACE's range of safety products. They are made of special aluminium or steel piping that folds by design in the event of a crash, converting the kinetic energy generated into heat.

The tough crash elements efficiently protect structures when incidents occur by evenly absorbing 98 percent of the energy. They deliver great long-term stability in everyday operation and outstanding protection in the event of an emergency stop. All crash boxes are easy to install and replace after a crash. Crash dampers also offer impressive performance for the price.

98 percent energyabsorption

Excellent price-performance ratio

Very sturdy and reliable

Long stroke ensures low reacting forces

Easy to install and replace

High energy capacity

Issue 04.2023 – Specifications subject to change

Crash Dampers

Highly effective aluminium and steel energy absorption elements

Single-use emergency stop dampers

Energy capacity 100 Nm/Cycle to 11.200 Nm/Cycle

Stroke 11 mm to 160 mm

Single-use, yet extremely useful protection: With its crash dampers, ACE offers engineers a single-use solution as a high-efficiency plant safety option. Each crash element, made of custom designed aluminium piping or steel, absorbs even high inertia forces almost instantaneously in the event of an impact. When arranged in series or parallel, the crash elements can absorb even higher energy values at once.

Other advantages of the emergency stop systems developed in sophisticated test series are their simple installation, ease of retrofitting in existing plants, speed of replacement and reduced downtime after a crash. The deformation of the crash box also allows the incident to be reconstructed, ideally helping avoid the same problem in future.

With these benefits, the crash dampers are already protecting many linear axes in robotics applications as well as the limit positions of tool machines, conveyor systems and high bay rack feeders.

Technical Data

Energy capacity: 100 Nm/Cycle to 11.200 Nm/Cycle

Stroke: 11 mm to 160 mm

Energy absorption: 98 %

Max. Reacting Force: approx. 13,000 N to 92,000 N

Operating temperature range: -30° C to + 100° C

Standard colour:
 Umbra grey RAL 7022 (powder-coated):
 Diameter 88 mm

Ruby red RAL 3003 (powder-coated):
 Diameter 38 mm and 63 mm

Zinc-plated: Diameter 20 mm

Alu blank: Diameter 21 mm

Construction size: Diameter 20 mm to 88 mm

Material: Aluminium or Steel

Mounting: In any position

Impact velocity range: Max. 5 m/s

Application field: Emergency stop damping in linear axes, Portal systems, Tool machines, Test stations, Electro-mechanical drives

Note: The single-use damper must be replaced after each impact.

Safety instructions: Where necessary, use thread locking fluid to secure the threaded pins or the fixing screw

On request: Also available with centring pins and other special versions

Crash Dampers

Example CD-88-53 Force-Stroke Characteristic

	Stroke use 28 mm	Stroke use 50 mm
Stroke:	28 mm	50 mm
Absorbed energy:	779 Nm	1,468 Nm
Efficiency:	98 %	98 %
Approx. reacting force max.	40 kN	43 kN

The calculation and selection of the most suitable damper should be carried out or be approved by ACE.

Ordering Example

Type CD-88-145-H
Outer diameter
Stroke
High energy absorption
